1.0 Executive Summary

This Preliminary Site Investigation (PSI) Report (Report) summarizes the field activities and results of sub-surface sampling conducted to preliminarily characterize sediment, soil, and groundwater prior to construction activities for the Multnomah County (County) Earthquake Ready Burnside Bridge Project (the Project), County contract number DCS-SVCSGEN-857-2019-conv. Work was conducted in accordance with the *Work Plan for Geotechnical Drilling Support, Earthquake Ready Burnside Bridge Project* (Work Plan; Coles + Betts, 2021), the Oregon Department of Transportation (ODOT) *Hazmat Program Manual* (2020), and environmental procedures outlined in the *Hazardous Waste Guide for Project Development* by American Association of State Highway and Transportation Officials (AASHTO, 1990), on behalf of the County and their design consulting team, led by HDR, Inc.

A Draft Hazardous Materials Corridor Assessment (HMCA) was performed by Shannon & Wilson (SW) for the Project area (SW, 2021a). The HMCA identified sites with known and suspected contamination within and adjoining the Project corridor. The identified contamination is expected to impact the majority of soils, Willamette River sediment, and/or if encountered, fill material and groundwater within the Project area. The HMCA recommended environmental monitoring at each geotechnical boring location.

SW, the contract geotechnical engineering firm, coordinated and oversaw the geotechnical drilling both on land and in water. In accordance with SW's Work Plan (SW, 2021b), Coles + Betts Environmental Consulting, LLC (CB), Apex Companies, LLC (Apex) and Reynolds Engineering, LLC (Reynolds; collectively the CB team) completed hazardous materials monitoring at all borings between zero and 25 feet below ground surface (bgs) or until the fill/native interface was reached in upland borings, and within the upper 25 feet of sediment of the Willamette River. The CB team completed hazardous materials monitoring at 15 locations on land and 12 locations within the Willamette River (i.e., in-water) between September 8, 2021, and October 25, 2021.

Soil and fill material samples were generally collected from each Standard Penetration Test (SPT) sampler utilizing a hollow-stem auger for upland borings; though some locations were drilled using direct-push or sonic rigs due to drill rig clearance issues. Sediment samples were collected into disposable tubes utilizing a sonic drill rig. Groundwater was sampled using a peristaltic pump and disposable tubing or a disposable bailer. The CB team collected a total of 23 upland soil samples, 8 groundwater samples from upland borings, 21 sediment samples and 10 groundwater samples from in-water borings.

Upland soil and/or fill material samples and groundwater samples were submitted under Chain-of-Custody protocols to Apex Laboratories, LLC (Apex Labs) of Tigard, Oregon, for laboratory analysis. The samples were analyzed for the following compounds at a sensitivity that allows for comparison to Oregon Department of Environmental Quality (DEQ) Clean Fill Criteria and Risk-Based Criteria (RBCs) (DEQ, 2018):

- Gasoline-range petroleum hydrocarbons by Northwest Total Petroleum Hydrocarbons (NWTPH)-Gasoline (Gx) Method;
- Diesel- and residual-range petroleum hydrocarbons by NWTPH-Diesel (Dx) Method;
- Volatile Organic Compounds (VOCs) by U.S. Environmental Protection Agency (EPA) Method 8260B;

-
- Polycyclic Aromatic Hydrocarbons (PAHs) by EPA Method 8270 SIM; and
 - Total Resource Conservation and Recovery Act (RCRA) 8 metals plus total antimony, copper, and zinc for soil, and dissolved RCRA 8 metals for groundwater. The metals will be analyzed by EPA Methods 200/6020A/7471B.

In-water sediment, fill material, and groundwater samples collected were submitted under Chain-of-Custody protocols to ALS Environmental (ALS) in Kelso, Washington, for laboratory analysis. The samples were analyzed for the following compounds at a sensitivity that allows for comparison to DEQ Clean Fill Criteria and RBCs:

- Gasoline-range hydrocarbons using Method NWTPH-Gx;
- Diesel- and residual oil-range hydrocarbons using Method NWTPH-Dx;
- VOCs using EPA Method 8260B;
- PAHs using EPA Method 8270D-SIM;
- Low-level Semi-Volatile Organic Compounds (SVOCs) using EPA Method 8270D;
- Low-level organochlorine pesticides using EPA Method 8081B;
- Polychlorinated Biphenyls (PCBs) using EPA Method 8082A;
- Chlorinated herbicides using EPA Method 8151A;
- Polychlorinated dibenzodioxins (PCDDs) and Polychlorinated dibenzofurans (PCDFs) by EPA Method 8290A;
- Butyltins; and
- RCRA 8 metals using EPA Methods 200/6020A/7471B.

Soil, sediment, and groundwater analytical results were compared to DEQ's RBCs to determine the presence or absence of contamination and identify construction and excavation worker direct contact safety concerns, and were also compared to DEQ's Clean Fill Criteria (DEQ, 2019) to inform decisions regarding how contaminated soil and/or groundwater should be handled and disposed of during construction activities. In addition, because of the Project location upstream of the Portland Harbor Superfund Site, sediment data were also compared to Portland Harbor (PH) Record of Decision (ROD) Cleanup Levels (CULs), Freshwater Benthic Toxicity Screening Levels (Sediment Evaluation Framework, 2018), and Willamette River Upstream Background Concentrations (Portland Harbor RI/FS, 2016). This additional comparison was completed to evaluate potential effects on construction within the Project area (including potential sediment scour) on the Portland Harbor Superfund Site.

No concentrations of contaminants of concern (COCs) were detected at concentrations exceeding Construction or Excavation Worker RBCs in the samples collected from the west end of the Burnside Bridge. Several of the soil samples collected from the west end of the Bridge contained metals and petroleum constituents at concentrations exceeding Clean Fill Criteria. However, the factor of exceedance in many cases was less than an order of magnitude. Samples collected from bulk spoils material at the time of construction may meet Clean Fill Criteria.

At the east end of the bridge, lead was detected at concentrations exceeding the Clean Fill Criteria in the samples collected from borings B-16, B-17, and boring B-18. No lead concentrations exceeded the direct contact RBCs for the Construction or Excavation Worker scenarios. However, because lead concentrations in 4 samples exceeded 100 milligram per kilogram (mg/kg), those samples were submitted for additional lead analysis Toxicity Characteristic Leaching Procedure (TCLP). Results of the samples submitted for TCLP analysis were all less than 5 milligram per liter (mg/L) and indicate that the material would not require disposal as hazardous waste. Soils in this area will need to be disposed of as special waste.

The only upland soil sample containing concentrations of any analyzed constituent that exceeded the direct contact RBCs was the soil sample collected from boring B-33 from 15 to 16.5 feet bgs on the east side of the bridge. This sample interval was observed to have free petroleum product during drilling, and laboratory analytical results of diesel and residual-range organics in the sample both exceed the Construction Worker direct contact RBC of 4,600 mg/kg, at 27,400 mg/kg and 26,000 mg/kg, respectively. Soils from this area will require special management, including worker safety precautions, and should be segregated and managed separately for disposal purposes. A Contaminated Media Management Plan is recommended for soils on the eastern end of the bridge.

Analytical results of sediment samples collected indicate that one or more COC was detected at a level exceeding Clean Fill Criteria in 10 of the 12 borings completed within the Willamette River. The most common analytes detected at concentrations exceeding Clean Fill Criteria were arsenic, mercury, lead, phthalates, dibenzofuran, PAHs and PCBs. No analytes were detected at concentrations exceeding DEQ RBCs for the Construction or Excavation Worker direct contact scenarios, so there is no excess risk posed to construction or excavation workers due to exposure to sediments during Project construction. Based on contaminant concentrations detected, it may be possible for bulk dewatered sediment to be used as clean fill.

Although in-water boring B-38 was not completed as planned due to site access issues, this does not appear to be a significant data gap. We compared the sediment analytical data for the samples collected from borings B-39 (directly upstream from planned boring B-38), B-37 (west of B-39) and B-36 (downstream of B-37). In general, analyte concentrations in samples collected from the three borings were very similar (Table 4). For TPH, VOCs, PAHs and SVOCs, concentrations detected in samples collected from boring B-37 were generally lower than those collected from boring B-36 from the same depth interval (i.e., comparing the 0-10 feet composite samples and the 10-plus feet below surface samples separately), and concentrations detected in the samples collected from borings B-36 and B-39 were the most similar. Conversely, concentrations of metals, dioxins/furans and PCBs were generally higher in the samples collected from boring B-37 than in those collected from borings B-36 or B-39. PCBs were only detected in the sample collected from boring B-37 from 0-10 feet below the sediment interface. The concentrations of butyltins, organochlorine pesticides and chlorinated herbicides were all similar between the sample locations

Groundwater samples were collected from 8 upland borings and 10 in-water borings. No groundwater constituents analyzed were detected at concentrations exceeding DEQ RBCs for groundwater in excavations or the daily discharge maximum local limit (City of Portland Bureau of Environmental Services Sanitary Discharge and Pretreatment Program Administrative Rules (ENB - 4.03), June 2016). The concentrations of

diesel-range organics detected in all in-water samples collected exceeded the PH ROD CUL of 2.6 microgram per liter ($\mu\text{g/L}$), ranging from 120 to 990 $\mu\text{g/L}$. There does not appear to be a discharge limit for diesel-range organics imposed by the City of Portland, nor is there an RBC established for diesel-range organics for the groundwater in an excavation exposure scenario. If dewatering is necessary in the area of boring B-33, groundwater samples from the purged water should be collected to determine appropriate disposal options.

