Multnomah County Transportation Capital Improvement Plan and Program Fiscal Years 2014-2018

2015 Update Summary:

The Transportation Capital Improvement Plan and Program (CIPP) is a two-part document:

- 1) the Plan inventories and prioritizes County transportation needs; and*
- 2) the Program matches estimated transportation capital revenue with priority projects for a five-year period.*

The Program component is typically updated biennially to reflect new and completed projects as well as the most current revenue projections. The 2015 Program Update is presented as the last three pages of this document.

The Plan component contains all identified projects to improve motor vehicle, transit, pedestrian and bicycle, and fish passage culvert needs. Using relevant criteria for each type of project, County staff scores all projects. Based on the scoring, available funding, and input from stakeholders, a 5-year Program is developed to schedule anticipated revenue and other sources.

As part of this biennial update, in addition to programming corrections, the update also includes updates to the Willamette River Bridges and Fish Passage Culvert criteria and project list. The revised criteria and subsequent rankings are presented in this 2015 Update and are reflected in the projects on the 2015 Program Update.

Introduction

On May 2013, Multnomah County adopted its Transportation Capital Improvement Plan and Program (CIPP) for Fiscal Years 2014-2018, consistent with guidelines established in the County Comprehensive Framework Plan: Trafficways Policy #32. The Capital Improvement Plan and Program (CIPP) establishes a list of priority transportation improvements deemed necessary to enhance and maintain the County transportation system at acceptable levels, identifies anticipated transportation revenues and other potential funding, and matches these revenues to targeted investments in the transportation system.

A goal of the Comprehensive Framework Plan is to:

Promote and enhance a balanced transportation system that encourages a thriving economy, increases public safety, allows for efficient transportation movement, and protects livable communities through the best possible use of available funds.

Background

The County's network of roads and bridges lies outside the cities of Gresham and Portland, with the exception of the six (6) Willamette River Bridges within Portland. Projects that accommodate

all modes of transportation, motor vehicle, pedestrian and bicycle, and fish passage culvert improvements are considered in the CIPP.

The relative jurisdictional authority of the County and the cities within its boundaries has evolved significantly since the 1980s. In 1985, all roads and streets within the incorporated boundaries of the City of Portland were transferred to the City. Multnomah County, by Oregon law, retained responsibility for the Willamette River bridges. In 1995, Multnomah County transferred many local roads to the cities of Fairview, Gresham, and Troutdale. Multnomah County retained the regional road network outside of Portland. In December 2005, following Oregon legislative action, Multnomah County transferred jurisdiction of all County roads within the City of Gresham to the City of Gresham.

The County currently has jurisdiction over 283 miles of roads located in east and west unincorporated Multnomah County and approximately 27 miles of urban roads in the Cities of Fairview, Troutdale, and Wood Village. It also owns, maintains, and operates six (6) Willamette River bridges – Sauvie Island, Broadway, Burnside, Morrison, Hawthorne, and Sellwood.

Purpose of a Capital Improvement Plan and Program

A current CIPP helps ensure that public funds are strategically invested in transportation projects that provide the greatest public benefit and keep the County's priority projects eligible for state and federal grant programs.

Capital projects improve County transportation facilities where either substantial reconstruction or new construction is required.

Examples of capital projects include:

- Bridge or bridge component replacement
- Road reconstruction
- Extensive guardrail replacement
- Sidewalk construction
- Extensive drainage improvements
- New traffic signals and upgrades to existing traffic signals
- Intersection improvements
- Road widening and the construction of new roadways
- Bikeway construction
- Culvert replacement
- Bridge Corrosion Control

Maintenance projects, such as crack sealing, striping and signing are not funded by the Capital Improvement Program. These activities are funded through operations and maintenance budgets. There are instances where roads developed to current standards require major reconstruction. These are capital projects. The road overlay program and bridge corrosion control are also funded through the capital program.

The CIPP is a two-part document. The Capital Improvement Plan identifies and scores transportation projects needed in the next 20 years. The Capital Improvement Program assigns available revenues to high priority projects for a five-year period.

Capital Improvement Plan

The Plan (Transportation Capital Improvement Plan) is an inventory of transportation capital needs and costs. It precedes the Program (Capital Improvement Program) by rating and ranking projects by priority of need. The Plan uses criteria to evaluate and distinguish Roadway, Bicycle and Pedestrian, Fish Passage Culvert, and Willamette River Bridges priorities from the array of candidate projects.

Capital Improvement Program

The Program implements the Plan by assigning anticipated and available County transportation revenues to candidate projects. The Program is reviewed annually and updated biennially to ensure that limited resources for projects are efficiently and equitably allocated to the most critical capital needs, including where equity can be improved, as well as to leverage County funds. The Program is used by the Transportation Program in preparing its annual Transportation Program budget. Public review of the Program is provided annually through the County's budget process.

CIPP Process

The County road system is dynamic, changing in response to land use decisions and infrastructure life cycles. Consequently, the CIPP must be reconsidered and revised on a regular basis.

Several internal and external means are used to identify transportation improvement projects.

The primary internal source of information is the FY 2010-2014 Capital Improvement Plan and Program. Projects included in the 2010-2014 CIPP that have been completed or are under construction are deleted from the FY 2014-2018 CIPP list. Projects on roads no longer under the jurisdiction of the County, as well as those projects which will be annexed consistent with adopted intergovernmental agreements (e.g., Pleasant Valley Plan District) have been deleted. Other sources of projects include:

- Public recommendations,
- Recommendations from the Multnomah County Bicycle and Pedestrian Citizen Advisory Committee,
- Projects identified through adopted Transportation System Plans in the cities of Fairview, Troutdale and Wood Village
- Projects from the Regional Transportation Plan
- Input from County Maintenance and Engineering staff
- Safety audit reports
- County planning and data management tools, including the County Pavement Management Program, Functional Classification of Trafficways, and the Master Road List
- Projects from the County's Bicycle Master Plan,
- Projects from the County's Pedestrian Master Plan
- Projects from the Fish Passage Culvert Program

These sources identify segments, intersections, and structures on the County transportation system that are hazardous or congested, substandard, incomplete, or in need of reconstruction. The Willamette River Bridges 20-Year Capital Improvement Needs report provides the basis for identifying the needs and projects on the six (6) Willamette River bridges.

