## Envisioning A New Burnside Bridge

Overview Cable Stay Type Tied Arch Type Survey Additional Information

### Bridge Design Concepts

The two east span bridge types under consideration are the cable stay (similar to the Tilikum Crossing) and the tied arch (similar to the Wapato Bridge that connects to Sauvie Island). These two bridge types vary in height, character, materials, views and other characteristics. Below are some key attributes to consider when reviewing the options. Click on each bridge type to learn more about the different sub options.

**Cable Stay Type**