We understand that bridge components evaluated during the design phase for the Project may result in sediment scour. The COC concentrations detected within the Project area are generally much lower than those detected within the Portland Harbor Superfund Site. Given that most of Portland Harbor will achieve CULs only after decades of natural recovery, chemical impacts from the bridge scour to downstream sediments would likely be negligible. If a specific design will result in sediment scour, we recommend environmental sampling in the expected scour zone to characterize the sediments that would get scoured.

2.0 Introduction

2.1 Purpose

The purpose of this PSI is to present the results of the sediment, soil and groundwater sampling activities conducted in September and October 2021. These activities were conducted to evaluate potential impacts to Project construction related to potential contaminant sources identified in the HMCA for the Project.

2.2 Scope of Work

The scope of work was completed in general accordance with the Work Plan, dated July 14, 2021, with the exception noted that boring B-38 was not completed by SW as planned and boring B-14 was moved upland due to site access constraints. The purpose of the sampling scope of work was to preliminarily characterize soil, sediment, and groundwater prior to Project construction activities. The analytical results of samples collected will be used to characterize subsurface materials (soil, groundwater, and sediment) for disposal in areas of planned excavation and dewatering and were used to conduct a screening-level risk assessment in accordance with DEQ guidelines.

The geotechnical drilling support included the following tasks:

- Preparation of the hazmat sampling Work Plan to provide rationale for and to guide field activities;
- Preparation of a site-specific health and safety plan (HASP) for CB personnel to identify potential job hazards and protect worker safety;
- Environmental sampling of soil, sediment, and if encountered, fill materials and groundwater from geotechnical borings sufficient to determine whether or not contaminants of concern are present;
- Manage investigation derived waste (IDW) generated from the drilling activities within the upper 25 feet bgs (or deeper as necessary) in accordance with applicable local, state, and federal regulations and permits;

-
- Evaluate the potential impact of future construction within the Project Area (particularly with respect to sediment scour) as it relates to the Portland Harbor Superfund Site; and
 - Preparation of this PSI Report that summarizes investigation efforts and provides recommendations for management of soils, sediment, fill material, groundwater, and IDW.

These activities are discussed in further detail within this report.

3.0 Background

A detailed site history for the corridor, including a description of past and present land use based on available historical documentation is presented in the HMCA. A brief summary of pertinent information follows.

3.1 Site Location and Description

The Project area is in Portland, Multnomah County, Oregon, along the Burnside Bridge alignment and on both banks of the Willamette River (Appendix A and Figure 1). The Project area, from west to east, is along W Burnside Street from SW/NW 2nd Avenue to the western Willamette River bank, below the Willamette River, and along E Burnside Street from the eastern bank of the Willamette River to the City block between NE Couch Street and SE/NE Martin Luther King Jr Blvd (Appendix A).

The Project intends to seismically upgrade the Burnside Bridge so that it remains operational and accessible for vehicles and other modes of transportation immediately following a major Cascadia Subduction Zone (CSZ) earthquake, and to provide long-term, low-maintenance, multi-modal (motor vehicle, bus, streetcar, bike, and pedestrian) transportation on a daily basis.

3.2 Site Geology and Hydrogeology

According to the United States Geological Survey (USGS) 7.5-minute Portland, OR Quadrangle Map, the Project area is at an elevation of between 0 and 65 feet above mean sea level. The local topography generally slopes toward the Willamette River from the east and west. The Willamette River is the center of the Project area and is the only water body in the Project area. The Burnside Bridge spans the Willamette River at a height of approximately 66 feet above the water and is approximately 2,241 feet long and 86 feet wide.

Based on the local topography and proximity of the Willamette River, local groundwater is presumed to flow generally towards the Willamette River from the east and west in the immediate vicinity of the river. However, local subsurface geologic and manmade features can affect groundwater flow and this groundwater flow interpretation is only an estimate based on surface observations.

Water well records filed with the Oregon Water Resources Department (OWRD) were searched and revealed over 3,000 well records within a half mile of the Project; however, none appeared to be groundwater production wells currently in use. Records consisted of geotechnical borings, groundwater monitoring wells,

and water resource wells. Groundwater monitoring wells were generally drilled to depths of less than 30 feet bgs and geotechnical borings were generally drilled to depths of less than 60 feet bgs. Groundwater was generally encountered at depths of between 15 feet and 25 feet bgs.

Surficial materials within the Project area commonly consist of various fill materials to depths of 25 feet or more because of the long history of industrial, commercial, and residential use of the Project area. Underlying the fill materials are fine-grained sand, silt, and clay catastrophic flood sedimentary deposits of The Willamette Silt formation. These sediments were deposited by catastrophic floods that swept across eastern Washington, the Columbia River Gorge, and into the Willamette Valley near the end of the last ice age. Below the catastrophic flood deposits are the gravels and cobbles of the Troutdale Formation which overlie the Miocene bedrock basalt of the Columbia River Basalt Group.

3.3 Conceptual Site Model

Our baseline conceptual site model (CSM) for the Project was developed based on the findings from the HMCA. The HMCA identified sites with known and suspected contamination within and adjoining the Project area and recommended environmental monitoring at all boring locations. Worker exposure to contaminated soil, sediment and fill material, and groundwater management during Project construction activities are Project concerns. Contamination from historical and/or current operations and activities, spills, and placement of contaminated fill materials has been documented within the Project area.

Potential COCs for Project upland soils, sediment, fill materials, and groundwater include: petroleum products, VOCs, PAHs, and metals. Potential additional COCs for sediment, fill materials, and groundwater for in-water borings include: SVOCs, organochlorine pesticides, PCBs, chlorinated herbicides, PCDDs and PCDFs, butyltins, and metals. Potential exposure pathways for contaminated fill, soils, sediment, and groundwater include dermal contact, ingestion, and inhalation.

3.4 Data Quality Objectives

The following data quality objectives for the PSI intend to address uncertainties identified in the CSM:

- Characterize soils, sediment and fill material up to 25 feet bgs (or to the fill/native soil interface in upland borings if deeper) and, if encountered, groundwater, to determine the concentrations of potential COCs;
- Compare upland soil and fill material analytical results to the DEQ RBCs and Clean Fill Criteria and provide management recommendations;
- Compare sediment analytical results to Benthic Toxicity Screening Levels from Sediment Evaluation Framework (RSET, 2018), Portland Harbor ROD CULs), and Willamette River upstream background concentrations from the Portland Harbor RI/FS (EPA, 2016).
- Compare all Project area groundwater analytical results to DEQ RBCs and any municipal sewer or discharge regulations and provide management recommendations; and
- Update the CSM and evaluate the need for follow on action.

4.0 Site Investigation Activities

4.1 Preparatory Activities

The following preparatory activities were completed before conducting the site investigation activities.

4.1.1 Site Health and Safety Plan

A site-specific HASP was prepared for the site investigation activities and provided as an attachment to the Work Plan. The HASP was prepared in general accordance with the Occupational Safety and Health Administration (OSHA) and the Oregon Administrative Rules (OAR). A copy of the HASP was maintained on-site during the field activities. Prior to performing any on-site work, the CB team prepared a Job Safety Analysis (JSA) guiding task-specific activities, risks, and safety protocols for each task. All CB field staff supporting the Project were required to review and follow the HASP and JSAs. A daily meeting was conducted with the field crew and drilling subcontractor prior to initiating work.

4.1.2 Site Access and Underground Utility Location

Prior to drilling activities, SW, the geotechnical subcontractor for the Project, coordinated the site access to the sampling areas and managed utility clearance.

4.2 Soil Boring Methods and Procedures

The CB team completed hazardous materials sampling and oversight of geotechnical borings at 15 upland and 12 in-water borings between September 9, 2021, and October 25, 2021. During that time, representatives of the CB team were on-site during geotechnical explorations conducted by SW to collect soil, sediment, and groundwater samples. As a subcontractor to SW, Western States Soil Conservation (Western States) performed the geotechnical drilling services. The in-water geotechnical borings were advanced from a barge in the river using a sonic drilling rig. Western States generally used a hydraulic push or hollow-stem auger rig to advance upland borings to the depth of environmental sampling. Upland borings B-21, B-22, B-23, B-32 and B-33 were completed with a sonic drill rig due to site constraints. Attempts were made to vacuum clear the majority of upland borings to 10 feet bgs.

CB team field personnel collected samples at a minimum 5-foot interval from each boring. The approximate locations of the explorations are included on Figures 2, 3 and 4 of this report, and on the SW Explorations Plan in Appendix A. Soil boring logs are included in Appendix B, and a photo log containing photographs of drilling and sampling activities is included as Appendix C.

Sediment and soils recovered from the borings were field screened for the presence of VOCs using a handheld photoionization detector (PID) and observations were made with respect to odor, discoloration, sheen, presence of fill materials, etc., that may have indicated the presence of soil contamination. Soil cores were extracted, and soil lithology and conditions were logged in general accordance with ASTM 2487/2488.

The split spoons were decontaminated between each use by cleaning with a solution of phosphate-free soap and triple rinsed with distilled water to avoid cross-contamination.

If field screening indicating a contaminated zone of soils and/or fill material was encountered, samples were collected from “worst case” contaminated soils and/or fill material and soils and/or fill material below the contaminated zone that did not exhibit contamination.

Groundwater samples were collected with a disposable bailer or a peristaltic pump and disposable tubing. Dissolved metals groundwater samples were field filtered using a 0.45- micron filter.