In addition to these project sources, the 2014-2018 CIPP list has been updated to reflect the completion of the East Metro Connections Plan (EMCP). The plan, completed in June 2012 identified transportation and other investments that advance economic and community development. Working with the cities of Gresham, Fairview, Troutdale, Wood Village and Multnomah County, the East Metro Connections Plan relied on coordination across jurisdictional boundaries to advocate for results that ensure prosperity of the East Metro area. The final recommendation and action plan identified the needs, transportation mode, function and scope and general location of solutions needed for the area between the adoption of the plan in 2012 and the year 2035. The 2014-2018 CIPP reflects the projects identified in the EMCP.

The capital project needs identified in this Plan total over \$1.8 billion.

Table 1 summarized the capital needs by facility type.

Table 1	
Multnomah County Transportation Capital Improvement Plan Summary	
Arterials	\$175,147,387
Collectors	\$113,548,154
Bridges (non-WRB)	\$20,849,000

Signals	\$20,576,722
Street Design	\$1,950,548
Roadways subtotal	<u>\$332,071,811</u>
Bicycle Facilities	\$119,323,775
Pedestrian Facilities	\$12,539,128
Fish Passage Culverts	\$37,727,186
Willamette River Bridges	<u>\$1,299,995,854</u>
Total	\$1,801,657,754

Capital Project Funding

Capital programming is intended to budget funds over a five-year period to bring portions of each element of the transportation system up to standard. Future year revenues are estimated and allocated to the highest priority capital projects until estimated revenue is fully allocated.

Multnomah County receives its transportation revenue from three (3) primary sources – Federal revenues, the State Highway Fund (state gas tax, vehicle registration fees, and truck weight/mile tax), and a 3-cent County gas tax. Federal sources include the Surface Transportation Program (STP) and Highway and Bridge Program (HBP). The County has chosen to dedicate the STP funds to the rural roads within the County in order to ensure equity in geographic allocation. HBP funds are used solely for the Willamette River Bridge Program for both capital and large maintenance projects.

The County receives State revenues based on the number of vehicles registered in the County. Through revenue sharing agreements, a portion of these funds are given to Portland, Gresham, Troutdale, and Fairview for capital and maintenance projects. The Portland agreement also dedicates annual funding for the operation, maintenance, and capital program for the Willamette River bridges. The County uses the remainder of these funds primarily for maintenance and leveraging outside sources of revenues. As obligated by State law, a minimum of one percent of State Highway revenues are spent on planning, building, and maintaining bicycle facilities and sidewalks on County transportation facilities. In practice, the County spends more than one percent of State Highway revenues on bicycle and pedestrian facilities. Revenues dedicated for the bicycle and pedestrian system are generally used to fund bicycle and pedestrian projects that are unlikely to be associated with a road or bridge capital project. County road and bridge capital projects generally incorporate bicycle and pedestrian elements into the project design, and Roadway and Willamette River Bridges maintenance programs assume the cost of maintaining the bicycle and pedestrian facilities.

Like all public transportation agencies relying on gas tax revenue, Multnomah County is experiencing a dramatic reduction in its ability to maintain its current system of roads and bridges or to invest in replacement or expansion projects. Prior to the 2009 State legislative adoption of the Jobs and Transportation Act, the last state gas tax increase was in 1993. Since that time, the number of vehicle miles traveled in the region has risen by 19 percent, but gas tax revenues only increased by 3 percent. Vehicles have become more fuel efficient, but travelers are no less dependent on a good transportation system.

Since 1993, inflation has increased by more than 50 percent. While fuel prices fluctuate dramatically, the gas tax is flat and has no index to inflation. As a consequence, the County's purchasing power has diminished with inflation. The County's core responsibility to provide a safe environment for the traveling public has been seriously compromised by diminished buying power.

The County has a history of investing heavily in capital preservation. However, over the past few years, funds for road overlays and upkeep have dwindled, and the backlog of deferred maintenance, particularly for roads, is growing at an alarming rate.

In 2009, Oregon passed the Job and Transportation Act (HB 2001) which included an increase in the statewide vehicle registration fee and gas tax and a local option for increased revenues for the Sellwood Bridge replacement. These increased revenues to the state, cities, and counties helped address deferred maintenance and make capital investments. In addition, it

allowed counties in the Portland metro area the option to levy a local vehicle registration fee to fund the Sellwood Bridge replacement. In October 2009, the Multnomah County Board of Commissioners adopted a \$19 annual vehicle registration fee as part of the Sellwood Bridge financial strategy.

Current projections of County revenues from both the state and county transportation funds indicate an improved but limited ability to sustain investments in road and bridge preservation and maintenance and in a limited capital program. County priorities for its transportation revenues are capital debt payments, the road preservation/overlay program, bridge preservation/maintenance, annual allotments for emergency response and safety, and new bridge and road capital projects.

Priorities for capital projects are established through evaluation processes for each of the following facility categories: Road and non-Willamette River Bridges, Bicycle, Pedestrian, Fish Passage Culverts, and Willamette River Bridges. Unique sets of criteria for each facility category are used to evaluate and score projects. County staff uses objective criteria to evaluate and give priority to the array of potential projects. Specific evaluation criteria are discussed under each of the following facility category's capital plan summaries. Of note are recent equity and health criteria added as part of the 2012 update of the Bicycle and Pedestrian criteria. Similar criteria were added to the project criteria for road projects as part of the 2014-2018 CIPP.

