SOLUTIONS

# Built for Zero in Multnomah County

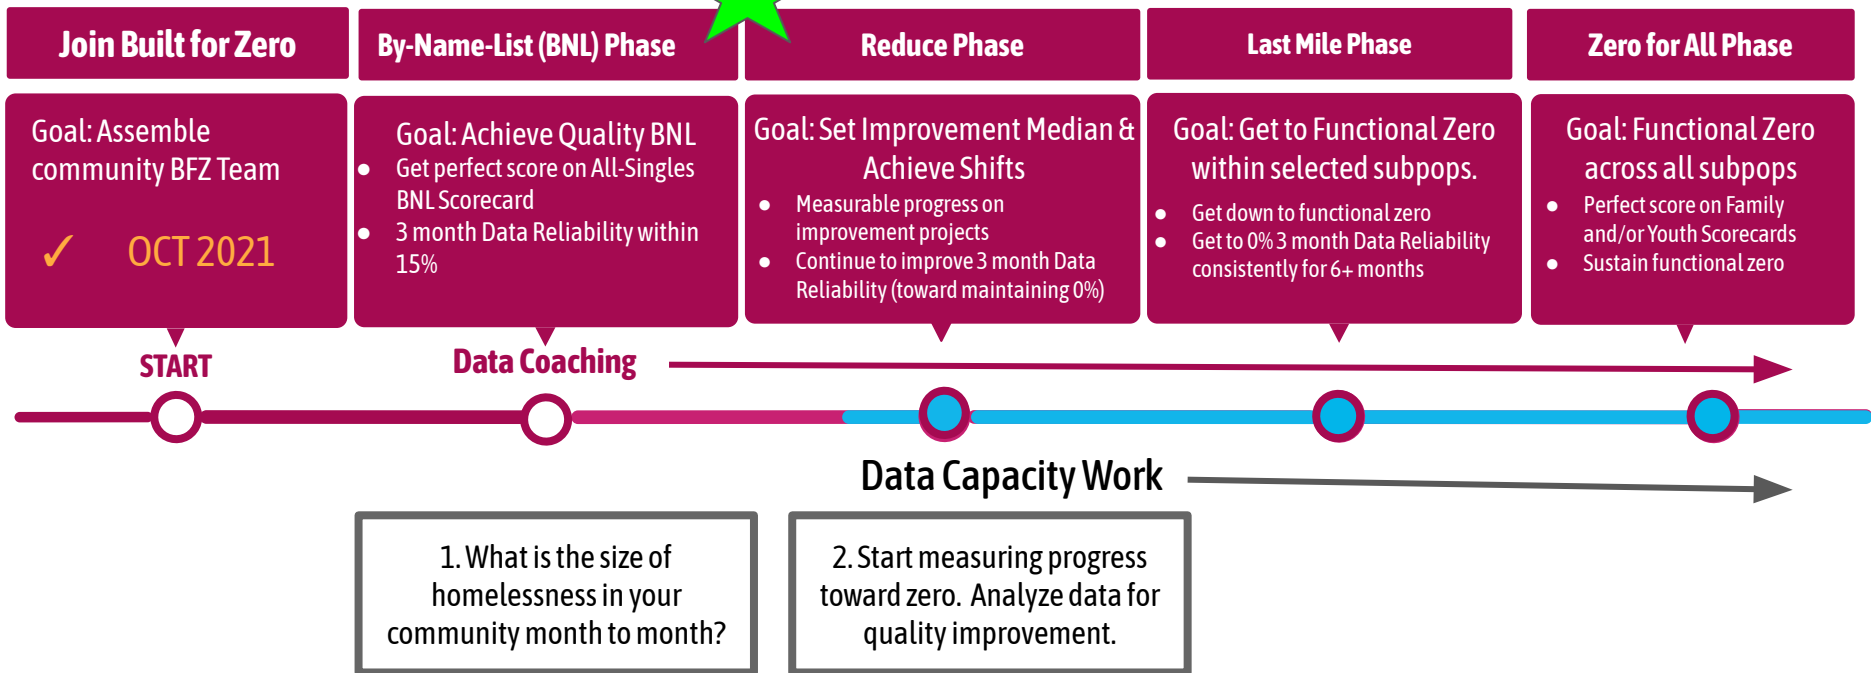

- **Multnomah County Joined Built for Zero in Summer 2021**
- **Over the last year we have worked with Community Solutions to...**
  - ◆ **Map Existing Data into Built for Zero Metrics**
  - ◆ **Form key teams necessary to do the work**
  - ◆ **Perform a comprehensive GAP analysis using Built For Zero tools (the Scorecard)**
  - ◆ **Work with Community Solutions to understand how Built for Zero looks in another communities**
  - ◆ **Worked to address needs identified on Scorecard**