Soil, fill materials, sediment and groundwater samples were placed into clean laboratory-supplied containers. Field personnel donned clean nitrile gloves prior to collecting each sample. Samples were labeled and maintained in a cooler of ice at 4 ± 2 degrees Celsius ($^{\circ}\text{C}$) and transported to the laboratory under Chain-of-Custody protocols.

All explorations were abandoned in accordance with OWRD regulations after sampling.

4.3 Analyses Performed

A total of 23 soil and/or fill, 21 sediment, and 18 groundwater samples were collected and analyzed for the Project. Included in the analyses was the soil sample collected from the zone containing free product (heavy oil) in boring B-33 (please see Section 5.1.1).

Upland soil and/or fill material samples and groundwater samples were submitted to Apex Labs of Tigard, Oregon, for laboratory analysis. The samples were analyzed for the following compounds at a sensitivity that allows for comparison to DEQ Clean Fill Criteria and RBCs:

- Gasoline-range petroleum hydrocarbons by NWTPH-Gx Method;
- Diesel- and residual-range petroleum hydrocarbons by NWTPH-Dx Method;
- VOCs by EPA Method 8260B;
- PAHs by EPA Method 8270 SIM; and
- Total RCRA 8 metals plus total antimony, copper, and zinc for soil and dissolved RCRA 8 metals for groundwater. The metals will be analyzed by EPA Methods 200/6020A/7471B.

In-water sediment, fill material, and groundwater samples collected were submitted under Chain-of-Custody protocols to ALS in Kelso, Washington, for laboratory analysis. The samples were analyzed for the following compounds at a sensitivity that allows for comparison to DEQ Clean Fill Criteria and RBCs:

- Gasoline-range hydrocarbons using Method NWTPH-Gx;
- Diesel- and residual oil-range hydrocarbons using Method NWTPH-Dx;
- VOCs using EPA Method 8260B;
- PAHs using EPA Method 8270D-SIM;
- Low-level SVOCs using EPA Method 8270D;

-
- Low-level organochlorine pesticides using EPA Method 8081B;
 - PCBs using EPA Method 8082A;
 - Chlorinated herbicides using EPA Method 8151A;
 - PCDDs and PCDFs by EPA Method 8290A;
 - Butyltins; and
 - RCRA 8 metals using EPA Methods 200/6020A/7471B.

Laboratory analytical reports are included in Appendix D.

4.4 Investigation-Derived Waste

IDW consisted of decontamination/purge water and soil cuttings (including cuttings from vacuum utility clearance activities). Soil and water IDW were containerized in properly labeled ODOT-approved drums pending receipt of analytical results and waste profiling for disposal. Sampling materials and personal protective equipment (PPE) were disposed of as solid waste.

4.4.1 Environmental Monitoring IDW

A total of 26 drums were generated during hollow stem and direct-push drilling, as well as during vacuum clearance. Drum contents included drill cuttings and water used when vacuuming boring locations. Twelve of the drums containing vacuumed soil were directly characterized for disposal, while the results of field samples collected were used for characterizing the remaining drums. IDW soil analytical results are summarized in Table 6. The drums were characterized as non-hazardous waste. The Project drum IDW log is presented in Appendix E.

All drums were stored at the Multnomah County maintenance facility at 1620 SE 190th Ave pending disposal. The drums were disposed by WasteXpress on January 21, 2022. The non-hazardous waste manifests are presented in Appendix E.

4.4.2 Geotechnical Drilling IDW

A total of 114 drums were generated during geotechnical drilling of borings that did not have environmental oversight and of borings that did have environmental oversight from surface to 25 feet bgs. Drum contents included bentonite slurry, soil cuttings, and decontamination water. A drum log and supporting laboratory reports were provided by SW and are presented in Appendix F. No evidence of gross contamination was reported by SW. Environmental results from samples collected when using mud rotary drilling methods should be used with caution due to potential cross-contamination from drilling mud.

Geotechnical drilling drums were also stored at the Multnomah County maintenance facility at 1620 SE 190th Ave pending disposal. The drums were disposed by WasteXpress on October 28, 2021 (16 drums), December 8, 2021 (30 drums), and January 21, 2022 (68 drums). Non-hazardous waste manifests provided by SW are presented in Appendix F.

5.0 Site Investigation Results

5.1 Field Observations

Soil boring logs are included in Appendix B. Photographs taken during drilling activities are included in Appendix C.

5.1.1 Upland Borings

Field observations during environmental monitoring of the upper 25 feet from borings on both the east and west sides of the river indicate that fill materials are present from the surface to depths of 10 to over 25 feet bgs. At boring locations where the upper 10 to 15 feet were vacuum cleared for utilities, those soils were not field screened because they were within the vacuum truck tank and were later placed directly into drums for disposal (see *Section 4.4*). Fill materials included silts, sands and silty gravels with brick and wood pieces. Native materials encountered in upland borings consisted primarily of sand and silt, with occasional gravel. Free petroleum product was present in boring B-33 at a depth of 15 feet bgs on the east side of the river, within the area historically occupied by a lumber mill. Fill was present to a depth of 22.5 feet bgs at this location. No odor or staining were observed deeper than 25 feet. Free product was not encountered in any of the surrounding borings B-16, B-17, B-15 or B-32, or any other boring location. A slight petroleum odor was noted in boring B-18, approximately 200 feet to the east, at a depth of 12 to 16.5 feet bgs. No elevated PID readings were noted at this location. An organic sheen and odor were noted at boring B-8 near the west bank of the river; however elevated PID readings were not observed.

No other elevated PID readings or visual or olfactory evidence of contamination were noted in any of the upland borings. Groundwater was present in 8 of the upland borings, at depths ranging from 10 to over 25 feet bgs. No sheen or other evidence of contamination was noted during groundwater sample collection.

5.1.2 In-Water Borings

No suspect fill materials were encountered during barge drilling. Sediments observed included primarily fine-to-coarse sand with varying amounts of silt and gravel. No sheen or odors were noted during drilling. One slightly elevated PID reading of 7.5 ppm was noted at a depth of 2 feet below the sediment surface in boring B-39. Groundwater was encountered in each of the borings and groundwater samples were collected from 10 of the borings. No sheen or other evidence of contamination was noted during groundwater sample collection.

5.2 Analytical Results

The analytical results of samples collected during the investigation are summarized in Tables 1 through 8 and on Figures 2 through 4. Laboratory analytical reports are included in Appendix D. The soil, fill and sediment results were screened against DEQ Clean Fill Criteria for soil to evaluate the material for re-use or disposal. Soil, fill, sediment, and groundwater analytical results were also compared to DEQ's RBCs for the

Construction and Excavation Worker Direct Contact scenarios to evaluate potential future worker safety concerns. In addition, because of the Project location upstream of the Portland Harbor Superfund Site, sediment data were also compared to Portland Harbor ROD CULs, Freshwater Benthic Toxicity Screening Levels, and Willamette River Upstream Background Concentrations.

Groundwater concentrations were screened against DEQ RBCs for Groundwater in Excavations – Construction/Excavation Worker scenario and the daily discharge maximum local limit (City of Portland Bureau of Environmental Services Sanitary Discharge and Pretreatment Program Administrative Rules (ENB - 4.03), June 2016). A discussion of the soil, sediment, and groundwater results is provided below.

5.2.1 Soil and Fill Analytical Results

Analytical results of soil and fill samples collected from borings B-5, B-6, B-7, B-8, B-21, B-22, and B-23 on the west bank of the river indicate that one or more constituents was detected at a level exceeding Clean Fill Criteria in 5 of the 7 borings (Figure 2 and Tables 1, 2 and 7). Arsenic was detected at levels exceeding the Clean Fill Criteria of 8.8 mg/kg in samples collected from borings B-5, B-21, and B-22, ranging from 9.38 to 11.4 mg/kg. Lead was also detected at a level exceeding Clean Fill Criteria of 28 mg/kg at 34.9 mg/kg in the sample collected from boring B-21 from 0-10 feet bgs. The concentration of copper detected in the sample collected from 6-10 feet bgs from boring B-23 (39.6 mg/kg) exceeded the Clean Fill Criteria of 34 mg/kg.

Concentrations of petroleum constituents benzene, naphthalene, and several PAHs detected in boring B-8 from both the 8-10 foot bgs interval and the 15-21.5 foot bgs interval exceeded their respective Clean Fill Criteria. No concentrations were detected in any of the samples collected from the west bank of the river that exceeded DEQ RBCs.

Seven soil borings (B-15, B-16, B-17, B-18, B-19, B-32, and B-33) were completed on the east bank of the river (Figure 3 and Tables 1, 2 and 7). Analytical results of soil samples collected indicate that one or more constituents was detected at a level exceeding Clean Fill Criteria in 4 of the 7 borings. Lead was detected at concentrations exceeding the Clean Fill Criteria of 28 mg/kg in the samples collected from borings B-16 (340 mg/kg in the 0-10 feet bgs sample and 34.1 mg/kg in the 10-20 feet bgs sample), B-17 (32.4 mg/kg in the 0-10 feet bgs sample and 110 mg/kg in the 10-25 feet bgs sample), and boring B-18 (106 mg/kg in the 0-10 feet bgs sample and 245 mg/kg in the 10-26 feet bgs sample). No lead concentrations exceeded the direct contact RBCs for the Construction or Excavation Worker scenarios; however, because lead concentrations in 4 samples exceeded 100 mg/kg, those samples were submitted for additional lead analysis by the TCLP. This is required under 40 CFR 261.24, which states that soil lead concentrations over 100 mg/kg may be hazardous and require additional testing by the TCLP procedure to determine whether they are classified as hazardous or non-hazardous for disposal. TCLP results greater than 5 mg/L lead are designated hazardous for disposal purposes. Results of the samples submitted for TCLP analysis were all less than 5 mg/L and indicate that the material would not require disposal as hazardous waste.