Multnomah County Roadways FY 2014-2018 Capital Improvement Plan

The Roadways Capital Improvement Plan establishes a ranked list of road and road-related capital projects necessary to enhance and maintain the County road system at acceptable levels. The County's road projects are evaluated using criteria that address the following:

- Safety
- Multi-modal benefits
- Support of regional 2040 land uses and transportation goals
- Completing gaps in travel corridors
- Demonstrating local community support
- Potential to leverage non-County funding
- Equity
- Health

These criteria are based in part on project selection criteria used by Metro for funding regional projects. The addition of the equity and health criteria reflects inclusion and consideration of these two priorities for both regional and state funding. This aligns Multnomah County urban projects with Metro 2040 Growth Management objectives while still meeting Multnomah County criteria and objectives.

Each potential project is evaluated and scored using the Road Capital Projects Ranking Criteria shown on the following Table 2. Roadway projects are sub-categorized as Arterials, Collectors, (non-Willamette River) Bridges, Signals/Intersections, and Street Design Concept on Table 3. Using the scoring tool, priorities are established for each Road sub-category.

Table 2
Criteria for Road Project Evaluation

Criteria	Criteria Explanation	Points
Safety	Project solves a safety problem once complete. Is there a crash history along the project site? Projects that will mitigate a hazard in locations. Does the project remove conflicts and/or provides safety mitigation for any potential vehicular conflicts? •	Crash history: High – 9, Med – 5, Low – 0 Solves problem: High – 9, Med – 5, Low – 0
Multi-modal benefit	Project adds bike and pedestrian facilities where none exist. Project improves on existing bike and pedestrian facilities built to minimum standards. Project in an identified transit corridor.	20 8 8
2040 Focus Areas (land use)	Project is located in or directly serving a regional center or town center. Project is located in or directly serves an industrial center or employment core. Project serves an activity center (MHCC, Blue Lake Park, Legacy Hospital, K-12 school).	5 5 5
Non-county funding secured	Project secured 50 – 100% of funding from non-county source. Project secured less than 50% from a non-county source.	10 5
Project Support	Project is included in a local plan (transportation system plan, corridor plan, refinement plan, etc.). Project has received citizen support (letters, phone calls, hearings, etc.). Project a local jurisdiction priority.	5 5 5
Completion of corridor	The project complete a gap in a corridor (i.e. is the roadway on either end of segment constructed to county standards.	High-8 Med- 4 Low- 0
Equity	Does the project serve traditionally underserved (minority, low income, limited English speaking, youth, elderly, disabled) communities?	0-5 points
Health	Does this project increase the potential for increased physical activity during every day trips? Does the project help reduce impacts, such as noise, land use conflicts, emissions, etc. Does the project help reduce air toxics or particulate matter? Does the project include multimodal elements (access to transit stops or encourages use of different modes of transportation)? Does the project reduce Vehicle Miles Travelled (VMT)?	0-5 points
Total points possible		104

TABLE 3: Roadways Project Ranking Report

Project #	Project Name	Project Description	Score	Project Cost (\$)	On Bike CIP
ARTERIAL CATEGORY					
Urban					
88	NE 238th Drive: Halsey St to Glisan St	Implement East Metro Connections Plan (EMCP): 3 lanes with multimodal	99	9,000,000	Y
107	Halsey St: 238th Dr.-Historic Columbia River Hwy	Widen Halsey St to 3 lane minor arterial with center turn lane/median, sidewalk and bicycle lanes, consistent with Halsey Street Conceptual Design Plan	89	10,807,290	Y
716	Sandy Blvd: Gresham/Fairview City Limits -- 230th Ave	Reconstruct Sandy Blvd to minor arterial standards with bike lanes, sidewalks and drainage improvements, utilizing recommendations from TGM grant.	82	21,404,633	N
57	Stark St: 257th Ave.--Troutdale Rd	Reconstruct Stark St. to minor arterial standards by widening the existing 2 lanes to provide for 4 traffic lanes, a continuous left-turn lane, bike lanes, sidewalks, and intersection improvements.	79	11,100,000	Y
110	Glisan St: 202nd Ave--Fairview Parkway	Reconstruct northside of Glisan Street to provide multimodal connection between Gresham-Fairview Trail and Salish Ponds Natural Area. Include bike lanes, sidewalks, two travel lanes in each direction per EMCP, and on-street parking. Design green-street treatment for drainage improvements, including Fairview Creek culvert replacement. South side of Glisan St is in Gresham, north is City of Fairview.	76	11,774,421	Y
TBD	238th/242nd/Hogan (I-84 - Powell)	238th/242nd/Hogan (I-84 - Powell): System Management EMCP	59		
TBD	System management: Fairview Pkwy/Glisan/223rd/Eastman (I-84 - Powell)	System management: Fairview Pkwy/Glisan/223rd/Eastman (I-84 - Powell)	54		
101	Scholls Ferry Road: Humphrey Blvd - County Line	Improve Scholls Ferry based on the Scholls Ferry Concept Plan including bicycle and pedestrian facilities.	54	TBD	N
202	Stark St: Troutdale Rd--Hampton Ave	Reconstruct road to arterial standards with 1 travel lanes in each direction, center turn lane/median, sidewalks and bicycle lanes.	42	3,276,450	Y
Rural					
103a	Cornelius Pass Rd: MP 3.0--MP 3.5	Realign and widen Cornelius Pass Road to provide southbound passing lane.	48	35,135,976	N
389	Cornelius Pass Rd: US 30--MP 2	Reconstruct Cornelius Pass Road including passing lane, safety, shoulder and drainage improvements.	42	54,159,714	Y
103	Cornelius Pass Rd: MP 2--MP 3	Widen Cornelius Pass Rd, including new box culvert and passing lane.	38	21,893,536	N
				Arterial Total	156,658,484
COLLECTOR CATEGORY					
Urban					
129	Arata Rd: 223rd Ave- Wood Village Blvd	Construct to 3 lane collector standards with center turn lane/median, sidewalks, bicycle lanes.	96	4,468,201	Y
710	Wood Village Blvd: Arata Rd--Halsey St	Construct extension of Wood Village Blvd as a major collector with 2 travel lanes, center lane/median, sidewalks, bicycle lanes.	78	3,294,764	Y
135	223rd Ave: Halsey St--Sandy Blvd	Reconstruct 223rd Ave to major collector standards with 2 travel lanes, center turn lane/median, sidewalks and bicycle lanes. Requires reconstruction of RR bridge under another project.	76	4,596,717	Y
143	223rd Ave: Sandy Blvd--Marine Dr	Improve 223rd Ave to major collector standards including 2 travel lanes, center turn lane/median, sidewalks, bicycle lanes. Project is a standalone project, though a possible culvert replacement for fish passage could add \$120,000 to cost. Requires replacement of RR bridge not included in this proposal.	70	7,106,182	Y
150	Troutdale Rd: Stark St--northerly 1700'	Reconstruct to major collector standards with 2 travel lanes, center turn lane/median, sidewalks, bicycle lanes. Requires new fish culvert at Beaver Creek.	69	8,556,929	Y
745	Marine Drive Reconstruction	Reconstruct Marine Drive between Interlachen Ln. and the frontage roads in Troutdale.	59	36,764,139	
134	Troutdale Rd: Strebin St--Stark St	Improved to collector standards with 2 traffic lanes, center lane, bike lanes and sidewalks, intersection and drainage improvements.	54	8,446,060	Y
165	Troutdale Rd: 19th St--Cherry Park Rd	Widen to major collector standards with 2 travel lanes, center turn lane/median, sidewalks and bicycle lanes	52	875,155	Y
TBD	Safety corridor: Cherry Park/257th (Cherry Park - Division)	Safety corridor: Cherry Park/257th (Cherry Park - Division)	51		
151	Historic Columbia River Hwy: 244th Ave--Halsey St	Reconstruct to minor arterial standards with 2 travel lanes, center turn lane/median, bicycle 25 lanes and sidewalk. Reconstruction of railroad bridge is not included in this project.	45	16,371,224	Y

