### Executive Summary

The Department of Community Justice (DCJ) East Campus houses several important supervision programs. DCJ adheres to evidence-based risk principles to determine supervision levels ensuring resources are targeted to the highest risk. Multnomah County receives a large number of high risk individuals and is still able to produce lower recidivism rates for these cases compared to the statewide average.

### Program Summary

High risk supervision uses evidence-based strategies to identify criminogenic risk factors to supervise high risk individuals on probation and parole. DCJ utilizes the Level of Service/Case Management Inventory (LS/CMI), the Women’s Risk Need Assessment (WRNA) and the Public Safety Checklist (PSC) assessment tools to measure the risks and needs of adults. The LS/CMI is also a fully functioning case management tool that provides a summary of the individual’s static and dynamic criminogenic risk and need factors, as well as special responsivity considerations to be deployed during supervision. The WRNA is a gender responsive risk assessment created with justice-involved women’s social and psychological needs in mind. The PSC provides a quick, objective, validated assessment of the probability an individual will be re-convicted of a felony or rearrested for a person or property offense based on specific characteristics.

DCJ continues to use Effective Practices in Community Supervision (EPICS), an evidence-based case management model. With EPICS, Parole-Probation Officers (PPO) follow a structured approach to their interactions with their clients, allowing PPOs to effectively target the criminogenic needs using cognitive behavioral interventions for high risk individuals. They also integrate trauma informed practices and brain science into their daily work. Supervision is conducted through: a) home and office visits; b) contacts with family; c) correspondence with community members and treatment providers; and d) collaboration with law enforcement agencies. The risk of these individuals committing new crimes is reduced when evidence-based supervision is in place and monitored. The Reduced Supervision model takes care not to bring justice-involved adults who are low risk deeper into the criminal justice system, provides minimal supervision and encourages increased self-sufficiency.

The COVID-19 pandemic impacted operations beginning in March 2020. PPOs had limited in-person visits to address immediate public safety concerns and address high risk behaviors. Field visits resumed in February 2021 and office visits resumed in October 2021, with staff taking the necessary safety precautions. PPOs are meeting clients face-to-face on a regular basis and have resumed all case management practices.
