AGENCY ENVIRONMENTAL REVIEW PROCESS

BETTER - SAFER - CONNECTED October 2019

Method Memos describe the data sources and analytical methods that will be used to describe the existing conditions and evaluate impacts of the alternatives.

Updated version of this will be in the Environmental Technical Reports.

Baseline Conditions Reports are the "existing conditions" sections of the Environmental Technical Reports. Updated version will be included in the Environmental Technical Reports. Design Technical Reports provide the design and design-related formation for each alternative that will be the basis for estimating environmental impacts in the Environmental Technical Reports. **Environmental Technical Report:** for each element of the environment that will be covered in the EIS, these reports document the relevant existing conditions, the impacts expected from each alternative (long-term, short-term and cumulative), potential mitigation, analytical methods used, and relevant agency and/or stakeholder coordination. Environmental information in the Draft EIS will be summarized from the information in these reports. These reports also provide much but not all of the information and findings that will be used to apply the preferred alternative evaluation criteria.

DRAFT Evaluation Criteria and Measures

Introduction

In June 2019, the Earthquake Ready Burnside Bridge (EQRB) Community Task Force (CTF) recommended draft evaluation criteria topics, based on information available at the time. Since then, at their July and August meetings, the CTF reviewed the draft criteria as well as draft measures for implementing them, and . The following reflects the draft criteria and measures tentatively approved by the CTF criteria and measures on 8/19/19.

The project team <u>will continue to has since gathered</u> input on <u>the CTF's draft</u> criteria and measures from other agency staff and stakeholders. <u>That input, forf the CTF's consideration, is reflected in the potential revisions (shown in track changes) in this document. <u>and bring that input to the CTF for consideration.</u> When finalized, the criteria will be used to help select a Preferred Alternative during the preparation of the Draft EIS.</u>

Notes on Measures and Scoring:

- Net Effect and Mitigation: Many criteria refer to "minimizing" impacts while others refer
 to "maximizing" benefits, whereas a few refer to "net benefits" (a combination of
 adverse and beneficial effects). For any criterion where the DEIS analysis reveals a
 meaningful "net effect" this can be included in the way that Measures are applied, even
 where "net effect" is not specifically mentioned in the criterion. When rating the
 alternatives, the scoring will consider the net effect, including the potential for,
 feasibility of, and level of commitment to mitigation that would avoid or reduce adverse
 impacts.
- Tradeoffs across Criteria: Minimizing adverse impacts to resources evaluated in one
 criterion could result in increasing adverse impacts to resources evaluated in another
 criterion. Each Measure for each criterion will be evaluated independently of the other
 criteria, so that where there are tradeoffs or conflicts, the combined effect across
 different criteria will be reflected in the total score for a given alternative.
- While some of the evaluation criteria are intended to measure the extent to which
 alternatives would implement certain regulatory objectives, the evaluation criteria are
 not intended to replace or supersede any relevant regulatory requirements. It's
 assumed that any selected alternative would need to comply with relevant regulatory
 requirements.

August 30October 11, 2019

Criteria Groups

1. Seismic Resiliency

- 1a.1 Maximize confidence in post-earthquake crossing operability and reparability.
 - Measure: Qualitative assessment for how much reliance on original components is needed for seismic resiliency.
 - Measure: Ability to implement reliable seismic performance mechanisms and devices.
- 1a.2 Maximize post-earthquake emergency vehicle access and minimize travel time.
 - Measure: Emergency vehicle travel time from X to Y. (model results if available and reliable; if not, then qualitative assessment).
- 1a.23 Maximize ability for all modes to use the crossing post-earthquake.
 - Measure: Ability to accommodate over-dimensional vehicles and loads.
 - Measure: Ability to simultaneously accommodate all travel modes.
- 1a.3 Minimize risk that adjacent buildings could damage or block the bridge after a major earthquake, and minimize risk that crossing construction could lessen the seismic resilience of adjacent buildings.
 - Measure: Quantify level of risk exposure from adjacent buildings, weighting those alternatives with more URM exposure createsat a higher risk than other building types.

During Const.

 N/Λ 1b.1 Minimize risk that adjacent buildings could damage or block the bridge after a major earthquake, and minimize risk that crossing construction could lessen the seismic resilience of adjacent buildings.

Measure: Quantify length of exposure to adjacent buildings, weighting those with more URM exposure at a higher risk than other building types.

1b.2 Minimize delay in achieving a seismically resilient crossing.

Measure: Estimated duration of construction

BETTER - SAFER - CONNECTED

August 30October 11, 2019

2. Community Quality of Life (includes Indirect Land Use Impacts and Community Resources)

- 2a.1 Minimize long-term noise and light/shadow impacts.
 - Measure: Qualitative assessment of light/shadow impacts due to changes in roadway alignments relative to land uses (e.g., will new alignment direct headlights at or away from residential uses; will it change sunlight/shadow on residential or community spaces?).
 - Measure: Assessment of noise impacts due to changes in roadway alignments relative to land uses.
- 2a.2 Minimize long-term impacts to community facilities and events under and near the bridge (e.g., Skatepark, Saturday Market, park festivals, parades, organized runs, etc.).
 - Measure: Number of community facilities impacted, as well as magnitude and character of those impacts (Note: metrics for these two measures may include duration of impact, distance to temporary relocation, number of people affected, or other metrics as appropriate to the facility, event, and impact).
 - Measure: Number of community events impacted, as well as magnitude and character of those impacts.- (see note for above Measure).

During Const

ong Term

- 2b.1 Minimize temporary impacts to community facilities and events under and near the bridge.
 - Measure: Number of community facilities impacted, as well as magnitude and duration of those impacts. (Note: metrics for these two measures may include duration of impact, distance to temporary relocation, number of people affected, or other metrics as appropriate to the facility, event, and impact).
 - Measure: Number of community events impacted, as well as magnitude and duration of those impacts. (see note for above Measure).

BETTER - SAFER - CONNECTED

August 30October 11, 2019

3. Equity and Environmental Justice (includes Social Services)

- 3a.1 Minimize displacements of emergency beds.
 - Measure: Shelter beds displaced.
- 3a.2 Maintain social service providers' long-term ability to provide current level of service and potential for expansion.
 - Measure: Social service provider functions (not including beds) displaced (measured in sf displaced).
 - Measure: Number of clients currently served annually by social service function that is lost/impacted.
 - Measure: Permanent access impacts (number and significance), and availability and quality of alternative access or alternative location for impacted services (walking distance/time to alternative locations; dependence of remaining services on being proximate to the services that would be displaced).
 - Measure: Impact on ability of existing services to expand, compared to No-build.
- 3a.3 Avoid disproportionate adverse impacts to vulnerable and Environmental Justice communities.
 - Measure: Based on qualitative analysis of impacts to low income and minority populations as measured in the analysis of compliance with the Exec Order on Environmental Justice.
 - Measure: Based on qualitative analysis of impacts to other vulnerable populations as identified during outreach conducted for the Diversity, Equity, and Inclusion program outreach.

BETTER - SAFER - CONNECTED

August 30October 11, 2019

- 3b.1 Minimize temporary impacts to social service providers.
 - Measure: Social service provider functions temporarily displaced (measured in square feetf displaced, number of clients served by displaced function) and availability and quality of temporary replacement functions, including walking distance/time and dependence of remaining services on being proximate to the services that would be temporarily displaced).
 - Measure: Number, significance and duration of temporary access impacts, and availability and quality of alternative access.
 - Measure: Number, significance and type of services being provided that would likely be relocated during construction and duration of this relocation. Measure: Temporary access impacts (number, duration, and significance), and availability and quality of alternative access (walking distance/time to alternative locations).
- 3b.2 Avoid temporary disproportionate adverse impacts to vulnerable and Environmental Justice communities.
 - Measure: Based on qualitative analysis of impacts to low income and minority populations as measured in the analysis of compliance with the Exec Order on Environmental Justice.
 - Measure: Based on qualitative analysis of impacts to other vulnerable populations as identified during outreach conducted for the Diversity, Equity, and Inclusion program outreach.
- <u>3b.3</u> Ensure that design and construction approach allow ample opportunities for DBE firms to be involved in the construction/contracting process.
 - Measure: Approximate percentage of the construction work that could potentially be done by DBE (small) firm, relative to DBE goals.

During Const.

BETTER - SAFER - CONNECTED

August 30October 11, 2019

4. Crime Reduction and Personal Safety

Long Term

- 4a.1 Maximize personal safety and crime reduction by following principles of Crime Prevention Through Environmental Design (CPTED).
 - Measure: Qualitative assessment of consistency with the CPTED principle of Natural Surveillance.
 - Measure: Ability of design to allow activated spaces and improved sightlines beneath the bridge.