Project #	Project Name	Project Description	Score	Project Cost (\$)	On Bike CIP
Rural					
145	Cochran Dr: Troutdale Rd--westerly 2175'	Reconstruct to major collector standards 2 travel lanes, center lane/median, sidewalks, bike lanes, and culvert replacement	45	7,442,765	Y
TBD	Troutdale Rd.: Stark St.-Division Dr.	Reconstruct with 2 travel lanes; construct center turn lane/median, sidewalks, bicycle lanes between Stark and Strebin. Reconstruct Troutdale Rd/Division Dr. intersection including new fish culverts.	44	8,297,000	Y
159	Sauvie Island Rd: Bridge--Reeder Rd	Reconstruct road to rural collector standards with 2 travel lanes. Requires working on dike.	43	8,275,636	Y
TBD	Construct new road north of I-84, Exit 16	Conduct design options alternatives (DOA) study for new connection between Sandy Blvd and Marine Dr. Construct new connector linking industrial sites with I-84.	38	13,000,000	N
149	Sweetbriar Rd: Troutdale Rd--E City Limit	Widen to neighborhood collector standards with 2 travel lanes, sidewalk and bikelanes	31	2,740,748	Y
726	Germantown Rd/Old Germantown Rd	Widen Germantown Rd to create left turn pocket and improve sight distance.	14	780,835	N
Collector Total				131,016,355	
BRIDGE CATEGORY (NON-WILLAMETTE RIVER BRIDGES)					
197	223rd Ave North RR Undercrossing	Reconstruct railroad bridge on 223rd Ave, 2000' north of I-84 to provide wider travel lanes, sidewalks and bicycle lanes.	45	11,534,500	
199	Historic Columbia River Hwy RR Overcrossing: Half mile east of 244th Avenue	Reconstruct railroad bridge to accommodate wider travel lanes, sidewalks and bike lanes.	38	9,314,500	
Bridge Category Total				20,849,000	
SIGNAL/INTERSECTION CATEGORY					
Urban					
TBD	257th/Kane Dr.: Arterial Corridor Management (ACM) w/ Adaptive Signal Timing	Install upgraded traffic signal controllers, establish communications to the central traffic signal system, provide arterial detection and routinely update signal timings. Provide real-time and forecasted traveler information.	63	2,800,000	N
TBD	238th/242nd Ave/Hogan Dr.: ACM with Adaptive Signal Timing	Includes the ACM project with signal systems that automatically adapt to current arterial that automatically adapt to current arterial roadway conditions.	57	3,600,000	N
TBD	Fairview Parkway: Arterial Corridor Management (ACM)	Install upgraded traffic signal controllers, establish communications to the central traffic signal system, provide arterial detection and routinely update signal timings. Provide real-time and forecasted traveler information on arterial roadways.	42	850,000	N
744	Scholls Ferry Rd/Patton Rd	Improve safety and reduce delay at intersection. Improvements will include ADA curb ramps, signals with permissive/protective phasing	41	450,000	
Rural					
193	Cornelius Pass Rd/US 30	Widen pavement to allow for north bound left turn lane, right turn lane and bicycle lanes.	42	1,642,529	Y
706	Orient Dr/Bluff Rd	Widen Orient Dr to create eastbound left turn lane to Bluff Rd, realign Bluff and Teton to create perpendicular intersection.	20	685,247	N
703	Orient Dr/Dodge Park Blvd	Widen Orient Dr to create eastbound left turn lane.	17	373,616	N
147	Corbett Hill Rd: Historic Col. River Hwy	Improve intersection alignment by making stops at right angle.	15	3,770,920	N
707	Oxbow Dr/Altman Rd	Widen Oxbow Dr to create westbound left turn lane to Altman Rd, realign intersection to a 5 perpendicular intersection.	15	790,693	N
704	302nd Ave/Lusted Rd	Realign Lusted Rd and Pipeline Rd to create perpendicular intersection @ 302nd, add left turn lane to each leg of intersection.	10	5,613,717	N
186	Division Dr/Troutdale Rd (Included in Collector project above)	Realign intersection, eliminating NE leg, producing a 4-way intersection. Replace 3 existing culverts identified as fish barriers.	5		N