Mercury was also detected at a concentration of 7.11 mg/kg in the soil sample collected from boring B-18 from the 10-26 feet bgs interval. This concentration exceeds the limit of 4 mg/kg stated in 40 CFR 261.24, over which additional testing by TCLP is required to determine whether the material must be designated

hazardous for disposal purposes. TCLP results greater than 0.2 mg/L for mercury are designated as hazardous for disposal purposes. The TCLP result for the sample collected from B-18 from the 10-26 feet bgs interval was non-detect, with a detection limit well below 0.2 mg/L at 0.007 mg/L. Therefore, the material is non-hazardous for disposal purposes.

Other metals and PAHs were also detected at levels exceeding Clean Fill Criteria in the samples collected from borings B-16, B-17 and B-18 (Figure 3). The only upland soil sample containing concentrations of any analyzed constituent that exceeded the direct contact RBCs was the soil sample collected from boring B-33 from 15 to 16.5 feet bgs. This sample interval was observed to have free petroleum product during drilling, and laboratory analytical results of diesel and residual-range organics in the sample both exceed the Construction Worker direct contact RBC of 4,600 mg/kg, at 27,400 mg/kg and 26,000 mg/kg, respectively.

5.2.2 Sediment Analytical Results

Twelve borings (B-24, B-25, B-26, B-28, B-29, B-30, B-31, B-34, B-35, B-36, B-37, and B-39) were completed within the Willamette River (Figure 4 and Tables 4 and 8). Analytical results of sediment samples collected indicate that one or more constituents was detected at a level exceeding Clean Fill Criteria in 10 of the 12 borings. The most common analytes detected at concentrations exceeding Clean Fill Criteria were arsenic, mercury, lead, phthalates, dibenzofuran, PAHs and PCBs. No analytes were detected at concentrations exceeding DEQ RBCs for the Construction or Excavation Worker direct contact scenarios.

5.2.3 Groundwater Analytical Results

Groundwater samples were collected from 8 upland borings (Table 3) and 10 in-water borings (Table 5). No groundwater constituents analyzed were detected at concentrations exceeding DEQ RBCs for groundwater in excavations or the daily discharge maximum local limit (City of Portland Bureau of Environmental Services Sanitary Discharge and Pretreatment Program Administrative Rules (ENB - 4.03), June 2016). The concentrations of diesel-range organics detected in all in-water samples collected exceeded the PH ROD CUL of 2.6 µg/L, ranging from 120 to 990 µg/L.

6.0 Data Quality Evaluation

Laboratory data quality was reviewed to determine usability for the preliminary characterization of sediment, soil, and groundwater prior to construction activities for the Project. The data quality review included evaluation of the laboratory data packages provided by Apex Labs and ALS for the following parameters.

- Chain-of-custody and sample handling procedures.
- Appropriate analytical preparation and quantitation methods to address data quality objectives.
- Holding time violations.
- Detection limit exceedances of screening criteria.
- Method blank detections.

-
- Laboratory quality assurance and quality control (QA/QC) samples including laboratory control samples and their duplicates (LCS/LCSD), matrix spike and their duplicates (MS/MSDs), and laboratory duplicates.
 - Surrogate recoveries.

Qualifiers were used to identify data that is estimated due to deficiencies in data quality. A summary of usability is provided below.

6.1 Soil and Groundwater (Upland Borings)

Data that were determined to be outside of quality control limits are discussed below. Overall data quality for soil results was acceptable for the intended use.

- Samples were generally received by the laboratory at $4\pm 2^{\circ}\text{C}$ with the exception of laboratory report A110192. Samples were received on ice and within three hours of sampling; therefore, sample data is still acceptable for use and results were not flagged.
- For VOCs, the compounds chloroethane, 1,2-dibromo-3-chloropropane, dichlorodifluoromethane, naphthalene, styrene, and 1,2,4-trichlorobenzene were recovered below the lower control limit for analytical batch LCS and/or LCSDs. These compounds were not detected in the affected soil samples and results are 'UJ' flagged as estimated non-detections at the reported method detection limit (MDL).
- The surrogate recovery for gasoline-range hydrocarbons for soil samples B-33 at 15-16.5 and 10-26.5 feet bgs was above the upper control limit. Results are 'J+' flagged as estimated values that may be biased high.
- The surrogate recoveries for residual-range hydrocarbons and PAHs for groundwater sample B-7 were below the lower control limit. Detected results are 'J-' flagged as estimated values that may be biased low and not detected results are 'UJ' flagged as estimated non-detections at the reported MDL.

6.2 Sediment

Sediment data was generally acceptable but did include numerous holding time violations, surrogate failures, method blank samples with contamination, and laboratory QA/QC samples outside of control limits. A summary of data quality issues for sediment data are provided below.

- Sediment samples for boring B-30 were received slightly above 6°C but were chilled on ice immediately after sampling. The sample receiving temperature is not suspected to significantly influence results and no data was flagged.
- Samples were extracted or analyzed out of hold for VOCs for boring B-24, chlorinated pesticides and herbicides for boring B-25, and butyltins for sediment samples B-24 at 10-20 feet bgs, B-26 at 0-10

and 10-25 feet bgs, and B-25 at 0-10 and 10-25 feet bgs. These results should be considered estimated.

- Method blank samples with target analyte detections that are more than ten times the concentration found in the associated sediment sample indicate that laboratory contamination may have significantly contributed to the concentration found in sediment. These results are 'J+' flagged as estimated values that may be biased high.
- LCS/LCSD and MS/MSD recoveries and RPDs were reviewed, and associated sediment data were flagged as appropriate.
- Surrogate recoveries were reviewed and sediment samples with exceedances of control limits were flagged as appropriate.
- Target analyte identification for some detected dioxin/furans, chlorinated pesticides, and chlorinated herbicides could not be confirmed using method criteria. These results are 'NJ' flagged as analytes that may or may not be present in the sediment sample; however, these are included as detections for the purposes of being protective of human health and the environment.

6.3 Groundwater (In-Water Borings)

Laboratory data quality for groundwater at in-water boring locations was generally acceptable but did include holding time violations, surrogate failures, method blank samples with contamination, and laboratory QA/QC samples that were outside of control limits. A summary of data quality issues is provided below.

- Groundwater sample B-30 was received slightly above 6°C but was chilled on ice immediately after sampling. The sample receiving temperature is not suspected to significantly influence results and no data was flagged.
- Samples were extracted or analyzed out of hold for PAHs for B-31, chlorinated pesticides for B-36, B-39, B-37, B-34, and B-29 are highlighted as gross exceedances since samples were extracted more than 12 weeks outside of the 7-day holding time. All results associated with out of hold extraction or analysis are not considered representative of field conditions and are 'J' flagged for detected values and 'UJ' flagged for not detected values..
- Method blank samples with target analyte detections that are more than ten times the concentration found in the associated groundwater sample indicate that laboratory contamination may have significantly contributed to the concentration found in sediment. These results are 'J+' flagged as estimated values that may be biased high.
- LCS/LCSD and MS/MSD recoveries and RPDs were reviewed, and associated groundwater data were flagged as appropriate.
- Surrogate recoveries were reviewed and groundwater samples with exceedances of control limits were flagged as appropriate.
- Target analyte identification for some detected dioxin/furans, chlorinated pesticides, and chlorinated herbicides could not be confirmed using method criteria. These results are 'NJ' flagged as analytes that may or may not be present in the groundwater sample; however, these are included as detections for the purposes of being protective of human health and the environment.

Overall data quality was acceptable for use for this Project. Data that is estimated or may be biased high or low is appropriately flagged in the tables provided in this report. However, holding time exceedances for groundwater samples from in-water borings B-36, B-39, B-37, B-34, and B-29 for chlorinated pesticides are considered gross exceedances and may not be representative of actual field conditions. Detections of chlorinated pesticides for in-water borings that were extracted and analyzed within the recommended holding time did have trace detections of chlorinated pesticides, but concentrations did not exceed the applicable RBC. Sediment from in-water borings B-36, B-39, B-37, B-34, and B-29 also did not exceed applicable RBCs, Clean Fill Criteria, Hazardous Waste Toxicity Characteristic, Freshwater Benthic Toxicity Screening Level, Portland Harbor ROD CULs, or Willamette River Upstream Background Concentrations. Based on chlorinated pesticide data from groundwater from in-water borings that was within the holding time and the associated sediment data for the affected borings, it is likely that chlorinated pesticides are not a risk to human health or the environment and the holding time exceedance is not a data gap.

7.0 Conclusions and Recommendations

7.1 Soil Recommendations

No concentrations of COCs were detected at concentrations exceeding Construction or Excavation Worker RBCs in the samples collected from the west end of the Burnside Bridge. Several of the soil samples collected from the west end of the Bridge contained metals and petroleum constituents at concentrations exceeding Clean Fill Criteria; however, the factor of exceedance in many cases was less than an order of magnitude. Samples collected from bulk spoils material at the time of construction may meet Clean Fill Criteria.

Lead was detected at concentrations exceeding the Clean Fill Criteria in the samples collected from borings B-16, B-17, and boring B-18 on the east side of the bridge. No lead concentrations exceeded the direct contact RBCs for the Construction or Excavation Worker scenarios; however, because lead concentrations in 4 samples exceeded 100 mg/kg, those samples were submitted for additional lead analysis TCLP. Results of the samples submitted for TCLP analysis were all less than 5 mg/L and indicate that the material would not require disposal as hazardous waste. Soils in this area will need to be disposed of as special waste.

