Rev 07222014 2 of 2

## **Optional Information**

While our Corbett water is excellent today, we must prepare for the future. Our single source of water is mountain streams which are totally dependent on surface runoff from seasonal precipitation and melting snowpack. Over the last few years we have experienced warmer temperatures -- 2014 being the 2nd warmest year on record since 1941 and we're seeing reduced winter snow accumulations, dryer and longer summers, plus a reduced number of storms which produce rainfall to recharge our water system. If these trends continue our water supply may become very limited.

We must to look for innovative, cost effective ways to sustain and improve our water supply. The development of a second water source which is not dependent solely on annual stream runoff and melting snowpack is critical. Earlier this year, I coauthored a grant proposal seeking federal matching funds for both ongoing and future District projects including the development of a second water source. We must continue to seek grant opportunities, both public and private, for financial assistance to supplement our capital improvements.

If elected I will use my formal education in hydrology along with my public and private sector experience to help ensure that our limited resources are best utilized and that your water rates are kept as low as possible while providing you and your family with quality water not just today, but for years to come.