Multnomah County Bikeway and Pedestrian Program FY 2014-2018 Capital Improvement Plan

The Multnomah County Land Use and Transportation Program has a long-term program to develop and maintain a balanced transportation system that includes sidewalks and bike lanes on urban arterials and collectors, and shoulder bike and pedestrianways on rural roads. Policies for bicycle and pedestrian facilities are established in the Multnomah County Comprehensive Framework Plan. The Land Use and Transportation Program spends more than the one percent minimum of its State Highway revenue on bikeway or pedestrian projects. These expenditures comply with ORS 366.514, which mandates expenditures of a minimum of one percent of State Highway revenues on bicycle and pedestrian facilities.

If a roadway project includes a planned bikeway or sidewalk, the bike and pedestrian facilities are constructed as part of the roadway project. Bicycle and pedestrian priorities that will not be constructed by a roadway project or other program in the near future are programmed through the Bikeway and Pedestrianway capital plans. Examples are sidewalks gaps, separated bike paths in the road right-of-way, cyclist activated traffic signals, major shoulder construction, and bridge modifications. Bikeways or pedestrianways that can be created by striping roads and signage (such as designating bicycle lanes or routes) are funded through the maintenance budget.

In selecting Bicycle and Pedestrian system projects, the County uses a careful process of addressing critical needs and maximizing funding opportunities. Candidate projects are evaluated by category, bicycle or pedestrian, using objective criteria. Information used in evaluating a project addresses the following factors:

- Safety
- Completing gaps or compliments other system projects
- Cost effectiveness
- Proximity to school and other public destinations
- Lack of road project to address the need
- Equity
- Health

Each potential project is evaluated and scored using the ranking criteria shown in the following Table 4. Using this scoring tool, priorities are established for bicycle system and pedestrian system investments, in Tables 5 and 6.

Table 4
Criteria for Bicycle and Pedestrian Project Evaluation

Criteria	Criteria Explanation	Point Range
Safety Improvement	Project solves a safety problem once complete. Is there a crash history along the project site? Projects that will mitigate a hazard in locations. Does the project remove conflicts and/or provides safety mitigation for any potential vehicular conflicts?	<i>Crash history:</i> High – 9, Med – 5, Low – 0 <i>Solves problem:</i> High – 9, Med – 5, Low – 0
Cost Effectiveness	What is the cost/benefit of proposed project? Projects that provide the most new infrastructure for the least cost will receive the highest scores.	High – 12 Med – 6 Low – 0
Project Utility	Project serves a need/be well used once it is complete. Project improves access to priority destinations mixed use centers, large employment areas, schools, and essential services. Projects located in high or potentially high pedestrian/bicycle traffic areas will receive top scores. Projects that are located in high transit use areas or that improve access to transit will receive higher scores.	High – 15 Med – 8 Low – 0
Closes Gap in System	Project completes a gap in the systems; compliments adjacent facilities (stormwater management); significantly improves an existing facility that is well-used. Projects that significantly help to complete a pedestrian or bicycle corridor will receive top scores.	<i>Completes gap:</i> High – 8, Med – 4, Low – 0 <i>Compliments other facilities:</i> 0 – 4 <i>Improves existing facilities:</i> 0 – 4
Compliment Recent or Future Project	Project compliments or enhances a recently completed or near-term future project (including leveraging). Project that have benefit to phases of completed or future projects. Projects located in close proximity to other recent or planned bicycle or pedestrian enhancements will receive top scores.	High – 8 Med – 4 Low – 0
Proximity to Schools	School is adjacent to the project area. Project must be directly adjacent to a school to receive the points.	Yes – 5 No – 0
No Other Project	Will another project address all or some of the problem? Projects will receive all 5 points if no other projects planned for the area will address bicycle or pedestrian concerns.	0 to 5 points
Feasibility	Factors exist within or outside the scope of the project that make it impractical. Projects receive negative points if concerns about right-of-way, topography, or construction timing make them impractical.	<i>ROW/Topography issues:</i> -3 – 0 <i>Construction timing issues:</i> -3 – 0
Equity	Does the project improve access to priority destinations mixed use centers, large employment areas, schools, and essential services for Environmental Justice/underserved communities? Does the project serve traditionally underserved (minority, low income, limited English speaking, youth, elderly, disabled) communities?	0-6 points
Health	Does the project help reduce impacts, such as noise, land use conflicts, emissions, etc. Does the project help reduce air toxics or particulate matter? Does the project include multimodal elements (access to transit stops or encourages use of different modes of transportation)? Does the project reduce Vehicle Miles Travelled (VMT)? Does the project provide access to “essential services” (parks, trails, centers, recreation, etc) within a 1 mile walk or bike ride?	0-6 points
Bonus	Points will be awarded for alternate sources of money (-2, +2), project readiness (-2, +2) and community support (-5, +5).	-9 - +9
Total points possible		100

 East Multnomah County

Multnomah County Fish Passage Culvert Program

Oregon Fish Passage Statute of 2001 (ORS 509.580-.910) states that fish passage shall be addressed in locations where fish are currently or were historically present. The fish passage rules apply to 119 in-stream culverts owned by Multnomah County. These culverts are located in fish-bearing reaches of streams in unincorporated County, and many are located in stream reaches that are habitat for fish species on the federal Endangered Species List. The Endangered Species Act mandates fish barrier removal, citing that man-made fish barriers are considered part of the “take” prohibition, where, a “take” refers to the harm, harassment, or other activities that reduce the species. The County Fish Passage Culvert Program addresses the concerns of fish barriers by identifying and prioritizing culvert replacement for fish passage for endangered fish and other native aquatic species.