During Const. N/A

BETTER - SAFER - CONNECTED

August 30October 11, 2019

5. Business and Economics

- 5a.1 Minimize business displacements and permanent access impacts.
 - Measure: Number of business displacements (measured in number of businesses, square feet,f or number# of employees).
 - Measure: Qualitative assessment of permanent access impacts that don't result in full displacement of business (includes number, duration and magnitude of access impacts, and availability and quality of alternative access).
- 5a.2 Support redevelopment potential consistent with local plans.
 - Measure: Qualitative assessment of the extent to which newly vacant land is able to support uses that are Area of land newly available for development / redevelopmentconsistent with local plans (vs creating landlocked parcels or supporting changes in use that aren't consistent with local plans).
- 5b.1 Minimize temporary access impacts to businesses.
 - Measure: Qualitative assessment of short-term access impacts (includes number, duration and magnitude of short-term access impact, and availability and quality of alternative access).
- 5b.2 Minimize temporary regional economic impacts.
 - Measure: Estimated impact of construction on regional economic indicators (e.g., jobs, income, cost of delay).
 - Measure: Estimated temporary direct and indirect impacts to navigation during construction.
- 5b.3 Minimize loss of economic benefits <u>(includes businesses and charities)</u> from temporary impacts to major community ——events-under and near the bridge.
 - Measure: Estimated loss of participation (# of people) in community events that
 would be impacted; (this would be a proxy for the potential magnitude of lost
 spending; if possible/reliable, estimate the financial impact such as total loss of
 spending/earnings, g, or provide qualitative assessment)-.

onst.

BETTER - SAFER - CONNECTED

August 30October 11, 2019

6. Parks and Recreation Resources

ong Term

- 6a.1 Minimize park displacements and adverse functionality impacts <u>__ and maximize park</u> functionality improvements (consider the net effect of impacts include impacts to river recreation).
 - Measure: Assessment of adverse impacts to parks and recreation (e.g., magnitude (square feetf) and qualitative assessment of impacts on functions, events, and access (for maintenance, events, etc.).
 - Measure: Qualitative assessment of beneficial impacts (e.g., access, functions, potential to increase Parks revenues, increase resiliency, etc.).

uring Const

- 6b.1 Minimize temporary impacts to parks.
 - Measure: Magnitude (square feet) of temporary parkland displacements.
 - Measure: Qualitative Aassessment of temporary impacts to parks (e.g., magnitude (square feetf) and qualitative assessment of impacts on functions, events, access (for maintenance, events, etc). access and functionality impacts.
 - Measure: Impact of displaced events on Parks revenue.

BETTER - SAFER - CONNECTED

August 30October 11, 2019

7. Historic Resources

ong Term

7a.1 Minimize historic resource impacts.

- Measure: Number of resources displaced or damaged (include National Register resources and local historic landmarks) and magnitude/character of impacts.
- Measure: Number of resources with access, and context, and indirect impacts, and magnitude/character of impacts.
- Measure: Character and magnitude of impacts to historic districts.

During Const.

7b.1 Minimize temporary impacts to historic resources.

Measure: Qualitative assessment of temporary construction-related (direct and indirect) impacts to historic resources.

BETTER - SAFER - CONNECTED

August 30October 11, 2019

8. Visual and Aesthetics

- 8a.1 Minimize adverse impacts on to existing views and view corridors and support the potential for new scenic views.
 - Measure: Qualitative assessment of potential new views.
 - Measure: Qualitative assessment of potential impacts on <u>existing views and</u> designated view corridors (consider historic districts' design criteria and Citydesignated view corridors).
 - <u>Measure: Qualitative assessment of potential compatibility/conflicts with existing urban design features.</u>
- 8a.2 Maximize pedestrian/bicycle-aesthetic experience for all users on and under the bridge.
 - Measure: Qualitative assessment of potential visual and aesthetic -opportunities
 (based on conceptual designs) -for users on and under the bridge during both
 daytime and nighttime hours. Consider opportunities related to scale, forms and
 materials, viewing, wayfinding, transitions to and from public spaces,
 lighting/shade/shadows, and activating areas for public use (consider Portland
 design guidelines).
- 8a.3 <u>Create opportunity for a crossing that provides an iconic/demonstrative visual experienceRespect compliment?</u> the visual context of the project area and integrate project with the urban fabric.
 - Measure: Qualitative assessment of potential to develop gateways, new views, processional experiences, and demonstrative and/or iconic visual experiences of and on the bridge.
 - Measure: Qualitative assessment of potential compatibility/conflicts with existing public, residential and retail spaces, or other urban design features.

During Const.

ong Term

N/A

BETTER - SAFER - CONNECTED

August 30 October 11, 2019

During Const

9a.1 Minimize impacts to water quality and flooding.

- Measure: Estimated changes in <u>treatment of</u> stormwater <u>discharge</u> <u>generated from</u> impervious surface compared to No-build.
 - Measure: Estimated long-term changes in flood levels.

Natural Resources, Climate Change and Sustainability

- Measure: Estimated area of disturbance of potentially contaminated river substrate.
- Minimize impacts to fish and wildlife. 9a.2
 - Measure: Estimated changes to aquatic habitat (due to change in pier area below OHW and above the critical scour depth - differentiate habitat quality: higher quality (<20' deep) and lower quality (>20' deep).
- Minimize temporary impacts to water quality and flooding. 9b.1
 - Measure: Estimated changes in untreated runoff during construction Estimated area of disturbance in proximity to the Willamette River.
 - Measure: Estimated temporary change in flood levels during construction (reasonable worst-case during construction).
- 9b.2 Minimize temporary impacts to air quality and green-house gas emissions.
 - Measure: Qualitative assessment of effects on emissions due to traffic diversions/detours.
- 9b.3 Minimize temporary impacts to fish and wildlife.
 - Measure: Extent of pile driving.
 - Measure: Size of cofferdams and extent of temporary fill in the river.
- 9b.4 Minimize resource consumption and waste production during construction.
 - Measure: (TBD, based on information provided by Greenroads analysis).

Pedestrians, Bicyclists and People with Disabilities (ADA – Americans with Disabilities Act)

Long Term

10a.1 Maximize City's Vision Zero principles for safety and comfort for bicyclists, pedestrians, and other low-impact vehicles (e.g., ——scooters, skateboards).

- Measure: Width of bike path and potential for future bicycle climbing lanes.
- Measure: Width and slope of pedestrian and ADA facilities on bridge.
- Measure: Quality of protection from motor vehicles.
- Measure: Consistency of bike facilities with relevant Vision Zero principles (or, Consistency with Portland Bike Plan Bikeway Facility Design Best Practices) (note: measure only principles not addressed in other measures, to avoid double counting).

BETTER - SAFER - CONNECTED

August 30October 11, 2019

- 10a.2 Maximize access/connectivity for bicyclists and other low-impact vehicles.
 - Measure: How well the bike facility on the bridge connects to existing and planned bike network
 - Me
 - Measure: Quality and quantity of accesses to transit stops and connections.
 Measure: Travel time for this mode from X to Y (quantitative if travel model provides reliable estimate; if not, then qualitative assessment)
 - 10a.3 Maximize safety and comfort for pedestrians and ADA.
 - Measure: Width and slope of pedestrian and ADA facilities on bridge.
 - Measure: Quality of protection from motor vehicles, bikes and other vehicles.
 - Measure: Consistency of pedestrian and ADA facilities with relevant Vision Zero principles (or other relevant standards including PedPDX Toolbox Strategies and Actions) (note: measure only principles not addressed in other measures).
- 10a.34 Maximize access/connectivity for pedestrians and ADA.
 - Measure: How well the pedestrian and ADA facilities on the bridge connect to existing and planned pedestrian and ADA network.
 - Measure: How well the pedestrian and ADA facilities on the bridge connects to social services and other frequent destinations for users.
 - •—-Measure: Quality and quantity of accesses to transit stops and connections.
 - Measure: Travel time for pedestrians and ADA from X to Y (quantitative if travel model provides reliable estimate; if not, then qualitative assessment)
- 10b.1 Minimize temporary travel time and access/connectivity impacts for bicyclists.
 - Measure: Extent of out-of-direction travel, or travel time change, for bicyclists during
 construction (reflect information, if available, on origins and destinations of trips
 using the Burnside Bridge; may require qualitative assessment and professional
 judgment; possibly consider the duration of temporary changes in
 access/connectivity).
- 10b.2 Minimize temporary travel time and access/connectivity impacts for pedestrians.

