- The efforts to maintain, clean, and analyze client data are constantly changing due to the nature of our data system. In some cases, the data from the calendar year may be more clean and resolved of duplicates than the fiscal year, or vice versa. We are doing our best to ameliorate duplicates in our system, while we navigate the challenges of maintaining a live-entry healthcare database.
- Carryover dollars are being devoted to TGA services, but the recipient has been notified that we need to transition toward spending all dollars in the year they are awarded for both Part A and Part B Program Income.
- The number of clients served by the TGA has grown in recent years, due to both resilience and well-managed HIV care, as well as an influx of people to the region.
- "Unduplicated Clients" refers to a full count of all the people served regardless of funding source. In many cases, the same client may be served both by Part A and Part B services. Unduplicated Clients means how many human beings are served in total, regardless of funding source.
- A slight increase in both Annual Labs and Viral Load Suppression has been seen in the last few years for the RW TGA as a whole.
- Demographic comparison of all people in the TGA region living with HIV and those served by the Ryan White program varies due to disproportionate distribution of poverty, rooted in racism, homophobia, and gender discrimination in our society that impact fiscal and health wellbeing.
- Smaller populations of clients (American Indian/Alaska Native and transgender people, in particular) are identified differently by our federal funder and than by our state and county health departments. Oregon's REALD and SOGI demographic data collection tools are more inclusive and therefore identify more people in these groups. For this reason, there may be more people identified as Transgender or Al/AN in our Portland Ryan White community compared to the data collected at the federal level. This is partly due to people selecting multiple racial or gender categories and the HGAP's effort to honor their identities. This year sub-recipient providers reported a variety of collaborative and referral activities- strengthening the network and acknowledging no one can provide full support on their own.
- Note the Race/Ethnicity Abbreviation Key used for all scorecards that follow.

option.

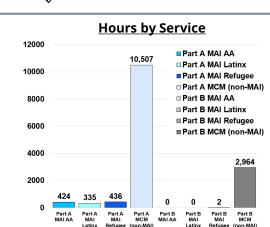

Service Utilization Data (2024-2025)

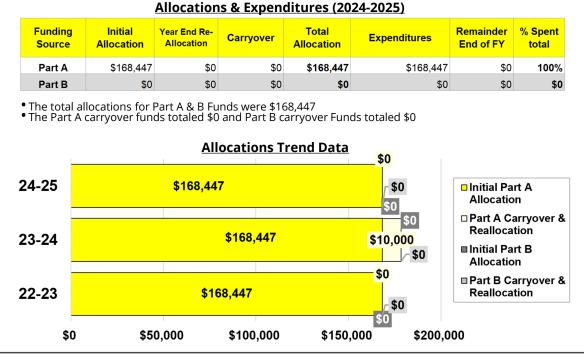

RW Clients

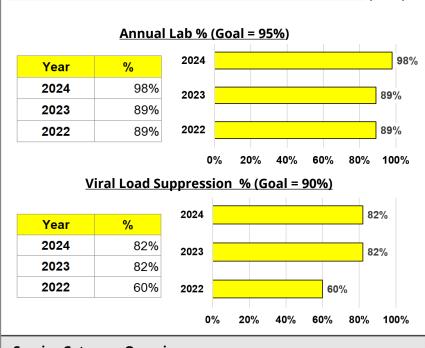

N= 1,876

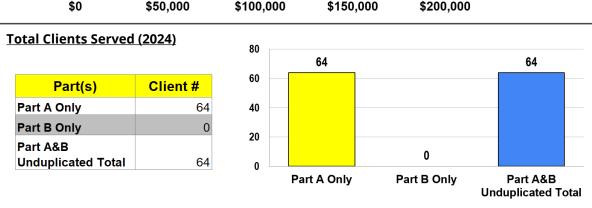

- HGAP uses a more inclusive method of identifying gender and race, resulting in higher numbers of clients who are Transgender and American Indian/Alaska Native in the Ryan White service category.
- Medical Case Management reaches the most Ryan White clients of any service, with nearly 62% of clients having been engaged by MCM in the prior year.
- Additional resources and sensitivity have been required in 2025 to support newer immigrants and other vulnerable populations.

