Hi Mr. Trimble,

It looks like this is written testimony for the upcoming hearing, which should be emailed to lup-hearings@multco.us. I have included them on this email.

Thanks!

Comment or Question:

Our family has lived in this area for over 75 years and Johnson Creek runs through our property. The amount of runoff being dumped into the creek has the creek at a level above all but the worst storms we have had. The amount of sediment in the water is unprecedented. The creek is usually about 6 to 8 inches deep and clear. It is now running at about 2 feet and very muddy and has been so for several weeks. This has to have an environmental impact to the natural resources of the creek and all species that live in and use the area.

Exhibit N.68