The fish barrier culverts under Multnomah County’s jurisdiction are located in the following seven sub-basins:

- Tualatin Watershed - a sub-basin of the Willamette River
- Tributaries of the Willamette River - a sub-basin of the Columbia River
- Johnson Creek Watershed - a sub-basin of the Willamette River
- Fairview Creek Watershed - a sub-basin of the Columbia Slough
- Beaver Creek Watershed - a sub-basin of the Sandy River
- Sandy River Watershed (excluding the Beaver Creek Watershed) - a sub-basin of the Columbia River
- Tributaries of the Columbia River Gorge

Stream Passage Design

Characteristics of typical fish passage barriers include: 1) outfall water drop heights that are too high for the fish to jump, 2) flat concrete box culvert bottoms that make the flows too shallow, or 3) water flows that are too fast for fish to swim against. The Oregon Department of Fish and Wildlife (ODFW) fish passage requirements (OAR 635-412) defines the triggers that require fish passage restoration as well as the design criteria for fish passage structures. Fish passage designs must allow the upstream migration of 6 inch trout, as a reference. The bottomless “stream simulation” structure (approximately 2 times wider than the stream width), or a hydraulic culvert design (using baffles and weir structures to create jump pools within a culvert), are allowed per the fish passage criteria depending on the context in which stream is sited.

Community Partners and Funding Sources.

The County partners with many public agencies and watershed entities to address the liability identified by the culvert inventory. Partners help identify restoration needs and priorities, and help leverage funding opportunities. While the County maintains a capital budget for fish barrier removal, additional grants funds are desirable to share the financial burden and also develop stronger ties of a project to the community. Potential community and financial partners include Oregon Watershed Enhancement Board, ODFW, Congressional Representatives, National Oceanic and Atmospheric Administration, Army Corps of Engineers, Metro, local municipalities, local Soil & Water Conservation Districts, non-profit restoration organizations, and watershed councils.

Culvert Prioritization Criteria

Fish passage prioritization criteria have been updated for the 2019-2023 Capital Improvement Plan (CIP) to reflect new science. Since the previous CIP was issued, new culvert assessments, prioritization tools and mapping tools have become available, and these have been incorporated into a new logic for how the County will address fish barriers. New criteria for fish passage prioritization are summarized in Table 1.

The previous CIP prioritization relied on a “score and rank” method, using a cumulative score from a number of weighted criteria to create a single priority list. This method had particular limitations based on the method design and the data that was used in it. The previous method did not effectively consider the spatial structure of barriers in a stream network. That is, the method did not consider the effect of multiple barriers on fish passability and how that changed as fish passage was restored in the watershed. The previous method also relied on a qualitative assessment of fish passability by fish different biologists, which was not a reliable or comparable criterion for evaluation. The qualitative scoring of the “environmental” metrics (i.e., riparian vegetation quality, shade, bank stability, etc) also was not clear.

During the past 10 years, the amount of local funding and resources for invasive weed removal and native plant restoration in the riparian area has increased considerably. Many streams in the unincorporated County are under some restoration program. Given that riparian conditions are generally expected to increase by the end of the CIP planning period, it is prudent to reconsider whether this is a meaningful scoring consideration.

Using current environmental metrics to prioritize fish passage is challenging for other reasons. Recent local fish data¹ have shown that water quality analogs (e.g., high summer temperatures) and riparian vegetation condition may be poor indicators of fish populations. Fish passage improvement may also serve as a catalyst for other watershed health improvement by private landowners. Urban stormwater and agricultural runoff may also effect stream biota is different ways. Given these concerns, the updated CIP program prioritizes fish passage restoration independently from habitat and water quality. The “environmental” criteria used to score culverts in the previous CIP list were eliminated in this updated prioritization.

New criteria

In 2013, the degree of passability at each culvert was assessed on fish-bearing stream reaches using quantitative surveying methods and fish passage guidelines from Washington and Oregon. This assessment resulted in a quantitative understanding of how each culvert poses a barrier to fish. This also eliminated the subjectivity in barrier identification as a result of multiple qualitative field evaluations by fish biologists.

Fish passability information is important because the degree of passability is the key in understanding how multiple barriers effect fish passage in a stream network. Rather than considering each barrier independently, ignoring the spatial structure of the barrier network, we assess the “cumulative passability” – defined as the product of the passability (%) and the length of habitat upstream of a culvert (ft) - to assess the effect of all culverts is considered in a watershed.

¹ Portland Water Bureau Habitat Conservation Plan smolt trap program for the Sandy River Basin (2014); Multnomah County Fish Surveys of Beaver Creek (2011) and Johnson Creek (2012); Mt Hood Community College Fisheries Program Adult Salmon Spawning data (2012-2014).

This “cumulative passability” information is, in turn, fed into a “fish-passage optimization model”² to prioritize fish passage to maximize the amount of accessible habitat in the stream network for a given budget. Cumulative passability is assessed by watershed.

Table 1. Prioritization criteria summary

<i>Criteria</i>	<i>Description of factors</i>
Cumulative passability	Length of stream habitat upstream of the fish barrier culvert
	Degree of fish passability (%) based on Washington and Oregon fish passage standards
Equity	Regional concern – support subsistence fisheries by increasing habitat for salmon species
	Local concern – reduce risks of flooding; improve local stream health including habitat for resident cutthroat trout and other native fishes
Condition	Ratings (good, fair, poor, very poor) are based on qualitative assessments of channel, culvert and embankment structure
Retrofit opportunity	Installation of baffles to improve fish passage in culverts as a short term measure for applicable culverts
Partnerships	Sequencing projects with adjacent culverts with public or private partners if the habitat gains are not significant by a single project alone.