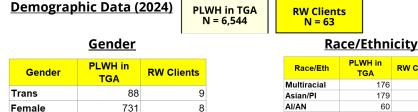

Performance Measures for Combined Part A and Part B (2024)

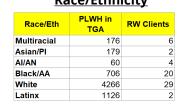

This service includes: Intensive engagement for people out of care or newly diagnosed and linkage to care for people who are newly diagnosed, a special CareLink project focused on those who are leaving incarceration systems.

79%

59%

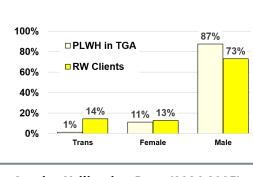

46

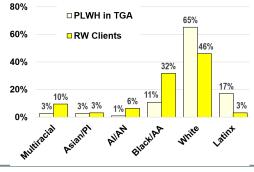

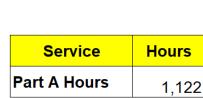

5724

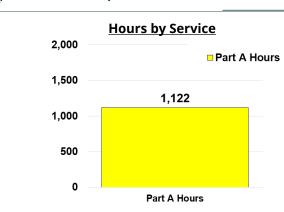

Male

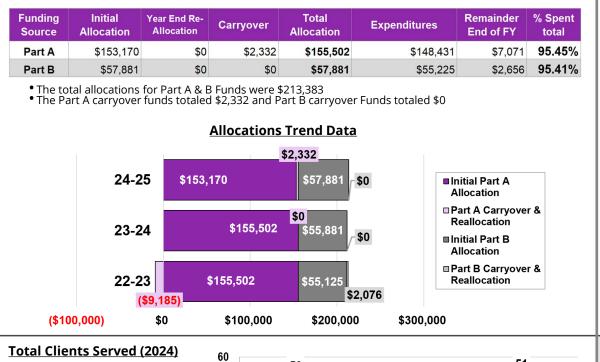

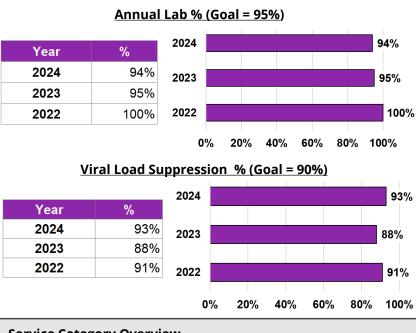

Service Utilization Data (2024-2025) **RW Clients** N = 64

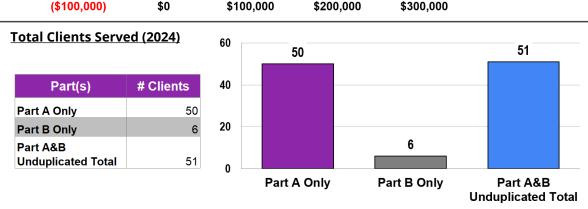

- A tri-county collaboration is focused on systems level planning for early intervention and referral.
- Staffing changes have impacted provider ability to maintain strong client connection. Provider and recipient are working to strengthen stability of service for this critical community.
- EIS clients are commonly newly diagnosed, out of care, incarcerated, and/or have lost connection to care. For this reason, they are vulnerable to nonsuppression of HIV and require additional wraparound support.

O% 20% 40% 60% 80% 100%

Service Category Overview

This service provides: peer services, referral to care, and speciality case management and support to vulnerable people who use drugs.

HGAP Insights

Non-MCM is critical to connecting clients to health and other services and tends to serve clients with great need who may be out of care. While Viral Load Suppression rates are lower than our TGA goal, we have seen an increase in Annual Lab rates. As more folks who are out of care receive their annual labs, more virally unsuppressed people are detected. Non-MCM also serves a vulnerable population of people who often need basic support services (housing, food, shelter) which influences their ability to maintain viral suppression.