# Multnomah County Built for Zero Update

## BfZ Data Milestones

We are here

# Join Built for Zero

- Create a Core Team : **September 2021**
  - ◆ Community Lead, Data Lead and Community Solutions Lead
  - ◆ Meet weekly to strategize
- Create an Improvement Team: **October 2021**
  - ◆ Multidisciplinary, multi-sector team
  - ◆ Meets regularly to guide policy and project planning
- Participate in Community Solutions Training, with Cohort : **2021-2022**
  - ◆ Comprehensive training, communication with cohorts, and follow up with other cities to understand best practice and likely barriers

# By-Name-List Phase

- **Analyze Data Fidelity: Mapping HMIS to Built for Zero**
  - ◆ **Ensure accurate mapping of HMIS data points to Built for Zero measurements**
- **Measure readiness for a Quality By Name List (the Scorecard)**
  - ◆ **Improvement Team, guided by Community Solutions, completes gap analysis and revisits it regularly**
- **Work toward a Perfect Score/Quality by Name List**

# Data Fidelity Progress:

## Single Adults Experiencing Chronic Homelessness (Population A)

### Fully Developed

**By Name List (BNL):** *We can identify adults in system who qualify as focus population*

**InFlow:** *Newly Identified to HMIS*

Retrospective Data from 12/2021 through 09/2022 to help evaluate data reliability

### Developed, Currently in QA Phase

#### **InFlow:**

##### ● **Newly Identified**

- Chronically Homeless; as a Single Adult (e.g., aging in from Youth)
- Returned from Housing
- Returned from Inactive

#### **OutFlow:**

- Housing Placement
- Moved to Inactive
- No Longer Meets Criteria

# Building Quality By Name List - The Built for Zero Scorecard

- Includes 29 data points
- We have achieved 16
- Scorecard is divided into 2 areas
  - Data Infrastructure (12/15)
  - Data Contribution (4/14)

# Scorecard: GAP ANALYSIS

Built for Zero's framework includes a Scorecard to measure progress towards a Quality By Name List (QBNL) which is divided into two areas:

## Data Infrastructure and Data Completeness

- ❑ Data Infrastructure: Do you have the **technical systems** and **policies** to create a QBNL?

We scored 12/15

- ✓ Multnomah County has the systems needed to produce a QBNL for most populations
  - ★ Information is collected in HMIS for most funded JOHS services
  - ★ HMIS is used to collect data in addition to HUD requirements
- ✓ Current data in HMIS is being mapped with a Community Solutions consultant to ensure data reporting is aligned with BfZ standards
  - **Policies and Procedures to ensure timeliness of data updates need updating**

# Scorecard: GAP ANALYSIS

- ❑ **Data Contribution: Are you collecting data from 90% population experiencing homelessness?**

We scored 4/14

- ✓ **Data is currently collected for Coordinated Entry, in Shelters, in JOHS funded services**
- **Biggest gaps in our data collection are in those experiencing unsheltered homelessness and not engaging in services**
  - ❑ **High proportion of unsheltered homelessness creates unique barriers to data collection**
  - ❑ **Lack of resources (housing) makes data collection more complicated**

# Gaps to reaching a perfect score on scorecard

---

## Filling that gap....

- Updated and coordinated policies
  - What does it mean to be “actively homeless”?
  - What is expected from “outreach coordination”?
- Clear mapping of outreach coverage
- Process for collecting data during outreach
  - What information do we need to collect?
  - What is the best way to collect it?

# Biggest gaps to reaching a perfect score on scorecard

## Other considerations....

- We need a tool to collect data that can be **utilized to help connect people with housing and services**
  - Not Data just for Data's Sake (this is not a PIT count)
  - Needs to be aligned with Coordinated Entry and other Prioritization Processes
    - Can NEVER be a barrier to services or housing
    - Needs to be nimble, simple, and collect information to help us match people with the most effective services

# Key Considerations

---

- Equity Lens: Rushing the process can increase harm, different groups can experience different barriers to information sharing and accessing services
- Involving partner providers and people experiencing homelessness: Policy changes must be responsive to those doing outreach, building trust
- Coordination is central to information sharing and information utilization

# What's NEXT? PLANNED COMMUNITY ENGAGEMENT