 Maximize potential to provide temporary ADA and pedestrian crossing facilities that are comfortable and safe and maximize efficient access and connectivity for users of the facilities.
 - Measure: Extent of out-of-direction travel, or travel time change, for ADA users and pedestrians during construction (reflect information, if available, on origins and destinations of trips using the Burnside Bridge; may require qualitative assessment and professional judgment; possibly consider the duration of temporary changes in access/connectivity).
 - Measure: Qualitative safety assessment of temporary ADA and pedestrian facilities.

During Const.

BETTER - SAFER - CONNECTED

August 30October 11, 2019

- 10b.3 Minimize Maximize City's Vision Zero principles for safety and comfort for bicyclists, pedestrians, and other low-impact vehicles (e.g., scooters, skateboards). temporary safety impacts for bicyclists.
 - Measure: Quality of protection of bicycle <u>and pedestrian</u> path<u>s</u> from other modes.
 - Measure: Width of temporary bicycle and pedestrian paths.
 - Measure: Qualitative safety assessment of temporary ADA and pedestrian facilities.
 - Measure: Quality and quantity of accesses to transit connections.
 - Measure: Consistency of temporary bicycle facilities with relevant Vision Zero principles (or other relevant principles/standards) not addressed in other measures.

BETTER - SAFER - CONNECTED

August 30October 11, 2019

11. Motor Vehicles, Freight and Emergency Vehicles

- 11a.1 Maximize safety for motor vehicles and freight by promoting a 25mph operating speed.
 - Measure: Qualitative assessment of impacts to motor vehicle safety (factors TBD: may include lane width and other cross section details, curve radii, potential conflict with other modes, sideswipes, property damage, and others)
 - 11a.2 Maximize capacity and travel time improvements for motor vehicles, freight and emergency vehicles.
 - Measure: Travel time for motor vehicles from point X to point Y (quantitative if travel model provides reliable estimate; if not, then qualitative assessment)
 - 11a.3 Maximize access/connectivity for motor vehicles, freight and emergency vehicles.
 - Measure: How well the travel lanes on the bridge connect to existing and planned street network.
- 11b.1 Minimize temporary access and travel time impacts for motor vehicles, freight and ———emergency vehicles.
 - Measure: Travel time for motor vehicles from point X to point Y (quantitative if-travel model provides reliable estimate; if not, then qualitative assessment).
 - Measure: Duration of temporary closure/capacity reduction.
 - Measure: Quantify number and duration of temporary road closures due to construction.
- 11b.2 Minimize temporary safety, on-street parking, and capacity impacts for motor ——vehicles, freight, and emergency vehicles.
 - Measure: Number of on street parking spaces temporarily lost during construction.
 - Measure: Qualitative assessment of the safety of construction phase detours and reroutes relative to existing conditions.
 - Measure: River crossing capacity during construction compared to No-build (include consideration of alternative crossing locations)
- 11b.3 Minimize temporary access and travel time impacts for motor vehicles.
 - Measure: Travel time for motor vehicles from point X to point Y (quantitative travel model provides reliable estimate).
 - Measure: Duration of temporary closure/capacity reduction.
 - Measure: Quantify number and duration of temporary road closures due to construction.

Long Term

BETTER - SAFER - CONNECTED

August 30October 11, 2019

12.	Transi	t
Long Term	12a.1 • 12a.2 • 12a.3	Maximize Setreetcar readiness. Measure: Qualitative assessment of impacts to future Setreetcar and bus operations (factors TBD: may include lane width and other cross section details, curve radii, potential conflict with other modes, and others—]. Maximize bus accessibility. Measure: Qualitative scale considering presence of dedicated bus pullouts, transit stops, transfer points to other modes (LRT). Minimize Transit Collision Vulnerability. Measure: Qualitative assessment for whether the bridge options create differing intersecting geometries and lane width variations, and how those may increase or decrease the likelihood of motor vehicle collisions with northbound and southbound Streetcars on MLK and Grand Avenues. (factors TBD: may include lane width, curve radii, intersection cross section, potential for conflicts between modes, anticipated weave motions, and likelihood of sideswipe collisions).
During Const.	12b.1 •	Minimize temporary impacts on transit access, safety, travel times, and ridership. Measure: Frequency and duration of LRT, Streetcar, and bus disruptions.

13.	Fiscal	Responsibility
Long Term	13a.1 • 13a.2	Minimize total project cost. Measure: Estimated total project cost (including design, right-of-way acquisition, construction, temporary bridge, mitigation, utility relocation, etc.). Minimize long-term maintenance effort/cost. Measure: Number and cost of major maintenance projects expected over life of the bridge, including the necessary repairs to the bridge following a major earthquake.
During Const.	N/A	

BETTER - SAFER - CONNECTED

August 30October 11, 2019

Topics for evaluation/decision-making in later project phases:

While developing the draft criteria groups, the CTF identified a number of topics that cannot be adequately or fully evaluated with the level of design and information that will be available during the DEIS phase. These are listed below with the recommendation that they be applied in later project phases such as during design or construction:

Seismic Resilience	Include equipment on bridge to create additional resilient functions after a major earthquake
Personal Safety	Maintain a safe construction site Implement design that minimizes risk of attempted suicide from the structure
Ped, ADA, Bicyclists	Maximize pedestrian/bicycle aesthetic experience on the bridge
Sustainability	Waste reduction and use of sustainable materials in design and construction. Energy sustainability in design
Navigation	Bridge lighting and signals do not adversely affect navigation safety
Aesthetics	Bridge lighting does not increase night sky impacts Provide a structure that instills a sense of community pride

Better. Safer. Connected.

Seismic Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Seismic Resiliency

Date: Wednesday, September 25, 2019

Attendees: Sam Hunaidi, ODOT Steve Drahota, HDR

Liantao Xu, ODOT Heather Catron, HDR
Karl Dinkelspiel, Prosper Portland Cassie Davis, HDR

Christina Tomaselli, HDR

Intro

• Steve Drahota provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

1a.1 Maximize confidence in post-earthquake crossing operability and reparability.

- Hunaidi asked if the measure for seismic resiliency should be the same for all alternatives.
 - Drahota noted that although the seismic design criteria is the same for all alternatives, this measure may result in different scores. This is because each alternative relies on a different structural system - some relying on 95+ year old members, some having more support members in the liquefaction-prone area, and some having more of an ability in the future to reduce the number of supports.
- Drahota asked the group if they thought the level of reliability was the same between retrofit and replacement alternatives.
 - Xu noted that Couch Connection alternative probably has a less reliable seismic response than the non-forked alternatives.

1a.2 Maximize post-earthquake emergency vehicle access and minimize travel time.

Xu noted that all three alternatives seem pretty close, and this measure has become
less meaningful since the Fixed Bridge alternative is being removed. This measure
should be eliminated. Hunaidi agreed.

1a.3 Maximize ability for all modes to use the crossing post-earthquake.

- Curb-to-curb width variation between retrofit and replacement alternatives is a meaningful factor.
- Hunaidi noted drivers may feel less safe if the lanes are too narrow.

1b.1 Minimize risk that adjacent buildings could damage or block the bridge after a major earthquake, and minimize risk that crossing construction could lessen the seismic resilience of adjacent buildings.

 Is the measure specific to unreinforced masonry (URM) or should it be broader for all buildings?

Better. Safer. Connected.

- Should proximity to URM be weighted more since some URMs are within 2 feet of the bridge?
- Drahota noted that, even if an assumption was made that existing buildings were designed for seismic demands, the criteria would likely be less than what EQRB is designing for (because EQRB is designing above standard code).
 - o Xu noted desire to adjust measure to include all buildings.
 - Drahota noted that retrofit and replace would be similar, Couch Connection would be different.
- Could a qualitative assessment be conducted on some of the adjacent new buildings?
- Hunaidi/Xu Current language is generally ok, with some small tweaks to include all buildings.

1b.2 Minimize delay in achieving a seismically resilient crossing.

- This measure is specific for the timeline to achieve seismic resiliency, to be rated based on the number of years of construction. Is this measure meaningful from a scoring perspective or should it be removed now that duration range is short between the alternatives and the measure depends on factors that are outside the control of the alternative itself (e.g., funding timelines)?
 - Xu Possibly, but only if the CTF understands there is only a range from 3.5 (Retrofit without bridge) to 6 years (Replacement with temporary bridge) between the alternatives.

General Comments/Questions

- Hunaidi asked why FHWA is above the Policy Group (PG) on the Committee Framework.
 - o FHWA have to concur on PG decisions during NEPA phase.
- Possible other criteria: how easy will it be to repair bridge/repair-ability? (Xu)
- Hunaidi suggested that for the replacement alternative, consider making eastbound direction wider for the Couch Connection "forked" alternative. If buildings are in path of Couch Connection alternative, more debris adjacent to bridge.
- Consider possible public criticism about why designing to only a CSZ Mag 9? Why not
 design to a higher EQ? What is the stopping point, and what is the level of investment
 needed to go beyond the code?
- Hunaidi asked how important redundancy is with this criteria?