The only upland soil sample containing concentrations of any analyzed constituent that exceeded the direct contact RBCs was the soil sample collected from boring B-33 from 15 to 16.5 feet bgs. This sample interval was observed to have free petroleum product during drilling, and laboratory analytical results of diesel and residual-range organics in the sample both exceed the Construction Worker direct contact RBC of 4,600 mg/kg, at 27,400 mg/kg and 26,000 mg/kg, respectively. Soils from this area will require special management, including worker safety precautions, and should be segregated and managed separately for disposal purposes. A Contaminated Media Management Plan is recommended for soils on the eastern end of the bridge.

7.2 Groundwater Recommendations

No groundwater concentrations of COCs exceeded RBCs for groundwater in excavations or daily discharge maximum local limits for the City of Portland in any of the groundwater samples collected from upland or in-water borings; however, no groundwater sample was collected from boring B-33, where free petroleum product was observed. There does not appear to be a discharge limit for diesel-range organics imposed by the City of Portland, nor is there an RBC established for diesel-range organics for the groundwater in an excavation exposure scenario. If dewatering is necessary in this area, groundwater samples from the purged water should be collected to determine appropriate disposal options.

7.3 Sediment Recommendations

Analytical results of sediment samples collected indicate that one or more COC was detected at a level exceeding Clean Fill Criteria in 10 of the 12 borings completed within the Willamette River. The most common analytes detected at concentrations exceeding Clean Fill Criteria were arsenic, mercury, lead, phthalates, dibenzofuran, PAHs and PCBs. No analytes were detected at concentrations exceeding DEQ RBCs for the Construction or Excavation Worker direct contact scenarios, so there is no excess risk posed to construction or excavation workers due to exposure to sediments during Project construction.

Although in-water boring B-38 was not completed as planned due to site access issues, this does not appear to be a significant data gap. We compared the sediment analytical data for the samples collected from borings B-39 (directly upstream from planned boring B-38), B-37 (west of B-39) and B-36 (downstream of B-37). In general, analyte concentrations in samples collected from the three borings were very similar (Table 4). For TPH, VOCs, PAHs and SVOCs, concentrations detected in samples collected from boring B-37 were generally lower than those collected from boring B-36 from the same depth interval (i.e., comparing the 0-10 feet composite samples and the 10-plus feet below surface samples separately), and concentrations detected in the samples collected from borings B-36 and B-39 were the most similar. Conversely, concentrations of metals, dioxins/furans and PCBs were generally higher in the samples collected from boring B-37 than in those collected from borings B-36 or B-39. PCBs were only detected in the sample collected from boring B-37 from 0-10 feet below the sediment interface. The concentrations of butyltins, organochlorine pesticides and chlorinated herbicides were all similar between the sample locations.

7.3.1 Sediment Disposal

There are two substantive differences between sediments and soil when it comes to evaluating disposal:

- Under the Solid Waste rules, there is an exemption for soil and soil-like materials. Soil can be used as fill and there is a presumption that it is not solid waste (this is the basis of DEQ's Clean Fill determination guidance). With dredged sediments; however, DEQ presumes that dredged sediments are solid waste until proven otherwise. There are multiple COCs exceeding Clean Fill Criteria with maximum exceedance ratios up to 30 (concentration detected/Clean Fill Criteria = exceedance ratio). Among the average concentrations for COCs with at least one exceedance, there are five COCs that the average concentration exceeds the Clean Fill Criteria. The ratio of the average of these

concentrations to the Clean Fill Criteria for each is as follows: MCPA (6), MCPP (5), dibenzofuran (3), dioxins/furans TEQ (2), and BEHP (1.4).

Based on the above calculations, it appears the material could potentially be used as Clean Fill, especially if the material will be mixed with a large quantity of deeper, less-impacted material by the time it reaches its end use. For COCs that exceed Clean Fill Criteria, the proposed use for the material and the basis for the associated Clean Fill numbers will need to be reviewed to ensure the material is not used in a manner that could result in an exposure to a critical receptor. For example, if the basis for the Clean Fill Criteria for a particular COC is residential human health, as long as the material is not used for fill in residential setting, that COC would not be a concern.

- The other substantial difference between soil and sediment disposal considerations is the need for dewatering. Prior to transport (whether to landfill or for re-use as fill), the sediments will need to be dewatered. The water would require appropriate handling, testing, and/or treatment as needed per requirements of the dredging permit.

7.3.2 Portland Harbor Impact Discussion

Based on the following, disturbance of sediment during construction at the Project Site should have no substantive impact on Portland Harbor.

- The site is not within Portland Harbor.
- There was only one Remedial Action Level (RAL)¹ exceedance (PCBs detected at a concentration of 0.079 mg/kg in the sample collected from boring B-34 from 0-10 feet bgs, which slightly exceeds the RAL of 0.075 mg/kg). The exceedance was detected in the sample collected from boring B-34 which is not located near a bridge pier. All of the COCs in samples collected from borings completed near piers are below RALs.
- The primary concern for COCs detected in sediment would be related to suspended solid migration from the construction work. Loss of sediment during construction will be controlled by permit requirements, so residuals escaping downriver will be limited. This would be best reflected by average concentrations. Only four COCs had average concentrations above the CUL, and three of those were only slightly above (arsenic; 2,3,7,8-TCDF and total PCBs all had exceedance ratios of 1.1). The fourth was dieldrin where the average exceeded the CUL by 6 times (a conservative estimate based on calculating the average using the detection limits – the exceedance factor is closer to 3 using ½ detection limit).
- The CULs won't be achieved in Portland Harbor for decades of natural recovery. Therefore, minor impacts now would have no real impact on achieving CULs eventually.
- There would be significant dispersion of the limited residuals from the construction, so impacts in Portland Harbor would be negligible.

¹ The RAL is the concentration that requires active remediation in PH. Concentrations below that value will achieve cleanup via natural recovery.

7.3.3 Bridge Design Potential for Scouring

We understand that bridge components that may be evaluated during the design phase for the Project may result in sediment scour. The COC concentrations detected within the Project area are generally much lower than those detected within the Portland Harbor Superfund Site. Given that most of Portland Harbor will achieve CULs only after decades of natural recovery, chemical impacts from the bridge scour to downstream sediments would likely be negligible. If a specific design will result in sediment scour, we recommend environmental sampling in the expected scour zone to characterize the sediments that would get scoured.

7.3.4 Sediment Dewatering Additional Considerations

There are a number of COCs that were detected in groundwater samples collected from borings in the river that exceed Portland Harbor surface water to groundwater CULs:

<u>COC</u>	<u>Exceedance Factor</u>
cPAHs	3,500
BEHP	5
Dioxin TEQ	40,000
Dissolved lead	5
Chlordanes	15
DDT	300
MCPP	2

Some of these CULs are based on long-term human cancer risk (e.g., cPAHs, dioxins, DDT) so are not directly applicable to discharge events. Additionally, these same COCs are likely associated with suspended solids so would be mostly removed by treatment of turbidity. Although it is unlikely that dewatering discharge to the river would be permitted, and it is expected the Project would be designed to discharge to the sewer, it is unlikely that an accidental discharge to the river would have any long-term impact.

- Notes:**
1. mg/kg = Milligrams per kilogram.
 2. bgs = Below ground surface.
 3. -- = Value not available.
 4. Bold values indicate the analyte was detected above method detection limits.
 5. Clean Fill Criteria from the Oregon Department of Environmental Quality (DEQ) Clean Fill Determinations (updated June 17, 2019).
 6. Soil Maximum Concentrations for TCLP from 40 CFR 261.24, multiplied by 20 to account for dilution performed during TCLP extraction.
 7. Oregon DEQ RBCs from the Oregon Department of Environmental Quality (DEQ) Risk-Based Concentrations (RBCs) for Individual Chemicals (updated May 2018).
 8. Shaded values indicate the analyte was detected above one or more applicable screening levels.
 9. U = Analyte was not detected above the reported method detection limit.
 10. J = Result is an estimated value.
 11. UJ = Analyte was not detected; however, the reported method detection limit may be inaccurate or imprecise.
 12. J+ = Result is an estimated value that may be biased high.

Notes:

1. mg/L = Milligrams per liter.
2. bgs = Below ground surface.
3. -- = Value not available.
4. Bold values indicate the analyte was detected above method detection limits.
5. Red sample IDs indicate that the sample exceeds hazardous waste limits.
6. Shaded values indicate the analyte was detected above one or more applicable screening levels.
7. U = Analyte was not detected above the reported method detection limit.

Notes:

1. µg/L = Micrograms per liter.
2. -- = Value not available.
3. Bold values indicate the analyte was detected above method detection limits.
4. Oregon DEQ RBCs from the Oregon Department of Environmental Quality (DEQ) Risk-Based Concentrations (RBCs) for Individual Chemicals (updated May 2018).
5. Daily Discharge Maximum Local Limits from the City of Portland Bureau of Environmental Services, Sanitary Discharge and Pretreatment Program Administrative Rules (ENB - 4.03), June 2016.
6. Shaded values indicate the analyte was detected above the Oregon DEQ Clean Fill Criteria.
7. U = Analyte was not detected above the reported method detection limit.
8. UJ = Analyte was not detected; however, the reported method detection limit may be inaccurate or imprecise.
9. J = Result is an estimated value.
10. J- = Result is an estimated value that may be biased low.