The notion of “equity” is another new criterion in the CIP. Equity manifests in two ways; first, as a regional scale concern, and second, as a local scale concern. As a regional scale concern, we consider the equity implications of subsistence fishing; that is, to increase the numbers of catchable salmon by restoring fish passage in streams reaches that have the highest potential to increase those populations of fish. As a local concern, we consider the equity implications of local flooding concerns (where a culvert failure may lead to flooding) and the recovery of local watershed function and use by other native fishes (e.g., native cutthroat trout). Equity is used in the prioritization as a way to sort culverts based on community need, which is a way to integrate the goal of the Federal Clean Water Act to have “fishable” streams, and to prioritize streams with Federal Endangered Species listings (i.e., coho, Chinook, steelhead populations).

The CIP considers three additional factors: 1) the physical condition of a culvert (which increases the risk of failure); 2) opportunities created in partnership with other jurisdictions or entities (both public and private); and 3) opportunities for retrofits, as a short-term low-cost solution to improve fish passability for culverts not in need of immediate repair. These factors are important for the timing and sequencing of barrier removal.

Capital Improvement Program Priority List

Fish barrier culverts in the updated CIP are separated into two sections to distinguish those that represent a regional level concern, and those that represent a local level concern (Table 2 and 3). The culverts are organized further by watershed and ordered in the highest benefit to cumulative

² Anadromous Fish **P**assage Optimization Tool (APASS Beta Version 0.8) is an optimization software tool developed by Dr. Jesse O’Hanley, University of Kent, UK (Copyright 2011).

passability, which were identified using the fish barrier optimization tool³. The condition, estimated cost of replacement (or retrofit), length of upstream habitat, and passability for fish are also presented. Some culverts are identified as good candidates for retrofits because of their condition and fish barrier type, and some others are identified as needing partners to properly sequence projects. These characteristics are used to determine the 5 year priority list. Priorities were given to specific culverts based on a combination of their characteristics and location in the watershed. Culverts of regional concern were given priority over those of local concern, unless the latter were affordable retrofits, or otherwise had major benefit in the watershed.

Priority was not given to culverts of regional concern that had a relative high cost of replacement and were located high in the watershed. Culverts that were adjacent to another jurisdiction's culvert were not given priority because of the lead time needed to coordinate projects. Many culverts that are important as a local concern, but do not pass Endangered Species were not given priority at this time.

Maps of culverts are found in Figure 1 and 2.

³ Non-barrier culverts in "very poor" conditions were included in the prioritization because of the risk of failure which could block fish passage. Models were run as if these were complete barriers (0% fish passage).

Multnomah County Willamette River Bridges Capital Improvement Plan (2015-2034)

This section of the plan addresses the capital needs of the six (6) Willamette River Bridges: Sellwood, Hawthorne, Morrison, Burnside, Broadway, and Sauvie Island. With the exception of the Sauvie Island Bridge, these bridges are located in the City of Portland and provide regional connections between the east and west sides of the metropolitan area. As part of the 2015 CIPP Update, the recently completed Willamette River Bridges Capital Improvement Plan was incorporated. The excerpts from the plan below are incorporated into the County CIPP. The full Willamette River Bridges Capital Improvement Plan is available as a separate document, and provides more details on the projects.

Purpose: This Multnomah County Willamette River Bridges Capital Improvement Plan (Bridge CIP) identifies a 20-year program of necessary capital projects and associated funding needs to maintain and seismically retrofit the County's iconic Willamette River bridges (Broadway, Burnside, Hawthorne, Morrison, Sauvie Island and Sellwood) for the period 2015-2034. These bridges connect the community and currently serve approximately 200,000 people daily. As of 2014, the County's four historic movable bridges lack the necessary seismic resiliency to withstand moderate to major earthquakes. This is especially true for the anticipated Magnitude 9.0 Cascadia Subduction Zone event that the Oregon Department of Geology and Mineral Industries has calculated as having a 37% chance of occurring before 2065.

Bridge CIP Objectives: The Bridge CIP meets the following objectives established by Multnomah County:

- Provide a rational basis for identifying and prioritizing capital projects.
- Establish criteria for informing program and project selection decisions.
- Provide collaborative public and stakeholder input for criteria selection.
- Identify needs, projects and costs to maintain the bridges to identified performance standards.
- Conduct a seismic evaluation to support programmatic rehabilitation needs, projects and costs.
- Develop a comprehensive understanding of the current condition of the six bridges.
- Assess life cycle and capital maintenance needs for key mechanical, electrical and structural systems and paint.
- Obtain Board of County Commissioners (BCC) input and approval for the Bridge CIP.

Results: The Bridge CIP identifies 56 capital projects with a total cost of approximately \$1.3 billion. The Bridge CIP provides an action plan for 2015-2034 resulting in the following outcomes:

- Dependable bridge operation
- Safe and reliable river crossings
- Enhanced seismic resiliency
- Integration of Multnomah County's Equity Lens in decision making processes (see Section 3.2.2)
- Alignment with Multnomah County's Climate Action Plan

Costs for the projects account for inflation to a programmed year of expenditure. Each capital project is planned within a specified 5-year time interval, as summarized in **Table 1**.

Table 1 – Summary of Project Costs by Target Time Interval

Target Time Interval	Number of Projects	Cost at Target Time Interval for Construction
2015-2019	10	\$125.43 million
2020-2024	16	\$130.23 million
2025-2029	12	\$877.48 million
2030-2034	18	\$166.85 million

Bridge CIP costs summarized by bridge complex are shown in **Table 2**.