Better. Safer. Connected.

Community Quality of Life Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Community Quality of Life

Date: Thursday, September 26, 2019

Attendees: Sam Hunaidi, ODOT John Wasiutynski, MultCo

Kelly Ball, ODOT

Scott Turnoy, ODOT

Max Bernstein, ODOT

Tate White, Parks

Jeff Heilman, Parametrix

Heather Catron, HDR

Cassie Davis, HDR

Lauren Wilbur, HDR

Intro

• We were able to skip the project briefing at this time – everyone had seen it!

Criteria and Measures Discussion

2a.1 - Long Term - Minimize long-term noise and light/shadow/impacts

- John thinks this ties back to how much traffic will be allowed on the bridge after retrofit/replacement. Light glare directly relates to how many lanes of traffic. Thinks there is a need to take a half step back and ask what we need day-to-day for normal operations. Also relates to noise – engine noise and whooshing sound from tires.
 Permeable friction course for pavement treatments? Human scale lighting vs car scale lighting?
 - Jeff noted that some of these suggestions (lighting, pavement treatment) will be decided during design phase and so wouldn't be part of the preferred alternative decision.
- Sam mentioned design speed could affect noise as well.

2a.2 – Long Term – Minimize long-term impacts to community facilities and events under and near the bridge

--and--

2b1 – During Construction – Minimize temporary impacts to community facilities and events under and near the bridge.

- How are we measuring the magnitude of impacts to these events? Distance of displacement? Number of events displaced? Length of time displaced? Number of people who can't attend now?
 - All of the above! Still working on this.
 - Kelly suggests looking at events and at the number of people who are drawn to the area/use the area and if they are still able to continue this in combo with CPTED. One large event vs multiple small events – unsure what is better.
 Broaden outreach to other businesses in the general area.
 - John suggests looking at today's use as a baseline

Better. Safer. Connected.

General Comments/Questions

- Skate Park Impacts
 - o Will be having conversations re: mitigation of short term and long term impacts
- Saturday Market Impacts
 - If we move Saturday Market, do we displace another event in the area we move to?
 - Does the temporary bridge impact the Saturday Market area more than no temporary bridge?
 - Should we further emphasize the impacts to the Saturday Market?
 - Note that a lot of improvements were made by Parks to the space under the bridge for vendors, etc.
- Temporary bridge vs no temporary bridge and the construction footprint does this change?

Better. Safer. Connected.

Equity Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Equity

Date: Thursday, September 26, 2019

Attendees: Sam Hunaidi, ODOT

Kelly Ball, ODOT Scott Turnoy, ODOT MaryJo Andersen, Multco Carolyn Lee, Parks Max Bernstein, ODOT Tate White, Parks John Wasiutynski, MultCo Jeff Heilman, Parametrix Heather Catron, HDR Cassie Davis, HDR Lauren Wilbur, HDR Andre Baugh, Group AGB

Intro

• Jeff Heilman provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

3a.1 - Long Term - Minimize displacements of emergency beds

 Andre asked if we are looking at the differential between summer and winter – cooling centers in the summer and shelter in the winter. Beds may not capture everything.
 Consider including warming and cooling centers in number of bed and amenity displacements.

3a.2 – Long Term – Maintain social service provider functions displaced (not including beds)

- Consider walking distance to displaced/alternate services. Feasibility/quality of mitigation.
- Question of proximity. If you move one service, do you need to move all so that they're
 in a similar place? Chain reaction of moving one facility or function that depends on
 proximity to others.
- Note that with other projects going on (i.e. Rose Quarter), these populations may be affected in other locations and displaced/go to project area. Current numbers may not be accurate for project area.
 - o Are we doing anything to prohibit social services ability to expand to flex to this?
 - Noted that populations/services are moving further east

3a.3 – Long Term – Avoid disproportionate adverse impacts to vulnerable and Environmental Justice Communities

- Light/noise/dust affect these populations (homeless) ties back to quality of life criteria
- People in mobility devices
- Transit time impacts
- Does this include Night Strike's ability to provide meals and services?

Better. Safer. Connected.

- Generational equity long term effect of carbon emissions/climate change
 - o Measurable: alternatives that prioritize or support transit better
- In disasters those who have the least, suffer the most.

3b.1 – During Construction – Minimize temporary impacts to social service providers

• See long term notes – some apply here as well.

3b.2 – During Construction – Avoid temporary disproportionate adverse impacts to vulnerable and Environmental Justice Communities

- Light/noise/dust affect these populations (homeless) ties back to quality of life criteria
- People in mobility devices
- Transit time impacts
- Andre noted that the design of bridge could impact contracting opportunities for disadvantaged businesses – i.e., 4ft diameter piles vs 12ft diameter piles. DBEs could participate more with smaller piles and design features that can be done by smaller firms. Think about DBE contracting goal early on.
 - Summary: Does the design or construction method limit the opportunities for a DBE to be involved in the construction/contracting process?

General Comments/Questions

- Max asked if we are using any tools like EJ Screen?
 - o No modeling software at this time, but multiple data sources

Better. Safer. Connected.

Crime Reduction & Personal Safety Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Crime Reduction & Personal

Safety

Date: Thursday, September 26, 2019

Attendees: Kelly Ball, ODOT Jeff Heilman, Parametrix

Max Bernstein, ODOTHeather Catron, HDRTate White, ParksCassie Davis, HDRVicente Harrison, ParksLauren Wilbur, HDR

Sam Hunaidi, ODOT

Intro

• Jeff Heilman provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

4a.1 – Long Term – Maximize personal safety and crime reduction by following the principles of CPTED

- Vicente noted that the Couch connection could increase homeless camps, but also improve sightlines in the area. Noted lighting in general is poor currently.
- Tate thinks making sure that the construction areas are secured should be added, but is unsure that that would differentiate alternatives.
- Kelly noted that alternatives that bring more people to the area could be a criteria. How are we activating the area under/over/around it – especially for community spaces?
 Elevators/access?
 - Tate shared that the Saturday Market was moved to its current location in order to activate a space that was dangerous/undesirable before. Could that type of activation be added here somewhere, and not just in parks?
- Summary: promoting sightlines and activating spaces are suggested adds.

General Comments/Questions

- Vicente asked where the construction site is going to be. Jeff showed him where the estimated construction zone is.
- Vicente asked about impacts to Waterfront Parks and festivals. Jeff said that they think that a lot of events can still happen, but that some areas will be consumed by construction.
- Group understood that a lot of these safety concerns will be more present during design/construction – too much unknown right now.
- Concern re: social services and safety involved there, but still too many unknowns.
- Jeff asked if the group feels there is a meaningful difference between the retrofit and replacement spaces under the bridge most said yes.

Better. Safer. Connected.

- Kelly noted that when the cherry blossoms bloom, people gather more in that general area. Draws people in.
- Vicente noted that he prefers a replacement alternative as that connects community spaces better and will be more seismically resilient.
- Max asked what the top concerns are for the EIS. Jeff responded that there are a
 number of things with big impacts that have proven mitigation we can rely on for
 mitigation, but the potential social services impacts are a big concern that could require
 a new way of looking at mitigation. One of the bigger choices coming up is temp vs no
 temp bridge.
- Note that boats randomly tied up and left has been a problem in the past. Multnomah River Patrol should be engaged. Could hinder construction.
- Vicente noted that the two lanes split in the Couch Connection may be better from an emergency evacuation perspective.
 - Sam noted the building in the middle, which is a major obstacle
- Vicente noted that revisiting this topic is crucial at design/construction there will be more input at this time.

Better. Safer. Connected.

Business, Economy, & River Navigation Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Business, Economy, & River

Navigation

Date: Wednesday, September 25, 2019

Attendees: Justin Douglas, Prosper Portland

Sam Hunaidi, ODOT Robert DeVassie, ODOT Joe Severson, OSMB Anthony Barber, US EPA Brenda Martin, Trimet Scott Turnoy, ODOT

Marci Johnson (phone), USACE

Peter Finley-Fry, CTF/CEIC

Tate White, Parks
Cassie Davis, HDR
Heather Catron, HDR
Jeff Heilman, Parametrix
Steve Drahota, HDR
Lauren Wilbur, HDR

Intro

• Jeff Heilman provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

5a.1 Long Term - minimize business displacements and permanent access impacts

• Justin thinks this measure may be in conflict with 5a.2.