Notes:

- µg/L = Micrograms per liter.
- pg/L = Picograms per liter.
- = Value not available.
- Bold values indicate the analyte was detected above method detection limits.
- Oregon DEQ RBCs from the Oregon Department of Environmental Quality (DEQ) Risk-Based Concentrations (RBCs) for Individual Chemicals (updated May 2018).
- Daily Discharge Maximum Local Limits from the City of Portland Bureau of Environmental Services, Sanitary Discharge and Pretreatment Program Administrative Rules (ENB - 4.03), July 2019..
- Shaded values indicate the analyte was detected above the Oregon DEQ Clean Fill Criteria.
- U = Analyte was not detected above the reported method detection limit.
- UJ = Analyte was not detected; however, the reported method detection limit may be inaccurate or imprecise.
- J = Result is an estimated value.
- J+ = Result is an estimated value that may be biased high.
- NJ+ = The analyte was tentatively identified and did not meet method criteria for confirmation. The reported concentration is also an estimated concentration that may be biased high.
- NJ = The analyte was tentatively identified and did not meet method criteria for confirmation.
- J- = Result is an estimated value that may be biased low.

Notes:

1. mg/kg = Milligrams per kilogram.
2. IDW = Investigation Derived Waste
3. -- = Value not available.
4. Bold values indicate the analyte was detected above method detection limits.
5. Clean Fill Criteria from the Oregon Department of Environmental Quality (DEQ) Clean Fill Determinations (updated June 17, 2019).
6. Soil Maximum Concentrations for TCLP from 40 CFR 261.24, multiplied by 20 to account for dilution performed during TCLP extraction.
7. Oregon DEQ RBCs from the Oregon Department of Environmental Quality (DEQ) Risk-Based Concentrations (RBCs) for Individual Chemicals (updated May 2018).
8. Shaded values indicate the analyte was detected above one or more applicable screening levels.
9. U = Analyte was not detected above the reported method detection limit.
10. J = Result is an estimated value.

Notes:

1. mg/kg = Milligrams per kilogram.
2. ng/kg = Nanograms per kilogram.
3. bgs = Below ground surface.
4. -- = Value not available.
5. Bold values indicate the analyte was detected above method detection limits.
6. Clean Fill Criteria from the Oregon Department of Environmental Quality (DEQ) Clean Fill Determinations (updated June 17, 2019).
7. Soil Maximum Concentrations for TCLP from 40 CFR 261.24, multiplied by 20 to account for dilution performed during TCLP extraction.
8. Freshwater Benthic Toxicity Screening Levels from the Sediment Evaluation Framework for the Pacific Northwest (updated May 2018).
9. CUL = Cleanup Levels from the Portland Harbor Superfund Site Record of Decision for Riverbank Soil, Table 17 January 2020 Errata #2 update, (ROD, 2017).
10. Willamette River Upstream Background Concentrations from the Portland Harbor RI/FS (2016).
11. Oregon DEQ RBCs from the Oregon Department of Environmental Quality (DEQ) Risk-Based Concentrations (RBCs) for Individual Chemicals (updated May 2018).
12. Shaded values indicate the analyte was detected above one or more applicable screening levels.
13. U = Analyte was not detected above the reported method detection limit.
14. J = Result is an estimated value.
15. UJ = Analyte was not detected; however, the reported method detection limit may be inaccurate or imprecise.
16. J+ = Result is an estimated value that may be biased high.
17. NJ = The analyte was tentatively identified and did not meet method criteria for confirmation.

NOTES

- Ground surface based on file EQRB_PMX_TS_IWS2_ROADWAY_ALIGNMENT_PROFILE_ARCH.dwg, downloaded from Project Wise on August 30, 2021, and modified with field measurements.
- Existing bridge features from file EQRB_PMX_TS_IWS2_ROADWAY_ALIGNMENT_PROFILE_CABLE.dwg, downloaded from Project Wise on January 13, 2022.
- This profile was generalized from materials as observed in current borings and reported in historic boring logs. Variations may exist between profile and actual conditions. See geotechnical report for complete boring logs and explanations of symbols.
- Borings performed by Shannon & Wilson, Inc. in 2016 and 2021 were located using a handheld GPS and measurements to existing features. All other boring locations were approximated based on information available in historic reports and boring logs (some by others). All boring elevations are approximate.
- Proposed bridge features adapted from files downloaded from ProjectWise on January 7, 2022.

RE: A1H0845 - EQRB - CB319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A1H0845, which was received by the laboratory on 8/23/2021 at 12:30:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 4.7 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- COMP** Sample is a composite of discrete samples. See prep information for details.
- F-03** The result for this hydrocarbon range is elevated due to the presence of individual analyte peaks in the quantitation range that are not representative of the fuel pattern reported.
- F-12** The result for this hydrocarbon range is primarily due to the presence of individual analyte peaks in the quantitation range. No fuel pattern detected.
- H-06** This sample was received, or the analysis requested, outside the recommended holding time.
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-05** Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-19** Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +10%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +135%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +15%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +40%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +5%. The results are reported as Estimated Values.
- Q-54e** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +57%. The results are reported as Estimated Values.
- Q-54f** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +7%. The results are reported as Estimated Values.
- Q-54g** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +9%. The results are reported as Estimated Values.
- Q-54h** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -2%. The results are reported as Estimated Values.
- Q-54i** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -4%. The results are reported as Estimated Values.

<u>Coles & Betts Environmental Consulting</u>	Project: <u>EQRB</u>	<u>Report ID:</u>
5741 NE Flanders Street	Project Number: CB319	A1H0845 - 10 06 21 1038
Portland, OR 97213	Project Manager: Jill Betts	

- Q-54j** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -6%. The results are reported as Estimated Values.
- Q-55** Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260, however there is adequate sensitivity to ensure detection at the reporting level.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- RSM** RSM Preparation Blank. Batch: 1080623.
- S-03** Reextraction and analysis, or analysis of laboratory duplicate, confirms surrogate failure due to sample matrix effect.
- TCLP** This batch QC sample was prepared with TCLP or SPLP fluid from preparation batch 1090321.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: CB319 Project Manager: Jill Betts	Report ID: A1H0845 - 10 06 21 1038
-----------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.
- "dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- "wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A1H0845 - 10 06 21 1038).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Table header with columns: Matrix, Analysis, TNI_ID, Analyte, TNI_ID, Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation. Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provided by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

Date/time received: 8/23/11 @ 1230 By: AKC
Delivered by: Apex Client ESS FedEx UPS Swift Senvoy SDS Other

Cooler Inspection Date/time inspected: 8/23/11 @ 1235 By: AKC

Chain of Custody included? Yes No Custody seals? Yes No

Signed/dated by client? Yes No

Signed/dated by Apex? Yes No

	Cooler #1	Cooler #2	Cooler #3	Cooler #4	Cooler #5	Cooler #6	Cooler #7
Temperature (°C)	<u>4.7</u>						
Received on ice? (Y/N)	<u>Y</u>						
Temp. blanks? (Y/N)	<u>Y</u>						
Ice type: (Gel/Real/Other)	<u>Gel</u>						
Condition:	<u>Melty</u>						

Cooler out of temp? (Y/N) Possible reason why: _____
Green dots applied to out of temperature samples? Yes No
Out of temperature samples form initiated? Yes No

Sample Inspection: Date/time inspected: 8/23/11 @ 945 By: (Signature)

All samples intact? Yes No Comments: _____

Bottle labels/COCs agree? Yes No Comments: _____

COC/container discrepancies form initiated? Yes No

Containers/volumes received appropriate for analysis? Yes No Comments: _____

Do VOA vials have visible headspace? Yes No NA

Comments: sed in all voas

Water samples: pH checked: Yes No NA pH appropriate? Yes No NA

Comments: 1/2 HCl ambers B-17 pH ≈ 7, 1/2 ambers too full to preserve

RE: A1H0847 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A1H0847, which was received by the laboratory on 8/23/2021 at 12:30:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 4.7 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- COMP** Sample is a composite of discrete samples. See prep information for details.
- H-06** This sample was received, or the analysis requested, outside the recommended holding time.
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-05** Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +10%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +135%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +57%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +7%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -4%. The results are reported as Estimated Values.
- Q-54e** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -6%. The results are reported as Estimated Values.
- Q-55** Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260, however there is adequate sensitivity to ensure detection at the reporting level.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- RSM** RSM Preparation Blank. Batch: 1080623.
- S-05** Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
- TCLP** This batch QC sample was prepared with TCLP or SPLP fluid from preparation batch 1090321.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A1H0847 - 10 06 21 1044
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.
- " dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- " wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A1H0847 - 10 06 21 1044).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Table header with columns: Matrix, Analysis, TNI_ID, Analyte, TNI_ID, Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation. Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provided by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A1H0964 - EQRB - CB319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A1H0964, which was received by the laboratory on 8/27/2021 at 12:55:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler#1 6.4 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- COMP** Sample is a composite of discrete samples. See prep information for details.
- F-11** The hydrocarbon pattern indicates possible weathered diesel, mineral oil, or a contribution from a related component.
- H-06** This sample was received, or the analysis requested, outside the recommended holding time.
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-05** Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-04** Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-16** Reanalysis of an original Batch QC sample.
- Q-19** Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +11%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +13%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +17%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +18%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +2%. The results are reported as Estimated Values.
- Q-54e** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +33%. The results are reported as Estimated Values.
- Q-54f** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +4%. The results are reported as Estimated Values.
- Q-54g** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +5%. The results are reported as Estimated Values.
- Q-54h** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +6%. The results are reported as Estimated Values.
- Q-54i** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +8%. The results are reported as Estimated Values.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u>	Project: <u>EQRB</u>	<u>Report ID:</u>
5741 NE Flanders Street	Project Number: CB319	A1H0964 - 10 06 21 1501
Portland, OR 97213	Project Manager: Jill Betts	

- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- Q-58** Matrix Spike Duplicate QC Sample is actually a Serial Dilution of the Matrix Spike. Reported as MSD for calculation purposes only.
- TCLP** This batch QC sample was prepared with TCLP or SPLP fluid from preparation batch 1091061.
- TCLPa** Limited sample volume. Leachate was prepared using less than the recommended amount of sample per EPA 1311 or 1312. To maintain consistency in leaching, the standard ratio of sample to leachate fluid was maintained.
- TEMP** Sample(s) received outside of recommended temperature. See Case Narrative.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: CB319 Project Manager: Jill Betts	Report ID: A1H0964 - 10 06 21 1501
-----------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.
- "dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- "wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Darrell Auvil, Client Services Manager

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A1H0964 - 10 06 21 1501)

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

RE: A1H1020 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A1H1020, which was received by the laboratory on 8/31/2021 at 12:14:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 5.8 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- COMP Sample is a composite of discrete samples. See prep information for details.
- F-03 The result for this hydrocarbon range is elevated due to the presence of individual analyte peaks in the quantitation range that are not representative of the fuel pattern reported.
- J Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-05 Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- Q-01 Spike recovery and/or RPD is outside acceptance limits.
- Q-04 Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-05 Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-16 Reanalysis of an original Batch QC sample.
- Q-54 Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +12%. The results are reported as Estimated Values.
- Q-54a Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +13%. The results are reported as Estimated Values.
- Q-54b Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +18%. The results are reported as Estimated Values.
- Q-54c Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +2%. The results are reported as Estimated Values.
- Q-54d Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +25%. The results are reported as Estimated Values.
- Q-54e Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +3%. The results are reported as Estimated Values.
- Q-54f Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +5%. The results are reported as Estimated Values.
- Q-56 Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- R-02 The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
- V-15 Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A1H1020 - 10 06 21 1050
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.
- " dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- " wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Darrell Auvil, Client Services Manager

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A1H1020 - 10 06 21 1050).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Table header with columns: Matrix, Analysis, TNI_ID, Analyte, TNI_ID, Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation. Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provided by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A110084 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A110084, which was received by the laboratory on 9/2/2021 at 8:25:00AM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler#1 5.8 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- C-07** Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
- COMP** Sample is a composite of discrete samples. See prep information for details.
- F-13** The chromatographic pattern does not resemble the fuel standard used for quantitation
- F-15** Results for diesel are estimated due to overlap from the reported oil result.
- F-16** Results for oil are estimated due to overlap from the reported diesel result.
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
 - J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-04** Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-16** Reanalysis of an original Batch QC sample.
- Q-17** RPD between original and duplicate sample is outside of established control limits.
- Q-29** Recovery for Lab Control Spike (LCS) is above the upper control limit. Data may be biased high.
- Q-31** Estimated Results. Recovery of Continuing Calibration Verification sample below lower control limit for this analyte. Results are likely biased low.
- Q-41** Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.
- Q-42** Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
- Q-52** Due to known erratic recoveries, the result and reporting levels for this analyte are reported as Estimated Values. This analyte may not have passed all QC requirements for this method.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +12%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +123%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +3%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +52%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -10%. The results are reported as Estimated Values.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<p><u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213</p>	<p>Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts</p>	<p style="text-align: right;"><u>Report ID:</u> A110084 - 10 06 21 1244</p>
--------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------

- Q-54e** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -4%. The results are reported as Estimated Values.
- Q-54f** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -6%. The results are reported as Estimated Values.
- Q-55** Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260, however there is adequate sensitivity to ensure detection at the reporting level.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- R-02** The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
- S-01** Surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference.
- S-03** Reextraction and analysis, or analysis of laboratory duplicate, confirms surrogate failure due to sample matrix effect.
- S-05** Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
- S-08** TPH-Gx Surrogate recovery cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract. See 8260 results for accurate Surrogate recovery.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110084 - 10 06 21 1244
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.
- " dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- " wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Darrell Auvil, Client Services Manager

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A110084 - 10 06 21 1244).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

Apex Laboratories

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) -
EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation
--------	----------	--------	---------	--------	---------------

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation. Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provided by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

APEX LABS COOLER RECEIPT FORM

Client: Coles + Betts Environmental Consulting, LLC Element WO#: A1 T0084

Project/Project #: EQRB | 319

Delivery Info:
 Date/time received: 9/2/21 @ 825 By: SO
 Delivered by: Apex Client ESS FedEx UPS Swift Senvoy SDS Other

Cooler Inspection Date/time inspected: 9/2/21 @ 825 By: SO

Chain of Custody included? Yes No Custody seals? Yes No

Signed/dated by client? Yes No

Signed/dated by Apex? Yes No

	Cooler #1	Cooler #2	Cooler #3	Cooler #4	Cooler #5	Cooler #6	Cooler #7
Temperature (°C)	<u>5.8</u>						
Received on ice? (Y/N)	<u>Y</u>						
Temp. blanks? (Y/N)	<u>N</u>						
Ice type: (Gel/Real/Other)	<u>gel</u>						
Condition:	<u>good</u>						

Cooler out of temp? (Y/N) Possible reason why: _____
 Green dots applied to out of temperature samples? Yes No
 Out of temperature samples form initiated? Yes No

Sample Inspection: Date/time inspected: 9/2/21 @ 1711 By: JS

All samples intact? Yes No Comments: _____

Bottle labels/COCs agree? Yes No Comments: _____

COC/container discrepancies form initiated? Yes No

Containers/volumes received appropriate for analysis? Yes No Comments: _____

Do VOA vials have visible headspace? Yes No NA

Comments: _____

Water samples: pH checked: Yes No NA pH appropriate? Yes No NA

Comments: _____

RE: A110192 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A110192, which was received by the laboratory on 9/7/2021 at 2:23:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 13.7 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- COMP** Sample is a composite of discrete samples. See prep information for details.
- F-03** The result for this hydrocarbon range is elevated due to the presence of individual analyte peaks in the quantitation range that are not representative of the fuel pattern reported.
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-04** Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-19** Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +1%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +12%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +13%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +14%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +21%. The results are reported as Estimated Values.
- Q-54e** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +22%. The results are reported as Estimated Values.
- Q-54f** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +3%. The results are reported as Estimated Values.
- Q-54g** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +30%. The results are reported as Estimated Values.
- Q-54h** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +4%. The results are reported as Estimated Values.
- Q-54i** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +5%. The results are reported as Estimated Values.
- Q-54j** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -2%. The results are reported as Estimated Values.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: **OR100062**

<p><u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213</p>	<p>Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts</p>	<p style="text-align: right;"><u>Report ID:</u> A110192 - 10 06 21 1131</p>
--------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------

- Q-55** Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260, however there is adequate sensitivity to ensure detection at the reporting level.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- R-02** The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
- S-05** Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
- S-06** Surrogate recovery is outside of established control limits.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

Apex Laboratories

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110192 - 10 06 21 1131
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.
- " dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- " wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Darrell Auvil, Client Services Manager

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A110192 - 10 06 21 1131).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A110192 - 10 06 21 1131).

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Table header with columns: Matrix, Analysis, TNI_ID, Analyte, TNI_ID, Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation. Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provided by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A110276 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A110276, which was received by the laboratory on 9/9/2021 at 2:08:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1	4.8 degC

-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- F-11** The hydrocarbon pattern indicates possible weathered diesel, mineral oil, or a contribution from a related component.
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-05** Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-03** Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-17** RPD between original and duplicate sample is outside of established control limits.
- Q-19** Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- Q-24** The RPD for this spike and spike duplicate is above established control limits. Recoveries for both the spike and spike duplicate are within control limits.
- Q-29** Recovery for Lab Control Spike (LCS) is above the upper control limit. Data may be biased high.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +12%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +16%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +19%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +2%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +20%. The results are reported as Estimated Values.
- Q-54e** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +25%. The results are reported as Estimated Values.
- Q-54f** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +3%. The results are reported as Estimated Values.
- Q-54g** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +30%%. The results are reported as Estimated Values.
- Q-54h** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +32%. The results are reported as Estimated Values.