Table 2 – Summary of Project Costs by Bridge Complex

Bridge Name	Number of Projects	Cost at Target Time Interval for Construction
Broadway	14	\$212.16 million
Burnside	4	\$546.92 million
Hawthorne	12	\$195.40 million
Morrison	13	\$236.05 million
Multiple	6	\$104.08 million
Sauvie Island	4	\$3.93 million
Sellwood	3	\$1.45 million

Figure 1 – Multnomah County Downtown Portland Bridges

Bridge CIP costs summarized by primary work category are shown in **Table 3**.

Table 3 – Summary of Bridge CIP Costs by Primary Work Category

Primary Work Category	Number of Projects	Cost at Target Time Interval for Construction
Accessibility	6	\$43.37 million
Driving Surface	5	\$32.99 million
Electrical and Lighting	9	\$26.26 million
Mechanical	6	\$39.62 million
Paint	11	\$288.96 million
Seismic	6	\$705.47 million
Structural	13	\$163.33 million

Performance Attribute Criteria Assessment and Ratings

In addition to considering cost, the prioritization process considered how each project bundle rated against ten different performance attribute criteria that were derived from the County's values. Projects were rated, receiving scores that ranged from -3 (poor performance) to +3 (excellent performance), and every project was evaluated at each five-year time interval. The scores at each time interval were then compared to the score based on the bridge's existing condition, resulting in a PerfD value (see **Section Error! Reference source not found.** for definition), a value that was a component of the **Importance Factor** calculation. The larger the PerfD score, the higher priority the project has. The following ten performance attributes were established for the project (in alphabetical order):

- **Emergency Preparedness** - An assessment of the structure's ability to resist anticipated seismic and flood events.
- **Livable Communities** - An assessment of how the improvement promotes a multimodal community including bicyclists, transit users and pedestrians (Americans with Disabilities Act (ADA) compatibility) to encourage a more livable and healthy community.
- **Maintenance** - An assessment of the long-term maintenance needs and the safety of maintenance and operations staff. Maintenance considerations include the overall durability, longevity and maintainability of roadway surfaces. It also includes the accessibility and safety considerations for maintenance personnel.
- **Movable Operations** - An assessment of the project's ability to maintain bridge movable operations for all modes.
- **Regional Alignment** - An assessment of how well the projects align with adjacent partner agency CIP projects and regional plans, including those for emergency preparedness. (Note: Considers input from the stakeholder engagement process.)
- **Social Justice** - An assessment of project impacts on services for traditionally underserved communities (minority, low income, limited English speaking, youth, elderly, and disabled). Services include schools, social services, faith-based organizations, community centers, police/fire/justice and food options).
- **Structural Integrity** - An assessment of the structural condition of the bridge based on assessed condition. Projects include paint system rehabilitations that have the ability to preserve the structural condition of the various steel members.
- **Sustainability** - Assessment of the project's influence on: (1) the long-term economic well-being of the region; (2) the long-term environmental well-being of the vicinity adjacent to the bridges; and (3) the preservation of the historic and iconic nature of the bridges.
- **Traffic Operations** - An assessment of the operations of motor vehicles, freight mobility, and congestion reduction.
- **User Safety** - An assessment of multimodal (including river traffic) safety on the bridge complex and its approach roadways. Safety considerations include horizontal and vertical geometric configurations, merging or weave distances, design speeds,

sight distance, lane and shoulder widths, traffic and safety lighting, vehicle or vessel snagging, barrier rail systems and roadway conditions.

Capital Projects Summary – ALL BRIDGES, ALL PROJECTS							
Project Rank	Bridge Name (s)	Project Name	Primary Work Category	Project ID #	Importance Score	Target Construction Time	Total Cost at Target Construction Time

Multnomah County Capital Improvement Plan & Program 2010-14
 Willamette River Bridge Projects
 Public Review Draft

— Bridge Projects

FY 2014-2018 Transportation Capital Improvement Program

The Transportation Capital Improvement Program has been developed to implement the capital plan. Where the Capital Improvement Plan identifies and scores 20-year project needs for Multnomah County's transportation system, the Capital Improvement Program identifies anticipated revenue and schedules projects for construction for a 5-year period.

Constantly changing community needs will alter County transportation program priorities over time before all projects can be constructed. The Transportation Capital Improvement Program is reviewed by the Land Use and Transportation Program staff on an annual basis and full reviews with public input biennially. The 2014-2018 CIPP is based on the best available revenue and cost information and by clear and objective means, establishes a strategy for addressing the highest priority transportation needs for fiscal years from 2014 to 2018.

Projects with the most critical need and fewest development constraints were programmed for priority development. The total cost of projects in the Program update is \$76.4 million, excluding the Sellwood Bridge. The County's transportation capital funding capacity for these projects is projected at approximately \$61.3 million, based on projected revenues and secured external funds.

The County attempts to leverage external funds whenever possible. Partially-funded projects are those where some funds are available but are insufficient to complete the project. County staff has identified potential sources to leverage and has committed County transportation revenues for that purpose. In addition, funds are set aside to cover other expenses -- remedying safety concerns, repairs, ADA improvements, leveraging private development activities, etc.

Since the 2012 Update of the 2010-2014 CIPP, Multnomah County has received state and regional grants awards for road, bicycle and pedestrian projects, including Arata Road pedestrian and bicycle facilities, and additional state Jobs and Transportation Act funds for Cornelius Pass Road safety enhancements. These new projects and revenues were reflected in the 2012 Program Update.

The Sellwood Bridge Replacement revised cost estimate of \$268.8 million is reflected in the 2012 Update, along with current secured funding. Another change to the Willamette River Bridges program for fiscal years 2013-14 include the relocation of the west ramp of the Hawthorne Bridge.

The current CIP is based on the best available revenue and cost information and, by clear and objective means, establishes a strategy for addressing the highest priority transportation needs.

The total capital need identified in the Transportation Capital Improvement Plan for candidate projects totals more than an estimated \$1.8 billion.