5a.2 Long Term - support redevelopment potential consistent with local plans

- Justin thinks this measure may be in conflict with 5a.1. Would like to think more about this one in particular.
 - Cassie: would adding that these are specifically new areas instead of areas opened as a result of displacements help?
- Peter thinks this measure should be removed completely, as the eastside is already developed

5b.1 During Construction - Minimize temporary access impacts to businesses

 Robert asked if we are also valuing time – i.e. how long it takes to get to work with traffic impacts

5b.2 During Construction - Minimize temporary regional economic impacts

Joe: How might hydrology impact navigation?

5b.3 During Construction – Minimize loss of economic benefits from temporary impacts to major community events under and near the bridge

 Tate asked if the impacts of lost revenue to Parks is fully captured. They had to do layoffs this year because of lost revenue. Want to make sure this is considered, as some

Better. Safer. Connected.

of this revenue (primarily through permit fees) is used for operating costs. Would like to think about this more. May need to be reworded, and may belong in Parks.

- Justin asked about loss of space for Saturday Market stalls, and if that is considered as well.
 - Expecting to relocate the market temporarily. Loss of revenue for vendors as well.
 - Sam wants to capture that a lot of investment has been made in the area under the bridge.
 - Vendors should be captured here, but Parks Bureau itself should be captured in Parks.

General Comments/Questions

- Vertical clearance of temporary bridge when closed?
 - o About the same as the existing bridge when closed.
- Are we planning on entering into any cooperating agreement status with federal agencies for the EIS?
 - Yes we already have.
- Marci wants to make sure that we continue to partner with the Corps, especially during construction. They have missions that they need to complete.
 - o Natalie Edwards will be joining Natural Resources criteria discussion tomorrow.
 - o Also be sure you get a letter of concurrence from Port of Portland.
 - Project team recently submitted Navigation Study for review. All alternatives can meet the existing clearance conditions of the bridge today.
- Joe asked if we will also be looking at river resource impacts.
 - Will be covered within Natural Resources. Potential linkage to 5b.2 within this discussion though.
- Tony mentioned that a non-profit group wants to bring the Kitty Hawk (decommissioned aircraft carrier) to somewhere in the Willamette River. The main intent might be a museum but the group has also noted that it could be used for post-disaster staging and emergency shelter.
- Justin did the CTF want to layer in any environmental justice concerns? I.e. vendors at Saturday Market and people of color.
 - o This would primarily play out in the Equity criteria

Better. Safer. Connected.

Parks Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Parks

Date: Thursday, September 26, 2019

Attendees: Robert Hadlow, ODOT

Zalane Nunn, Parks Sandra Burtzos, Parks Art Graves, BDS Joe Severson, OSMB Cary Coker, Parks Mike Carr, Parks Tate White, Parks Tom McConnell, ODOT Tonya Booker, Parks
Jennifer Trimm, Parks
Patrick Sweeney, PBOT
Heather McKillip, Parks
Jeff Heilman, Parametrix
Heather Catron, HDR
Cassie Davis, HDR
Lauren Wilbur, HDR

Intro

• Jeff Heilman provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

6a.1 – Long Term – Minimize park displacements and adverse functionality impacts, and maximize park functionality improvements

- Joe asked about impacts to in-water recreation in the area, not just on-land parks.
 Modify language to include this?
- Patrick suggested adding ability of new bridge to attract lost/displaced revenue sources. How do we make it even better than now?
 - Heather noted this could also belong in visual/urban aesthetics as well
 - This would be more about performance of the space
- Tate suggested a measure re: maximizing the resiliency and functionality of parks and rec uses in the study area
- Maintenance access maintain key access points

6b.1 - During Construction - Minimize temporary impacts to parks

- Maintenance access maintain key access points
- Break down access into multiple things events, maintenance etc.
- Tate referenced criteria group 5 Business, and impacts to Park economics. May need an
 additional measure to account for lost revenue or event impacts. Vendors are covered
 under biz criteria, but Park Bureau themselves may need to be covered here. They
 depend on fees etc. for operation costs.
 - Primarily construction impacts, but also looking at events/vendors leaving for 5
 years and making it a permanent move. That could be more of a long term
 impact.

Better. Safer. Connected.

- Summary: Ability of bridge improvements to help Parks recapture lost revenue from vendor and event displacement.
- Loss of revenue to charities that raise funds with events in the parks should this be included in business criteria?

General Comments/Questions

- Bigger piers could displace some Saturday Market booths, correct?
 - o Potentially
- Noted that the stairs they improved by the Max station are a safety and maintenance issue. Parks would prefer not to have stairs in general. There are a lot of complications.
 Parks does want to continue to be involved in access conversations.
- Elevators/ramps/access etc. is a continued conversation. Would like official statement from Parks regarding whether or not they want the project to include option of direct ped and bike access from bridge into Waterfront Park.
- Closure of Eastbank Esplanade will it differentiate between alternatives?
- City/County/Trimet should sit down to talk about temporary displacement mitigation
- Bob emphasized that mitigation needs to gel among multiple things i.e. parks, historic resources, etc.
- Under canopy structure there are some fountain nozzles that exist could we build on this and make it a more active space? Lot of homeless people sleeping in that area now.
- Note that parks has storage that may need to be moved.
- Temporary bridge would potentially impact the existing pavilion still unsure at this point
- Art asked if we are looking at all parks Parks owned by Bureau but also skate park,
 Couch Couplet park area, etc.
 - Jeff said yes. Public parks and recreation areas are included. Skate park isn't a park but is used for recreation.
- Re: Eastbank Esplanade where do the people who exercise/bike/etc. go? Where are they displaced?
- ACTION: project team to look at previous detour routes that Park used

Better. Safer. Connected.

Historic Resources Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Historic Resources

Date: Thursday, September 26, 2019

Attendees: Robert Hadlow, ODOT

Winston Zack, ACOE/Corps

Tate White, Parks Art Graves, BDS

Brandon Spencer-Hartle, BPS

Rachel Hoy, BPS Jeff Buckland, ODOT Tom McConnell, ODOT David Ellis, Willamette CRA Tibby O'Briend, Willamette CRA Sarah Jalving, ODOT/SHPO Patrick Sweeney, PBOT Heather Catron, HDR Cassie Davis, HDR Jeff Heilman, Parametrix Lauren Wilbur, HDR

Intro

Jeff Heilman provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

7a.1 - Long Term - Minimize historic resource impacts

- How do you determine damage to a resource? Need to be able to rank this in some way. Some impacts are more important/substantial than others.
- Visual impact
- Discouraged use of area short term turning into long term
- We expect that the criteria evaluation will draw primarily from the analysis of effects conducted as part of Section 106.

7b.1 – During Construction – Minimize temporary impacts to historic resources

- Temporary visual impact
- Access impact
- Dust and other construction related impacts pushing people away from district in general
- Light/shadow impact potentially, but less so

General Comments/Questions

- Cassie asked if we can say that the Skate Park is potentially considered eligible for the National Register?
 - Sarah says this is likely going to be eligible, just waiting on final documentation from ODOT prior to SHPO determination
 - Approved that it is okay to say 'likely eligible' ACTION Cassie to send draft FAQs to Bob for review.
- Jeff Buckland asked if we are looking at direct and indirect impacts. Jeff responded yes.
- Do we know if adjacent buildings next to the bridge will need seismic upgrades?

Better. Safer. Connected.

- Noted that we may not know full impacts to adjacent building until construction actually starts
- The best we can do now is if/then statements
- How do we rank which landmarks are more important?
- Local landmark designation not a part of 106 how do we address them?
 - Being on a list doesn't mean it is of interest necessary more important if it is NR eligible. Something that makes sense to discuss on case by case basis. i.e.
 White Stag building sign.
 - Sarah thinks it's a good idea to address these in some way
- Note that temporary impacts could become permanent impacts i.e. vibration from construction may stop when the construction is done, but may also impact the resource in the long term
- Staging areas think through how these affect resources
- What happens to space where buildings are removed for this project?

Better. Safer. Connected.

Visual and Aesthetics Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Visual and Aesthetics

Date: Thursday, September 26, 2019

Attendees: Jeramie Shane, Mayer Reed Patrick Sweeney, PBOT

Sandra Burtzos, Parks Randy Gragg, Portland Parks Foundation

Art Graves, BDS Cassie Davis, HDR
Rachel Hoy (for Mindy Brooks), BPS Jeff Heilman, Parametrix
Liantao Xu, ODOT Lauren Wilbur, HDR

Intro

We were able to skip the project briefing at this time – everyone had seen it!