503-718-2323
ORELAP ID: OR100062

Coles & Betts Environmental Consulting 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110276 - 10 06 21 1150
----------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

- Q-54i** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +4%. The results are reported as Estimated Values.
- Q-54j** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +5%. The results are reported as Estimated Values.
- Q-54k** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +7%. The results are reported as Estimated Values.
- Q-54l** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -4%. The results are reported as Estimated Values.
- Q-54m** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -8%. The results are reported as Estimated Values.
- Q-55** Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260, however there is adequate sensitivity to ensure detection at the reporting level.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- R-02** The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
- S-01** Surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference.
- S-05** Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110276 - 10 06 21 1150
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.
- "dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- "wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A110276 - 10 06 21 1150).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

RE: A110449 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A110449, which was received by the laboratory on 9/14/2021 at 1:28:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 4.7 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- A-01** 5x dilution prepared for reduced MRL. Arsenic that appear here between the MDL and MRL is less than the MDL of any associated samples.
- COMP** Sample is a composite of discrete samples. See prep information for details.
- H-02** This sample was extracted outside of the recommended holding time.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-04** Due to matrix interference, this analyte cannot be accurately quantified. The reported result may contain a high bias.
- M-05** Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-04** Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-39** Results for sample duplicate are significantly higher than the sample results. See duplicate results in QC section of the report.
- Q-42** Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +1%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +16%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +18%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +2%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +9%. The results are reported as Estimated Values.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- S-05** Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110449 - 10 06 21 1200
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.
- " dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- " wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110449 - 10 06 21 1200
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) -
EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation
--------	----------	--------	---------	--------	---------------

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation. Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provided by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A110581 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A110581, which was received by the laboratory on 9/16/2021 at 5:00:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler#1 1.8 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

ANALYTICAL CASE NARRATIVE

Work Order: A110581

NWTPH-Dx Data Note-

Sample B7 (Apex ID: A110581-06) was re-extracted due to failing surrogate. The re-extract passed surrogate recovery limits but the original extraction is being reported with qualification due to the presence of an Oil hit not detected in the re-extraction.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- COMP** Sample is a composite of discrete samples. See prep information for details.
- F-03** The result for this hydrocarbon range is elevated due to the presence of individual analyte peaks in the quantitation range that are not representative of the fuel pattern reported.
- F-11** The hydrocarbon pattern indicates possible weathered diesel, mineral oil, or a contribution from a related component.
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-05** Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-02** Spike recovery is outside of established control limits due to matrix interference.
- Q-03** Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
- Q-04** Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-17** RPD between original and duplicate sample is outside of established control limits.
- Q-19** Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- Q-41** Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +1%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +12%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +13%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +16%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +2%. The results are reported as Estimated Values.
- Q-54e** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +25%. The results are reported as Estimated Values.
- Q-54f** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +28%. The results are reported as Estimated Values.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<p><u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213</p>	<p>Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts</p>	<p style="text-align: right;"><u>Report ID:</u> A110581 - 11 03 21 1516</p>
--------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------

- Q-54g** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +35%. The results are reported as Estimated Values.
- Q-54h** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +5%. The results are reported as Estimated Values.
- Q-54i** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +51%. The results are reported as Estimated Values.
- Q-54j** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +6%. The results are reported as Estimated Values.
- Q-54k** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +7%. The results are reported as Estimated Values.
- Q-54l** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -8%. The results are reported as Estimated Values.
- Q-55** Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260, however there is adequate sensitivity to ensure detection at the reporting level.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- S-03** Reextraction and analysis, or analysis of laboratory duplicate, confirms surrogate failure due to sample matrix effect.
- S-06** Surrogate recovery is outside of established control limits.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.
- X** See Case Narrative.

Apex Laboratories

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110581 - 11 03 21 1516
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.
- "dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- "wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to 1/2 the Reporting Limit (RL).
-For Blank hits falling between 1/2 the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A110581 - 11 03 21 1516).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Table header with columns: Matrix, Analysis, TNI_ID, Analyte, TNI_ID, Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation. Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provided by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A110712 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A110712, which was received by the laboratory on 9/21/2021 at 11:15:00AM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 1.9 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- COMP** Sample is a composite of discrete samples. See prep information for details.
- F-11** The hydrocarbon pattern indicates possible weathered diesel, mineral oil, or a contribution from a related component.
- F-13** The chromatographic pattern does not resemble the fuel standard used for quantitation
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-05** Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-02** Spike recovery is outside of established control limits due to matrix interference.
- Q-03** Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
- Q-04** Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-16** Reanalysis of an original Batch QC sample.
- Q-19** Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- Q-41** Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +12%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +14%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +15%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +18%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +2%. The results are reported as Estimated Values.
- Q-54e** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +21%. The results are reported as Estimated Values.
- Q-54f** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +27%. The results are reported as Estimated Values.

- Q-54g** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +3%. The results are reported as Estimated Values.
- Q-54h** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +34%. The results are reported as Estimated Values.
- Q-54i** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +36%. The results are reported as Estimated Values.
- Q-54j** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +37%. The results are reported as Estimated Values.
- Q-54k** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +45%. The results are reported as Estimated Values.
- Q-54l** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +5%. The results are reported as Estimated Values.
- Q-54m** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -1%. The results are reported as Estimated Values.
- Q-54n** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -2%. The results are reported as Estimated Values.
- Q-54o** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -6%. The results are reported as Estimated Values.
- Q-55** Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260, however there is adequate sensitivity to ensure detection at the reporting level.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- R-02** The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
- S-05** Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
- S-06** Surrogate recovery is outside of established control limits.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110712 - 11 03 21 1522
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.
- " dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- " wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A110712 - 11 03 21 1522)

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

RE: A110804 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A 110804, which was received by the laboratory on 9/22/2021 at 2:19:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 5.4 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- B-02** Analyte detected in an associated blank at a level between one-half the MRL and the MRL. (See Notes and Conventions below.)
- COMP** Sample is a composite of discrete samples. See prep information for details.
- FILT1** Sample was lab filtered and acid preserved prior to analysis. See sample preparation section of report for date and time of filtration.
- FILT3** This is a laboratory filtration blank, associated with filtration batch 1090970. See Prep page of report for associated samples.
- ICV-01** Estimated Result. Initial Calibration Verification (ICV) failed high. There is no effect on non-detect results.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-02** Spike recovery is outside of established control limits due to matrix interference.
- Q-04** Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-16** Reanalysis of an original Batch QC sample.
- Q-19** Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- Q-22** Due to limited sample volume or hold time restraints, the NWTPH-Dx extract was used for the 8270 SIM PAH analysis. Therefore no PAH Surrogates and/or Batch QC results are available. Results are Estimated Values.
- Q-41** Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +14%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +15%. The results are reported as Estimated Values.
- Q-54b** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +2%. The results are reported as Estimated Values.
- Q-54c** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +34%. The results are reported as Estimated Values.
- Q-54d** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by -1%. The results are reported as Estimated Values.
- Q-55** Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260, however there is adequate sensitivity to ensure detection at the reporting level.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- R-04** Reporting levels elevated due to preparation and/or analytical dilution necessary for analysis.
- S-05** Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.

503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A110804 - 11 03 21 1528
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.
- " dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- " wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Darrell Auvil, Client Services Manager

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A110804 - 11 03 21 1528).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

RE: A111015 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A111015, which was received by the laboratory on 9/27/2021 at 4:06:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 3.9 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

- B-02** Analyte detected in an associated blank at a level between one-half the MRL and the MRL. (See Notes and Conventions below.)
- COMP** Sample is a composite of discrete samples. See prep information for details.
- E** Estimated Value. The result is above the calibration range of the instrument.
- F-11** The hydrocarbon pattern indicates possible weathered diesel, mineral oil, or a contribution from a related component.
- J** Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
- M-02** Due to matrix interference, this analyte cannot be accurately quantified. The reported result is estimated.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-02** Spike recovery is outside of established control limits due to matrix interference.
- Q-03** Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
- Q-04** Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-54** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +12%. The results are reported as Estimated Values.
- Q-54a** Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260/8270 by +6%. The results are reported as Estimated Values.
- Q-56** Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260
- R-02** The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
- R-04** Reporting levels elevated due to preparation and/or analytical dilution necessary for analysis.
- S-03** Reextraction and analysis, or analysis of laboratory duplicate, confirms surrogate failure due to sample matrix effect.
- V-15** Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Darrell Auvil, Client Services Manager

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

<u>Coles & Betts Environmental Consulting</u> 5741 NE Flanders Street Portland, OR 97213	Project: <u>EQRB</u> Project Number: 319 Project Manager: Jill Betts	Report ID: A111015 - 11 03 21 1533
-----------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------	-----------------------------------------------------

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

- DET Analyte DETECTED at or above the detection or reporting limit.
- ND Analyte NOT DETECTED at or above the detection or reporting limit.
- NR Result Not Reported
- RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

- Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.
- " dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.
- " wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
- " " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

- " --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
- " *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL REPORT

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
ORELAP ID: OR100062

Table with 3 columns: Client (Coles & Betts Environmental Consulting), Project (EQRB), and Report ID (A111015 - 11 03 21 1533).

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation. Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provided by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

APEX LABS COOLER RECEIPT FORM

Client: Coles + Betts Environmental Consulting Element WO#: A1 I1015

Project/Project #: EQRB/319

Delivery Info:
 Date/time received: 9/27/21 @ 16:06 By: JAG
 Delivered by: Apex Client ESS FedEx UPS Swift Senvoy SDS Other

Cooler Inspection Date/time inspected: 9/27/21 @ 16:06 By: JAG
 Chain of Custody included? Yes No Custody seals? Yes No
 Signed/dated by client? Yes No
 Signed/dated by Apex? Yes No

	Cooler #1	Cooler #2	Cooler #3	Cooler #4	Cooler #5	Cooler #6	Cooler #7
Temperature (°C)	<u>3.9</u>						
Received on ice? (Y/N)	<u>Y</u>						
Temp. blanks? (Y/N)	<u>N</u>						
Ice type: (Gel/Real/Other)	<u>Gel</u>						
Condition:	<u>good</u>						

Cooler out of temp? (Y/N) Possible reason why: _____
 Green dots applied to out of temperature samples? Yes No
 Out of temperature samples form initiated? Yes No

Sample Inspection: Date/time inspected: 9/27/21 @ 1623 By: MAS
 All samples intact? Yes No Comments: _____

Bottle labels/COCs agree? Yes No Comments: _____

COC/container discrepancies form initiated? Yes No
 Containers/volumes received appropriate for analysis? Yes No Comments: _____

Do VOA vials have visible headspace? Yes No NA
 Comments: _____

Water samples: pH checked: Yes No NA pH appropriate? Yes No NA
 Comments: _____

RE: A1K0258 - EQRB - 319

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A1K0258, which was received by the laboratory on 11/4/2021 at 11:06:00AM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1 1.6 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

Apex Laboratories

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.