Criteria and Measures Discussion

8a.1 – Long Term – Minimize adverse impacts on existing views and view corridors and support the potential for new scenic views

N/A

8a.2 - Long Term - Maximize pedestrian/bicycle aesthetic experience on the bridge

- Should this be in pedestrian/bike section? Or need to expand to include experience on the bridge for all users, and under the bridge.
 - o Opportunities to stop and view, etc.
 - Keep in mind MIO sign is a protected view.

8a.3 – Long Term – Respect the visual context of the project area and integrate project with the urban fabric.

- Does not mean match it, but maybe be conscious of it.
- Would consider be a better term than "respect"? Could use the word 'contribute' to reframe more positively, but can be an issue re: not being able to measure it
- Criteria apply to retrofit and replacement bridges, but Randy states that this feels a little contradictory for this subject
- Randy asked: Can we reframe a criteria to show that the bridge is demonstrative/iconic?
 Including designed for the idea that every time it opens is an event. Make it feel more like a positive addition to the city, vs making it blend in/avoiding things.
 - Jeff stated that there hasn't been a decision regarding whether a new bridge should be iconic or not; that's to be part of the upcoming analysis and outreach. How can we reword the criteria to reward the opportunity for iconic without unfairly biasing a decision?
 - Patrick agreed that the performance of the bridge when moving should be as aesthetically pleasing as the bridge is when it isn't moving

Better. Safer. Connected.

- How can we measure the notion of potential opportunity?
- Consider adding a criteria along the lines of "opportunity to create a processional experience / improved user experience"

General Comments/Questions

- Patrick mentioned that, if a new bridge, could include a lower deck. That would be a whole new user experience under the bridge. Like Steel Bridge.
- How do we set a visual bar, per say?
- Art says to stay away from using the term landscape unit (tech report reference).
- Being on the bridge experience vs view of bridge from afar what is a priority?
- How do we make sure we aren't pushed towards same old same old, but also include the opportunity to make something brand new and exciting? Does current language support that?
- When do we look at existing design guidelines? –Art/Rachel
 - Art said number 3 starts to sound like Central City guidelines
- Steve asked what if there was no visuals and aesthetics criteria? What would be lost?
 - Assessment relative to existing guidelines
 - Patrick maybe more threat of what you won't get.. we want to raise the bar and have something that contributes to overall beauty of the city.
 - Lose the ability to provide opportunity/potential
- Randy asked if he could testify at a CTF
- Randy thinks the bridge should contribute to Parks experience.

Meeting Follow-Up

- Patrick's notes/follow up:
 - Consider all users aesthetic experience under the bridge
 - Consider all users aesthetic experience on the bridge
 - Optimize the aesthetics of the structural and operational functions of the bridge
 - The design of the bridge should contribute to the user experience at either end of the bridge as much as in the middle of the bridge
 - Respect augment supplement
 - Contributes to the City's identity as Bridgetown

Better. Safer. Connected.

Natural Resources Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Natural Resources

Date: Thursday, September 26, 2019

Attendees: Sam Hunaidi, ODOT Tom Murtaugh, ODFW

Tate White, Parks
Tom Loynes, ODOT
MaryJo Anderson, MultCo
Devin Simmons, ODOT
Bob Hadlow, ODOT
Joe Severson, OSMB
Heather Catron, HDR
Monica Blanchard, ODFW
Natalie Edwards, USACE
Tom McConnell, ODOT
John Wasiutynski, MultCo
Bob Hadlow, ODOT
Bob Hadlow, ODOT
Heather Catron, HDR
Brian Bauman, HDR
Jeff Heilman, Parametrix
Lauren Wilbur, HDR

Intro

• Jeff Heilman provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

9a.1 - Long Term - Minimize impacts to water quality and flooding.

- Joe asked if we could add a measure re: change in hydraulic flow downstream that may impact downstream facilities
 - Note, will need to talk to H&H department (Natalie)
- Disturbance of sediments may be a measure, especially if the sediment is hazardous or does not meet the clean fill criteria
 - Project could evaluate how to use the excavated sediment as potential restoration effort – may be more construction related
- Tom Loynes asked about how the stormwater discharge changed between alternatives.
 Jeff said that was more of a factor when other alternatives were still in the mix. May need to rethink wording/language.
 - NMFS would view treatment of currently untreated area as a benefit. Should clarify language so evaluators do not believe additional CIA equates to a negative.
- Criteria/measure around erosion control?

9a.2 - Long Term - Minimize impacts to fish and wildlife.

- Tom Loynes thinks pier volume in the channel is important, but unsure if it will change between the alternatives
- Net fill in functional floodplain may be a better measurement
- Shallow water habitat is important for salmon, but deep water habitat should not be discounted as there are other species that rely on deep water habitat.
 - Less in the channels = better

Better. Safer. Connected.

9b.1 – During Construction – Minimize temporary impacts to water quality and flooding.

- Disturbance of sediments (and what we do with them)
- Difficult to measure estimated changed in untreated runoff during construction. May need to change wording here too.
- Potentially look at larger project/construction/staging areas vs smaller areas. Or staging areas further away from the water. A simpler construction would require simpler erosion/pollution control and result in reduced risk of impact.
- Criteria/measure around erosion control?

9b.2 – During Construction – Minimize temporary impacts to air quality and greenhouse gas emissions.

- Note we do not have this for long term because there is likely no meaningful difference between the design alternatives
 - John questions this assumption, but Jeff doesn't think the model will show a difference

9b.3 - During Construction - Minimize temporary impacts to fish and wildlife

• The lower amount of water that is sonified by pile driving the better – area and duration

9b.4 – During Construction – Minimize resource consumption and waste production during construction.

N/A

General Comments/Questions

- John asked about using fill for other projects.
- Tom Murtagh asked about what we do with sediments we disturb
- Asked if there was a difference between the alternatives re: staging areas/need for access? Jeff responded that he is unsure at this time.
 - That would help shape measures
- Elevation/size/amount of coffer dams is important– if that differs between alternatives
- John asked if there is an opportunity to enhance the habitats.
- Lights in the city and birds talk to Audubon?

Better. Safer. Connected.

Pedestrians, Bicyclists & ADA Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Pedestrians, Bicyclists, and

People with Disabilities (ADA)

Date: Wednesday, September 25, 2019

Attendees: Matt Kelly, PBOT

Sam Hunaidi, ODOT Denver Igarta, PBOT Gena Gastaldi, PBOT Tate White, Parks Scott Turnoy, ODOT Wendy Cawley, PBOT Art Graves, BPDS Brenda Martin, Trimet
Alex Oreschak, Metro
Patrick Sweeney, PBOT
Zachary Horowitz, ODOT
MaryJo Anderson, MultCo
Heather Catron, HDR
Steve Drahota, HDR
Cassie Davis, HDR
Lauren Wilbur, HDR

Intro

Steve Drahota provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

10a.1 – Long Term – Maximize safety and comfort for bicyclists and other low-impact vehicles (e.g., scooters, skateboards)

- Slide 33 shows the assumed cross-sections per alternative.
- How much space each alternative has and its alignment will inform the ratings.
 - Note that having a barrier between bike/ped added to the existing bridge, and therefore the retrofit alternative, is being discussed outside of the Project team.
 Constructing it will have an impact to usable widths, however, because of the need for shy distances from a barrier.
- Zack suggested a criteria to consider the possibility of adding a climbing lane (or bike passing lane)
- Sam asked if there has been an agreement re: size of sidewalk for City and/or County
 - Steve reiterated that the lane assignments (i.e., number and type of lanes) and widths are working assumptions at this point. The assignments were supported unanimously at the Multimodal Working Group.
- MaryJo also noted that there is a raised curb between bike/ped in the retrofit option, which may provide extra safety/comfort.
 - Steve noted that although the bike/ped pathway is raised, the Multimodal Working Group recommended to keep the sidewalk and bike lanes level because it provides a safer and more usable space.
- Wendy/Matt said that 10a.2 and 10a.3 could be combined and still support Vision Zero
 - Vision Zero could also be added into actual criteria heading, instead of being buried in measures.
- Denver recommended that the number of conflict points could be added as a measure.

Better. Safer. Connected.

10a.2 – Long Term – Maximize access/connectivity for bicyclists and other low-impact vehicles

Brenda wants to know the difference in how many people generally bike / walk / transit
across the bridge between the alternatives. Is there really even a difference between
alternatives now that the Fixed Bridge alternative was removed? It doesn't see like it
anymore.

10a.3 - Long Term - Maximize safety and comfort for pedestrians and ADA

- Quality of protection measure Patrick noted that speed differential has become an issue. Could the measure language articulate that more, which would then factor in the influence of e-bikes and scooters and the climbing lane potential?
 - There was consensus around adjusting the language to make speed the differential measure.
- Denver asked why width/slope are combined
 - Steve stated that this was primarily a differentiator for the fixed bridge less of an issue now. At least regarding slope.
 - Steve asked about the intensity re: 400ft stretch at 5% stretch. Denver thinks this
 is absolutely worth assessing.

10a.4 - Long Term - Maximize access/connectivity for pedestrians and ADA

- Brenda wants to know the difference in how many people generally bike / walk / transit
 across the bridge between the alternatives. Is there really even a difference between
 alternatives now that the Fixed Bridge alternative was removed? It doesn't see like it
 anymore.
- Potential measure access to transit stops and connections

10b.1 – During Construction - Minimize temporary travel time and access/connectivity impacts for bicyclists

All accepted this as an important measure.

10b.2 – During Construction – Maximize potential to provide temporary ADA and pedestrian crossing facilities that are comfortable and safe and maximize efficient access and connectivity for users of the facilities

- All accepted this as an important measure.
- Potential measure access to transit stops and connections

10b.3- During Construction - Minimize temporary safety impacts for bicyclists

• There could be temporary impacts for users of other bridges since a detour would increase those volumes. Can this measure be added?

Better. Safer. Connected.

General Comments/Questions

- Zack asked if we are looking into mitigating connecting existing bike/ped routes i.e. Sullivan's Crossing. Could this become a measure?
 - Make these connections permanent? Ways to connect to other projects?
 ACTION: project team to consider this.
- Gina: Some of the measurement language seems rather qualitative, not quantitative, and may be difficult to measure. "How well" is subjective vs number of XX. Consider using Level of traffic stress or Level of bike service?

Better. Safer. Connected.

Motor Vehicles Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Motor Vehicles

Date: Wednesday, September 25, 2019

Attendees: Matt Kelly, PBOT Eliseo Lemus (phone), ODOT

Rich Grant, PBOT
Don Russ, PF&R
Sam Hunaidi, ODOT
Scott Turnoy, ODOT
Wendy Cawley, PBOT
Anthony Buczek, Metro
Brenda Martin, Trimet

Zachary Horowitz, ODOT Heather Catron, HDR Steve Drahota, HDR Cassie Davis, HDR Lauren Wilbur, HDR

Patrick Sweeney, PBOT

Intro

• Steve Drahota provided an overview on the project and evaluation criteria/measures.

Criteria and Measures Discussion

11a.1 - Long Term - Maximize safety for motor vehicles and freight

- Matt wanted to ensure that safety means more than just crashes sideswipes and property damage should also be included.
- Anthony asked if we know that a hard barrier between vehicles and bike/ped is off the table for the retrofit option.
 - Ongoing conversation taking place. Working with assumptions shown.
- Essentially, want to look at what it takes to maintain a 25mph speed when designing speed/median/design features/etc. Project team to think through wording for this objective.
 - Safety within lane widths should be considered between the alternatives
 - Alex asked if we can we include the potential for an increased median width as a measure.
 - Don suggested looking at Ross Island Bridge as an example of an less safe condition versus a bridge with a wider painted median
 - Expected speed vs design speed?
 - Expected is 25mph (posted)
 - Zack should the ability to design for speed be the essence of the criteria?
 - Sam agrees with this more discussion needed
 - Heather asked for clarification how would this differentiate alternatives?
 Isn't this more of a design criteria?
 - Zack believe it could differentiate the alternatives, subject to the details of alignment curvature, lane widths, sight distance, and number of lanes.

Better. Safer. Connected.

11a.2 – Long Term – Maximize capacity and travel time improvements for motor vehicles, freight, and emergency vehicles

- Brenda wonders where the desire to improve travel times for motor vehicles is. Is that really a Project objective?
- Steve noted he is unsure that this will differentiate between alternatives once the fixed bridge alternative is removed from consideration.
 - o Don nothing has really changed on our end between the alternatives.
 - Consensus seems to agree that there is no meaningful difference between the alternatives and the measure can be removed.
- Does it depend on a certain time of day and does it matter? Does this account for larger vehicles using this alternative more frequently if the s-curve has been smoothed out?
 - Steve The traffic models could identify a very small difference because of the slowing of the Couch St "S curve", but not meaningful within a NEPA analysis level.

11a.3 – Long Term – Maximize access/connectivity for motor vehicles, freight and emergency vehicles

- Steve noted he is unsure that this will differentiate between alternatives once the fixed bridge alternative drops off.
 - o Consensus seems to agree that there is no meaningful difference.

11b.1 – During Construction – Minimize temporary access and travel times impacts for motor vehicles, freight, and emergency vehicles

- Anthony noted that he thinks the measure regarding duration of temporary closure and capacity reduction should be broken apart.
- Note that this primarily looks at Burnside Bridge project area only.
- Patrick asked if there is there a difference between our priorities for motor vehicles vs freight and emergency vehicles. Can this be separated into different measures?
 - Matt agrees thinks it is inconsistent with City goals to group them together.
 - Patrick recommended that we extract motor vehicles into 11b.3 for how we want to deal with motor vehicles. There was group consensus on this.

11b.2 – During Construction – Minimize temporary safety, on-street parking, and capacity impacts for motor vehicles, freight, and emergency vehicles

- Note that on-street parking has a larger study area outside of Burnside Bridge project area, and there may not be any meaningful difference within the project area. Wendy noted that in general they would like to stay away from on-street parking. Loading capabilities may matter more within the Study Area.
- Matt thinks capacity impacts could also be removed here, as we already talk about this
 in 11b.1.

Better. Safer. Connected.

General Comments/Questions

- Matt: These criteria do not seem to inform how the cross section is assigned for the various modes.
 - Steve: That is correct. The team is using the assumed cross sections for the NEPA analysis. It is intended that the final design will resolve the actual widths per mode. This includes tabling the precise lane width decision (i.e., 10ft vs 11ft) to a later date.
- Don noted that there has been a lot of feedback re: Sellwood Bridge and potentially underutilized bike/ped space
- Zach asked if we can we look at data that breaks down arterial vs highway system.
- There were also inquiries about temporary impacts due to I5RQ traffic.

Better. Safer. Connected.

Transit Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Transit

Date: Wednesday, September 25, 2019

Attendees: Matt Kelly, PBOT Patrick Sweeney, PBOT

Dan Marchand, Trimet

Scott Turnoy, ODOT

Wendy Cawley, PBOT

April Bertelsen, PBOT

Brenda Martin, Trimet

Zachary Horowitz, ODOT

Heather Catron, HDR

Steve Drahota, HDR

Cassie Davis, HDR

Christina Tomaselli, HDR

Alex Oreschak, Metro

Intro

• Steve Drahota provided an overview on the project and evaluation criteria/measures.

Evaluation Criteria and Measures Overview

12a.1 Maximize streetcar readiness.

Some vehicles could travel in one of two lanes if streetcar operated on the bridge.
 S-curve is tight but workable for the In-Kind Replacement and would require some space adjacent to the Couch St s-curve.

12a.2 Maximize bus accessibility.

- Turnoy noted a conflict for bus stop protected bike/ped facility.
- Martin would like to see travel time analysis using Metro model. Quantify safety for buses (is a 12 lane safer than an 11 foot lane). Could safety for buses at the s-curve be quantified? During construction, is it possible to have temporary bus priority on local streets as well as on the bridge?
- Marchand noted passenger delays as a meaningful metric for consideration.
- Davis mentioned a previous comment for a different rating (slow speed for s-curve is better for safety, less so for speed factor).
- Buszek noted the number of people crossing the river; how do we get people across in the study area (are the other bridges adequately accommodating those people with each alternative?).
- Horowitz asked if buses are rerouted and the number of lifts is known is it possible to upgrade bus stop facilities?

12b.1 – During Construction – Minimize temporary impacts on transit access, safety, travel times, and ridership.

 Buszek mentioned the alternatives seem clear. How to handle buses with or without a temporary bridge need to be considered. Is bus access on temporary bridge a mitigation or design option for future phase? (Mitigation measures to keep people moving).

Better. Safer. Connected.

- Drahota noted that further assessment would be needed if bus routes extend outside the existing API.
- Buszek noted mitigation considerations are a struggle even for a temporary bridge.
- What does no temporary bridge look like without temporary bridge assumption? Drahota noted that each alternative will have two traffic options (an on-site temporary bridge with one lane in each direction, and no onsite temporary bridge with traffic detoured to other crossings). Catron noted that having a temporary bridge is not a forgone conclusion due to many factors (cost, mitigation considerations for parks, increased construction duration, etc). This is why each is being studied during the NEPA phase.
- Bertelsen asked if considerations for a bus-only temporary bridge during NEPA was possible.
 - Drahota noted this is being studied as part of the traffic analysis.
- Horowitz suggested developing mitigation package for all impacts outside of the Project Area for transit.
 - o Buszek agreed.

General Comments/Questions

- The next Multimodal Working Group will be discussing reliable traffic analysis options that consider transit (bus) options.
- Marchand suggested considering reroute costs, as they would be significant.
- Bertelsen noted that traffic would be rerouting also. Could temporary bus routes on adjacent bridges such as Morrison or Steel Bridges be considered?
- Bertelsen would like to consider lane conversion in WB during construction; ETC considerations.
 - o Drahota noted the current working assumption is identified in cross section slide.
 - Bertelsen would like the project team to maintain flexibility of options for bus lane.
 - o Martin noted the westbound BAT lane is not currently in an adopted plan.
 - ACTION Catron will coordinate with Sweeney to schedule a meeting with Martin (and others) to discuss reasonably foreseeable option for ETC considerations.
- Marchard noted the replacement sidewalk options seem wide.
 - Cross sections were the result of Working/Focus Groups development and CTF feedback. Cross sections are working assumption to develop NEPA.
- Marchand noted TriMet considers Burnside Bridge a valuable bridge.
- Buszek noted MLK/Grand bottleneck was a consideration for this project.

Meeting Follow Up

- Patrick Sweeney sent in the following During Construction Measure after the meeting:
 Ability to repurpose general purpose lanes ON OTHER BRIDGES for transit operations reliability and transit customer travel time convenience
- E-mail from Kathryn Levine:
 - I would like to suggest 1) an additional criteria under transit, a 12.a.3: Minimize Transit Collision Vulnerability at E Burnside/MLK and Grand Intersections.
 Qualitative assessment as to whether the bridge options create differing

Better. Safer. Connected.

intersecting geometries and lane width variations and how those may increase or decrease the likelihood of motor vehicle collisions with existing north and southbound Streetcars on MLK and Grand Avenues. Consider both through (E Burnside) as well as turning movements and their impact on the existing trackway and Streetcar dynamic envelope. Factors would include lane width, curve radii, intersection cross section, potential for conflicts between modes, anticipated weave motions, on-street parking, and likelihood of sideswipe collisions.

 2) please edit 12.b.1 to include Streetcar disruptions in the measure. "Measure: Frequency and duration of LRT, <u>Streetcar</u> and bus disruptions."

Better. Safer. Connected.

Fiscal Responsibility Notes

Subject: Joint Agency Evaluation Criteria & Measures Workshop – Fiscal Responsibility

Date: Wednesday, September 25, 2019

Attendees: Sam Hunaidi, ODOT Heather Catron, HDR Karl Dinkelspiel, Prosper Portland Steve Drahota, HDR Robert DeVassie, ODOT Lauren Wilbur, HDR

Intro

• Steve Drahota provided an overview on the project and evaluation criteria/measures.

Evaluation Criteria and Measures Overview

13a.1 - Long Term - Minimize total project cost

- Sam asked if we are taking into consideration contingencies during construction. Used Sellwood Bridge as an example. Had a significant amount of unanticipated costs, even though they were well prepared. Shouldn't this be considered in the during construction criteria breakdown?
 - Steve said that we are lumping contingencies into the total project cost as part of this measure. ROW acquisition was contemplated as a different criteria, but a decision was made to keep it in Fiscal Responsibility.

13.a.2 - Long Term - Minimize long-term maintenance effort / cost

- Steve stated that this measure mostly relates to the County's cost / maintenance / etc.
- Is the cost to fix the bridge right after the event included in this measure?
 - This was intended to be routine maintenance costs, but those costs should also be included.
 - Add language into the measure to include post-seismic repairs.

General Comments/Questions

- Peter asked about funding sources and if that was included in criteria. How do you get the public to say yes?
 - Heather described local/federal/state potential sources, and stated that she thinks getting support for the project will be crucial. How we get the money/how much the alternative costs – considered, but not included at this time. May not have enough information to do this meaningfully at this time.
- Should Greenroads be considered when looking at this criteria, or stay in the Sustainability criteria since a more sustainable bridge would likely costs more?

READY BURNSIDE BRIDGE

Earthquake Ready Burnside Bridge

Better. Safer. Connected.

- Steve noted that the contingency factor is used to capture cost increases such as this.
- Robert asked if coordination with events in the area or other projects been considered.
 - Steve stated the importance of partnering with the region. There's a lot going on at this time and in this area. This can involve an assumption built into the cost, or potentially included in the criteria/measures. May not differentiate between the alternatives. Partnering with Agencies to better understand this.
 - Sam brought up funding for both I5RQ and EQRB projects what takes priority?
 Both for contractors and funds in general.
 - Steve stated that at this point, it's unknown until there is regional information to analyze. DBE/demand for materials are also being considered, among other cost drivers.

Multnomah County is creating an earthquake-ready downtown river crossing.

October 28, 2019

Policy Group – Agenda Meeting #6

Project:	Earthquake Ready Burnside Bridge	
Subject:	Policy Group Meeting #6	
Date:	October 28, 2019	
Time:	3:00 p.m. to 5:00 p.m.	
Location:	Multnomah County Building, Board Room, 501 SE Hawthorne Blvd.	

POLICY GROUP MEMBERS

Chair Deborah Kafoury, Multnomah County Co-Chair Commissioner Jessica Vega Pederson, Multnomah County

Brendan Finn, Oregon Governor Kate Brown's Office

Chris Warner, City of Portland

Councilor Cate Arnold, City of Beaverton

Councilor Karylinn Echols, City of Gresham

Doug Kelsey, TriMet

Grace Stratton, U.S. Senator Wyden's Office

Kari Herinckx, U.S. Senator Merkley's Office

Justin Douglas, Prosper Portland

Rian Windsheimer, ODOT Region 1

Liv Brumfield, U.S. Representative Blumenauer's Office

[Pending new staff delegate], U.S. Representative

Bonamici's Office

Councilor Craig Dirksen, Oregon Metro

Representative Barbara Smith Warner, OR State Legislature

Legisiature

Senator Kathleen Taylor, OR State Legislature

Phil Ditzler, FHWA Oregon (Ex-Officio Member)

PROJECT TEAM MEMBERS

Megan Neill, Multnomah County Ian Cannon, Multnomah County Mike Pullen, Multnomah County Heather Catron, HDR Cassie Davis, HDR Steve Drahota, HDR Jeff Heilman, Parametrix Allison Brown, JLA Aascot Bohlander, Envirolssues

ADDITIONAL INVITES

[Pending CTF member delegation], Community Task Force Representative

Purpose:

- 1. Provide an update on the project progress since last meeting
- 2. Share input received from Summer/Fall Outreach efforts
- 3. Seek approval on the Range of Alternatives
- 4. Seek approval on the Evaluation Criteria

Agenda:

Time	Session	Presenter/Lead
3:00 p.m.	Welcome and Introductions	Allison Brown
3:05 p.m.	Opening Remarks	Chair Kafoury,
		Co-Chair Vega
		Pederson
3:10 p.m.	Public Comment	Allison Brown
	Meeting observers are welcome to provide comment at this meeting.	
	Time limits will be determined by number of people desiring to make	
	comment.	
3:30 p.m.	Project Update	Heather Catron
	- Working / Focus Groups	Mike Pullen
	- Stakeholder Briefings	
	- Upcoming Board of County Commissioners Meeting

	CTF Discussion:	Allicen Dresses
	How can we use the feedback and data to inform the study?	Allison Brown
6:40 p.m.	Criteria and Measures Updates – Recommendations from Agency Input	Jeff Heilman
	CTF Discussion:	Steve Drahota
	Review and discuss updates to Criteria per agency recommendations	Allison Brown
7:35 p.m.	Policy Group Recommendations	Allison Brown
	CTF Recommendations:	
	Do you agree with the Range of Alternatives moving forward?	
	Do you agree with the evaluation criteria?	
7:50 p.m.	Next Steps	Allison Brown
	Policy Group meeting ambassador	
	Issuing the Notice of Intent and Formal Scoping	
	Next CTF meeting	
	Winter outreach planning	
	Closing remarks	

The purpose of the CTF is to serve as an advisory body to Multnomah County by:

- Considering the potential environmental impacts of the alternatives
- Providing informed insights and opinions on the impacts being evaluated
- Discussing technical recommendations, suggesting measures to avoid, minimize or mitigate potential impacts
- Representing the interests, needs and opinions of community, business organizations and groups
- Considering input and information from other community members, stakeholders and interested parties.

CTF members approached by interest groups other than their own constituencies are encouraged to share these conversations at CTF meetings. For information contact Mike Pullen, County Communications Office at mike.j.pullen@multco.us
